 - c. the sodium gates are wide open.
 - d. the potassium gates are firmly closed.

ANS: B PTS: 1 DIF: factual REF: The Action Potential

OBJ: 3 TOP: 2.2 The Nerve Impulse

- 165. Where do most action potentials begin?
 - a. in the dendrites
 - b. in the cell body
 - c. at the axon hillock
 - d. at the tip of the axon

ANS: C PTS: 1 DIF: factual REF: Propagation of the

Action Potential OBJ: 4 TOP: 2.2 The Nerve Impulse

- 166. What happens once an action potential starts?
 - a. It is conducted the rest of the way as an electrical current.
 - b. It needs additional stimulation to keep it going along the axon.
 - c. It increases in speed as it goes.
 - d. It is regenerated at other points along the axon.

ANS: D PTS: 1 DIF: factual REF: Propagation of the

Action Potential OBJ: 4 TOP: 2.2 The Nerve Impulse

- 167. What will affect the speed of an action potential?
 - a. the strength of the stimulus
 - b. the time since the last action potential
 - c. the length of the axon
 - d. the resistance of the membrane

ANS: D PTS: 1 DIF: factual REF: Propagation of the

Action Potential OBJ: 4 TOP: 2.2 The Nerve Impulse

MSC: www

- 168. What will NOT affect the speed of an action potential? a. the presence of myelin b. the diameter of the axon c. the length of the axon d. the number of sodium gates ANS: C PTS: 1 DIF: conceptual REF: Propagation of the **Action Potential** OBJ: 4 TOP: 2.2 The Nerve Impulse 169. How is the speed of an action potential down an unmyelinated axon BEST described? a. the speed of electricity, regardless of the size of the axon b. less than 1 meter per second, regardless of the size of the axon c. faster in thin axons than in thick ones d. faster in thick axons than in thin ones ANS: D PTS: 1 DIF: factual REF: The Myelin Sheath and Saltatory Conduction OBJ: 4 TOP: 2.2 The Nerve Impulse 170. The presence of myelin and the diameter of the axon: a. affect the strength and frequency of the stimulus b. affect the speed of an action potential c. affect the strength of an action potential d. affect the frequency of an action potential ANS: B PTS: 1 REF: The Myelin Sheath and DIF: factual Saltatory Conduction OBJ: 4 TOP: 2.2 The Nerve Impulse 171. Which two factors affect the speed of an action potential? a. the strength and frequency of the stimulus b. the location of the cell body and the length of the axon the length and diameter of the axon d. the presence of myelin and the diameter of the axon ANS: D PTS: 1 DIF: factual REF: The Myelin Sheath and Saltatory Conduction OBJ: 4 TOP: 2.2 The Nerve Impulse **KEY: NEW** 172. The function of a myelin sheath is to: a. prevent action potentials from traveling in the wrong direction.
 - b. increase the velocity of transmission along an axon.
 - c. increase the magnitude of an action potential.
 - d. provide a store of nutrients for the neuron.

ANS: B PTS: 1 DIF: factual REF: The Myelin Sheath and Saltatory Conduction OBJ: 4 TOP: 2.2 The Nerve Impulse

- 173. If you were to stub your toe and feel the pressure a second or two before you feel the pain, then which of the following statements is most likely true?
 - a. Pain sensitive neurons are large and myelinated.
 - b. Pain sensitive neurons are longer.
 - c. Pressure sensitive neurons are small and lightly myelinated.
 - d. Pressure sensitive neurons are large and myelinated.

