

CHAPTER 2 ANALYZING TRANSACTIONS

DISCUSSION QUESTIONS

1. An account is a form designed to record changes in a particular asset, liability, stockholders' equity, revenue, or expense. A ledger is a group of related accounts.
2. The terms *debit* and *credit* may signify either an increase or a decrease, depending upon the nature of the account. For example, debits signify an increase in asset, expense, and dividends accounts but a decrease in liability, common stock, retained earnings, and revenue accounts.
3.
 - a. Assuming no errors have occurred, the credit balance in the cash account resulted from writing checks for \$1,850 in excess of the amount of cash on deposit.
 - b. The \$1,850 credit balance in the cash account as of December 31 is a liability owed to the bank. It is usually referred to as an "overdraft" and should be classified on the balance sheet as a liability.
4.
 - a. The revenue was earned in October.
 - b. (1) Debit Accounts Receivable and credit Fees Earned or another appropriately titled revenue account in October.
(2) Debit Cash and credit Accounts Receivable in November.
5. No. Errors may have been made that had the same erroneous effect on both debits and credits, such as failure to record and/or post a transaction, recording the same transaction more than once, and posting a transaction correctly but to the wrong account.
6. The listing of \$9,800 is a transposition; the listing of \$100 is a slide.
7.
 - a. No. Because the same error occurred on both the debit side and the credit side of the trial balance, the trial balance would not be out of balance.
 - b. Yes. The trial balance would not balance. The error would cause the debit total of the trial balance to exceed the credit total by \$90.
8.
 - a. The equality of the trial balance would not be affected.
 - b. On the income statement, total operating expenses (salary expense) would be overstated by \$7,500, and net income would be understated by \$7,500. On the statement of stockholders' equity, the beginning and ending retained earnings would be correct. However, net income and dividends would be understated by \$7,500. These understatements offset one another, and thus, ending retained earnings is correct. The balance sheet is not affected by the error.
9.
 - a. The equality of the trial balance would not be affected.
 - b. On the income statement, revenues (fees earned) would be overstated by \$300,000, and net income would be overstated by \$300,000. On the statement of stockholders' equity, the beginning retained earnings would be correct. However, net income and ending retained earnings would be overstated by \$300,000. The balance sheet total assets is correct. However, liabilities (notes payable) is understated by \$300,000, and stockholders' equity (retained earnings) is overstated by \$300,000. The understatement of liabilities is offset by the overstatement of stockholders' equity (retained earnings), and thus, total liabilities and stockholders' equity is correct.
10.
 - a. From the viewpoint of Surety Storage, the balance of the checking account represents an asset.
 - b. From the viewpoint of Ada Savings Bank, the balance of the checking account represents a liability.

Using the following T account, solve for the amount of supplies expense (indicated by ? below).

Supplies		
Aug. 1 Bal.	1,025	? Supplies expense
Supplies purchased	3,110	
Aug. 31 Bal.	1,324	

$$\$1,324 = \$1,025 + \$3,110 - \text{Supplies expense}$$

$$\text{Supplies expense} = \$1,025 + \$3,110 - \$1,324 = \$2,811$$

BE 2–6

- a. The totals are equal because both the debit and credit entries were journalized and posted for \$12,900.
- b. The totals are unequal. The credit total is higher by \$1,656 (\$1,840 – \$184).
- c. The totals are unequal. The debit total is higher by \$4,500 (\$8,300 – \$3,800).

Note: The first entry in (b) reverses the incorrect entry, and the second entry records the correct entry. These two entries could also be combined into one entry as shown below; however, preparing two entries would make it easier for someone to understand later what happened and why the entries were necessary.

- a. The increase of \$270,800 (\$1,245,000 – \$974,200) in the cash account does not indicate net income of that amount. Net income is the net change in all assets and liabilities from operating (revenue and expense) transactions.

- Debit (negative) balance of \$16,000 (\$314,000 – \$10,000 – \$320,000). This negative balance means that the liabilities of the business exceed the assets.
- Yes. The balance sheet prepared at December 31 will balance, with Retained Earnings being reported in the stockholders' equity section as a debit (negative) balance of \$16,000.