	ANS: D PTS: 1 Saltatory Conduction OBJ: 4		conceptual REF: 2.2 The Nerve Impu	: The Myelin Sheath and alse
174.	What are the nodes of Ranvier a. gates in the membrane tha b. gaps in the myelin sheath c. branching points in an axo d. places where dendrites joi	at admit all ions free	ely	
	ANS: B PTS: 1 Saltatory Conduction OBJ: 4		factual REF.: 2.2 The Nerve Impu	: The Myelin Sheath and alse MSC: www
175.	The myelin sheath is interrupt a. axon gaps b. nodes of Cajal c. axon nodes d. nodes of Ranvier	ed periodically by	short sections of axon of	called:
	ANS: D PTS: 1 Saltatory Conduction OBJ: 4		factual REF : 2.2 The Nerve Impu	: The Myelin Sheath and alse
176.	In a myelinated axon, where a a. in the areas covered by my b. at the nodes of Ranvier c. throughout the axon d. only in the axon hillock	•	undant?	
	ANS: B PTS: 1 Saltatory Conduction OBJ: 4		factual REF : 2.2 The Nerve Impu	The Myelin Sheath and alse
177.	To what does saltatory conduct a. the production of an action b. the transmission of an imp c. the transmission of impuls d. the transmission of an imp	n potential by the noulse along a myeli ses along dendrites	nated axon	ns
	ANS: B PTS: 1 Saltatory Conduction OBJ: 4		factual REF.: 2.2 The Nerve Impu	: The Myelin Sheath and alse
178.	Saltatory conduction the the neuron. a. decreases; decreases b. decreases; increases c. increases; decreases d. increases; increases	·		.

179. How does saltatory conduction affect energy use in a neuron? a. It eliminates the need for action potentials. b. It increases the duration of the refractory period. c. It reduces the frequency of action potentials. d. It reduces the work load for the sodium-potassium pump. ANS: D PTS: 1 DIF: conceptual REF: The Myelin Sheath and Saltatory Conduction OBJ: 4 TOP: 2.2 The Nerve Impulse 180. What disease is related to the destruction of myelin sheaths? multiple sclerosis b. cystic fibrosis c. myasthenia gravis d. Parkinson's disease ANS: A PTS: 1 DIF: factual REF: The Myelin Sheath and Saltatory Conduction OBJ: 4 TOP: 2.2 The Nerve Impulse 181. In what way is a myelinated axon that has lost its myelin (through disease) different from an axon that was never myelinated? a. It has a smaller diameter. b. It lacks sodium gates along parts of its surface. c. It has a longer refractory period. d. It has a much higher threshold. ANS: B PTS: 1 DIF: factual REF: The Myelin Sheath and Saltatory Conduction OBJ: 4 TOP: 2.2 The Nerve Impulse Conduction 182. Multiple sclerosis is one of several: a. blood-brain disorders b. neuron diseases demyelinating diseases d. movement disorders

ANS: C PTS: 1 DIF: factual REF: The Myelin Sheath and Saltatory Conduction OBJ: 4 TOP: 2.2 The Nerve Impulse

- 183. Which of the following is NOT governed by the all-or-none law?
 - a. unmyelinated axons
 - b. myelinated axons
 - c. motor neurons
 - d. local neurons

ANS: D PTS: 1 DIF: factual REF: The Myelin Sheath and Saltatory Conduction OBJ: 4 TOP: 2.2 The Nerve Impulse

Summerly Conduction CDS. 4

- 184. In what direction does a local neuron transmit information?
 - a. through its dendrites to cell body to axon
 - b. through its axon to cell body to dendrites
 - c. only toward the cell body
 - d. equally well in any direction

ANS: D PTS: 1 DIF: factual REF: Local Neurons

OBJ: 5 TOP: 2.2 The Nerve Impulse

185. Which of the following describes the transmission of information in a local neuron?

- a. The signal decreases in strength as it travels.
- b. The signal increases in strength as it travels.
- c. The signal strength remains constant as it travels.
- d. Local neurons do not transmit any information.

ANS: A PTS: 1 DIF: factual REF: Local Neurons

OBJ: 5 TOP: 2.2 The Nerve Impulse

186. Why are local neurons more difficult to study?

- a. There are so few of them that they are difficult to find.
- b. They are so small.
- c. They exist only in humans, so there are ethical considerations.
- d. They die if separated from other neurons.

ANS: B PTS: 1 DIF: factual REF: Local Neurons

OBJ: 5 TOP: 2.2 The Nerve Impulse

187. Which of the following is TRUE of local neurons?

- a. They exchange information with distant neurons.
- b. They abide by the all-or-none principle.
- c. The change in membrane potential increases as it travels.
- d. They have short dendrites and axons.