Ex. 2-17

Inequality of trial balance totals would be caused by errors described in (c) and (e). For (c), the debit total would exceed the credit total by \$9,900 (\$4,950 + \$4,950). For (e), the credit total would exceed the debit total by \$17,100 (\$19,000 – \$1,900).

Errors (b), (c), (d), and (e) would require correcting entries. Although it is not a correcting entry, the entry that was not made in (a) should also be entered in the journal.

1. The Debit column total is added incorrectly. The sum is \$1,098,500 rather than \$1,801,500.
2. The trial balance should be dated “December 31, 20Y8,” not “For the Year Ending December 31, 20Y8.”
3. The Accounts Receivable balance should be in the Debit column.
4. The Accounts Payable balance should be in the Credit column.
5. The Dividends balance should be in the Debit column.
6. The Advertising Expense balance should be in the Debit column.

A corrected trial balance would be as follows:

5. Some supplies may have been used during November, but no supplies expense has been recorded.

As will be discussed in Chapter 3, adjustments are necessary at the end of the accounting period to bring the accounts up to date. For example, adjustments for supplies used, insurance expired, and depreciation would probably be required by Heritage Designs.

Note to Instructors: At this point, students have not been exposed to depreciation, but some insightful students might recognize the need for recording supplies used and insurance expired. You might use this as an opportunity to discuss what is coming in Chapter 3.

5. (a) The unadjusted trial balance in (4) still balances because the debits equaled the credits in the original journal entry.

(b) The correcting entry for \$7,200 (\$19,100 – \$11,900) would be as follows:

JOURNAL**Page** 19

5. Some supplies may have been used during October, but no supplies expense has been recorded.

As will be discussed in Chapter 3, adjustments are necessary at the end of the accounting period to bring the accounts up to date. For example, adjustments for supplies used, insurance expired, and depreciation would probably be required by Pioneer Designs.

Note to Instructors: At this point, students have not been exposed to depreciation, but some insightful students might recognize the need for recording supplies used and insurance expired. You might use this as an opportunity to discuss what is coming in Chapter 3.

5. (a) The unadjusted trial balance in (4) still balances because the debits equaled the credits in the original journal entry.

(b) The correcting entry for \$9,000 (\$10,000 – \$1,000) would be as follows:

2. No. The trial balance indicates only that the debits and credits are equal. Any errors that have the same effect on debits and credits will not affect the balancing of the trial balance.

Total operating expenses	\$(131,801)	\$(104,773)	\$ 27,028	25.8%
Operating income	\$ 4,186	\$ 2,233	\$ 1,953	87.5%

- b. The horizontal analysis shows that total revenues increased by 27.1% between the two years, with a strong increase in service sales. Service sales are revenues earned from Amazon's Web hosting, Web design, and order fulfillment services provided for other businesses. This part of Amazon apparently has been growing rapidly. Total operating expenses have grown by 25.8% between the two years, indicating that expenses are growing slower than revenues. The expense growth appears to be occurring across all the major expense categories. The net result is a significant increase in operating income between the two years of 87.5%. Thus, Amazon demonstrates significant revenue and operating income growth from Year 1 to Year 2.

Operating income	\$ 34,567	\$ 763,589	\$(729,022)	(95.5)%

- b. Revenue decreased by 13.3% in Year 2, while total expenses increased 3.5%. Food, beverage, packing expense decreased by 9.2%, while the other expenses increased from 5.7% (labor) to 24.7% (general and administrative). As a result, operating income decreased by 95.5%, a significant decrease and unfavorable result.
- c. The significant decrease in revenue and operating income in Year 2 was caused by food-borne illnesses (E. Coli) in as many as 15 states. As a result, customers avoided Chipotle's restaurants with a related decrease in revenue. The 9.2% decrease in food, beverage, packing expense is consistent with the decrease in customers and related revenue.

Operating income	\$ 27.6	\$ 38.4	\$(10.8)	(28.1)%

- b. Operating income decreased \$10.8 million or 28.1% in Year 2. This is a significant decrease and would be viewed unfavorably by stockholders. Revenue decreased by 1.3% (\$6.4 million), which was accompanied by a 7.8% (\$18.6 million) decrease in cost of merchandise sold. However, selling, general, admin. expenses increased by 13.5% (\$28.1 million), which was partially offset by a 23.3% (\$5.1 million) decrease in other expenses.