ANS: D PTS: 1 DIF: factual REF: Local Neurons

OBJ: 5 TOP: 2.2 The Nerve Impulse

188. A local neuron:

- a. has an axon approximately a meter long.
- b. conveys information to other neurons across great distances.
- c. is a small neuron with no axon or a very short one.
- d. has an axon with many branches far from the cell body.

ANS: C PTS: 1 DIF: factual REF: Local Neurons

OBJ: 5 TOP: 2.2 The Nerve Impulse

SHORT ANSWER

1. List the parts of a neuron.

ANS:

Dendrites, a soma (cell body), an axon, and presynaptic terminals.

PTS: 1 DIF: factual REF: Anatomy of Neurons and Glia

OBJ: 1 TOP: 2.1 The Cells of the Nervous System

2. Briefly describe glial cells.

ANS:

They are the other major components of the nervous system. They do not transmit information over long distances as neurons do, although they do exchange chemicals with adjacent neurons.

PTS: 1 DIF: factual REF: Anatomy of Neurons and Glia

OBJ: 2 TOP: 2.1 The Cells of the Nervous System

3. Briefly describe the structure of the blood-brain barrier and why it is important.

ANS:

Tightly joined endothelial cells form the capillary walls in the brain, making the blood-brain barrier. This protects the brain from harmful viruses, bacteria, and chemicals that might otherwise be able to enter the brain and cause damage.

PTS: 1 DIF: factual REF: The Blood-Brain Barrier

OBJ: 3 TOP: 2.1 The Cells of the Nervous System

4. The electrical gradient of a neuron membrane refers to what?

ANS:

A difference in electrical charge between the inside and outside of the cell.

PTS: 1 DIF: conceptual REF: The Resting Potential of the Neuron

OBJ: 1 TOP: 2.1 The Nerve Impulse

5. What would happen to the resting potential if a neuron's membrane was always completely permeable to charged ions?

ANS:

The freedom of movement would allow the ions to equalize on either side of the membrane, causing the resting potential to disappear.

PTS: 1 DIF: conceptual REF: The Resting Potential of the Neuron

OBJ: 1 TOP: 2.1 The Nerve Impulse

6. Briefly describe the all-or-none law of action potentials.

ANS:

Once a neuron reaches the threshold of activation, the action potential is conducted all of the way down the axon without loss of intensity. Furthermore, the magnitude of the action potential is roughly the same every time and is independent of the intensity of the stimulus that initiated it.

PTS: 1 DIF: factual REF: The Action Potential

OBJ: 3 TOP: 2.1 The Nerve Impulse

7. What is saltatory conduction?

ANS:

The jumping of action potentials from node to node.

PTS: 1 DIF: factual REF: The Myelin Sheath and Saltatory Conduction

OBJ: 4 TOP: 2.1 The Nerve Impulse

ESSAY

1. Briefly describe how the brain transports essential chemicals.

ANS:

Answers will vary.

PTS: 1 DIF: factual REF: Anatomy of Neurons and Glia

OBJ: 2 TOP: 2.1 The Cells of the Nervous System

2. Describe the aspects of the resting potential.

ANS:

Answers will vary.

PTS: 1 DIF: factual REF: The Resting Potential of the Neuron

OBJ: 1 TOP: 2.1 The Nerve Impulse

MSC: www

3. Why do neurons have a resting potential?

ANS:

Answers will vary.

PTS: 1 DIF: conceptual REF: The Nerve Impulse OBJ: 6 TOP: 2.2 Nerve Cells and Nerve Impulses

4. Briefly describe the function of voltage-gated channels.

ANS:

Answers will vary.

PTS: 1 DIF: conceptual REF: 41 The Action Potential

OBJ: 3 TOP: 2.1 The Nerve Impulse

MSC: www

5. Briefly describe the refractory period of a neuron.

ANS:

Answers will vary.