MAD 2-4

- a. 1. Revenue: \$73,785 – \$72,618 = \$1,167

$$\frac{\$1,167}{\$72,618} = 1.6\%$$

2. Operating expenses: \$68,875 – \$68,083 = \$792

$$\frac{\$792}{\$68,083} = 1.2\%$$

3. Operating income: \$4,910 – \$4,535 = \$375

$$\frac{\$375}{\$4,535} = 8.3\%$$

- b. The revenue increased by 1.6% between the two years, while the operating expenses grew by 1.2%. Thus, expenses grew less than revenues. As a result, operating income increased 8.3% in Year 2.

MAD 2–5

- a. 1. Revenue: $\$482,130 - \$485,651 = \$(3,521)$
 $\frac{\$(3,521)}{\$485,651} = (0.7)\%$
2. Operating expenses: $\$458,025 - \$458,504 = \$(479)$
 $\frac{\$(479)}{\$458,504} = (0.1)\%$
3. Operating income: $\$24,105 - \$27,147 = \$(3,042)$
 $\frac{\$(3,042)}{\$27,147} = (11.2)\%$
- b. Revenue decreased by 0.7%, while operating expenses decreased only 0.1%. As a result, operating income decreased by 11.2%, which is an unfavorable change in Year 2.

1. **No. For financial accounting information to be useful, it must accurately reflect an entity's business transactions and economic activity. For this to happen, each account must reflect the increases or decreases that result from each transaction.**

If the trial balance does not balance, it means that a transaction has not been accurately recorded in the accounts. By knowingly submitting a trial balance that does not accurately reflect the transactions in the accounts, Buddy is demonstrating a failure of individual character and is acting unethically.

The following general journal entry should be used to record the receipt of tuition payments received in advance of classes:

Cash.....	XXX	
Unearned Tuition Deposits.....		XXX

Cash is an asset account, and Unearned Tuition Deposits is a liability account. As the classes are taught throughout the term, the unearned tuition deposits become earned revenue.

TIF 2–5

The journal is called the book of original entry. It provides a time-ordered history of the transactions that have occurred for the firm. This time-ordered history is very important because it allows one to trace ledger account balances back to the original transactions that created those balances. This is called an “audit trail.” If the firm recorded transactions by posting to ledgers directly, it would be nearly impossible to reconstruct actual transactions. The debits and credits would all be separated and accumulated into the ledger balances. Once the transactions become part of the ledger balances, the original transactions would be lost. That is, there would be no audit trail, and any errors that might occur in recording transactions would be almost impossible to trace. Thus, firms first record transaction debits and credits in a journal. These transactions are then posted to the ledger to update the account balances. The journal and ledger are linked using posting references. This allows an analyst to trace the transaction flow forward or backward, depending on the need.

TIF 2–6

1. The rules of debit and credit must be memorized. Dot is correct in that the rules of debit and credit could be reversed as long as everyone accepted and abided by the rules. However, the important point is that everyone accepts the rules as the way in which transactions should be recorded. This generates uniformity across the accounting profession and reduces errors and confusion. Because the current rules of debit and credit have been used for centuries, Dot should adapt to the current rules of debit and credit, rather than devise her own.

The primary reason that all accounts do not have the same rules for increases and decreases is for control of the recording process. The double-entry accounting system, which includes both (1) the rules of debit and credit and (2) the accounting equation, guarantees that (1) debits always equal credits and (2) assets always equal liabilities plus owner's equity. If all increases in the account were recorded by debits, then the control that debits always equal credits would be removed. In addition, the control that the normal balance of assets is a debit would also be removed. The accounting equation would still hold, but the control over recording transactions would be weakened.

Dot is correct that we could call the left and right sides of an account different terms, such as "LE" or "RE." Again, centuries of tradition dictate the current terminology used. One might note, however, that in Latin, *debere* (debit) means left and *credere* (credit) means right.

2. The accounting system may be designed to capture information about the buying habits of various customers or vendors, such as the quantity normally ordered, average amount ordered, number of returns, etc. Thus, in a sense, there can be other "sides" of (information about) a transaction that are recorded by the accounting system. Such information would be viewed as supplemental to the basic double-entry accounting system.
