ESSAY

1. Identify the basic characteristics of formal and informal institutions.

ANS:

An institutional framework is made up of formal and informal institutions governing individual and firm behavior. Formal institutions include laws, regulations, and rules. Their primary supportive pillar, the regulatory pillar, is the coercive power of governments. Informal institutions include norms, cultures, and ethics. There are two main supportive pillars: normative and cognitive. Normative pillar refers to how the values, beliefs, and actions of other relevant players—collectively known as norms—influence the behavior of focal individuals and firms.

2. What are the two core propositions of the institution-based view?

ANS:

The first core proposition of the institution-based view is that managers and firms rationally pursue their interests and make choices within the formal and informal constraints in a given institutional framework. The second proposition is that formal and informal institutions combine to govern firm behavior, in situations where formal constraints are unclear or fail, informal constraints will play a larger role in reducing uncertainty and providing constancy to managers and firms.

3. Outline the differences between democracy and totalitarianism.

ANS:

Democracy is a political system in which citizens elect representatives to govern the country on their behalf. A fundamental aspect of democracy that is relevant to the effective conduct of global business is an individual's right to freedom of expression and organization. Democracy was pioneered in Athens in ancient Greece. Totalitarianism is a political system in which one person or party exercises absolute political control over the population. A totalitarian regime can also be known as a dictatorship.

4. What is totalitarianism? Outline the four major types of totalitarian systems.

ANS:

The opposite end of democracy is totalitarianism (also known as dictatorship), which is defined as a political system in which one person or party exercises absolute political control over the population. Communist totalitarianism centers on a communist party. This system had been embraced throughout Central and Eastern Europe and the former Soviet Union until the late 1980s. It is still practiced in China, Cuba, North Korea, and Vietnam.

Right-wing totalitarianism is characterized by its intense hatred of communism. One party, typically backed by the military, restricts political freedom, arguing that such freedom would lead to communism. In the postwar decades, the Philippines, South Africa, South Korea, Taiwan, and most Latin American countries practiced right-wing totalitarianism. Most of these countries have recently become democratic.

Theocratic totalitarianism refers to the monopolization of political power in the hands of one religious party or group. Iran and Saudi Arabia are leading examples.

Tribal totalitarianism refers to one tribe or ethnic group monopolizing political power and oppressing other tribes or ethnic groups.

5. Define political risk. How is it related to nationalization?

ANS:

Political risk is risk associated with political changes that may negatively influence domestic and foreign firms. The most extreme political risk may lead to nationalization (expropriation) of foreign assets. This happened in many totalitarian countries from the 1950s through the 1970s. It has not become a thing of the past. Zimbabwe has recently demanded that foreign mining companies cede 51% of their equity without compensation. It is hardly surprising that foreign mining companies are sick and tired and would rather go to "greener pastures" elsewhere.

6. Compare and contrast civil law, common law, and theocratic law.

ANS:

Civil law is the oldest, most influential, and most widely distributed law around the world. It uses comprehensive statutes and codes as a primary means to form legal judgments. More than 80 countries practice civil law.

Precedents and traditions from previous judicial decisions shape common law, which is English in origin. Common law has more flexibility because judges have to resolve specific disputes based on their interpretation of the law, and such interpretation may give new meaning to the law. Contracts in common law countries tend to be long and detailed to cover all possible contingencies, because common law tends to be relatively underdefined.

Civil law has less flexibility because judges only have the power to apply the law. Contracts in civil law countries are usually shorter and less specific because many issues typically articulated in common law contracts are already covered in comprehensive civil law codes.

Theocratic law is a legal system based on religious teachings. Examples include Islamic and Jewish laws. Islamic law is the only surviving example of a theocratic legal system formally practiced by some governments, such as those in Iran and Saudi Arabia.

7. How can a firm protect intellectual property rights (IP rights) when countries have different levels of IP rights' enforcement?

ANS:

Intellectual property rights (IPR) are rights associated with the ownership of intellectual property, such as patents, copyrights, and trademarks.

The Paris Convention for the Protection of Industrial Property is the "gold standard" for a higher level of IPR protection. Adopting the Paris Convention is required in order to become a signatory country to the WTO's Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS). Given the global differences in the formal rules, much stricter IPR protection is provided by TRIPS. Once countries join TRIPS, firms are often forced to pay more attention to innovation.

IP rights need to be asserted and enforced through a formal system, which is designed to punish violators and to provide an incentive for people and firms to innovate. However, the intangible nature of IP rights makes their protection difficult. Around the world, piracy—unauthorized use of intellectual property—is widespread. As such, IP rights are better protected not only through formal institutions, but also through informal institutions, such as ethical social awareness.

8. Describe the differences among the three economic systems.

ANS:

A pure market economy is characterized by an "invisible hand" of market forces noted by Adam Smith in the *Wealth of Nations* in 1776. The government takes a hands-off approach known as *laissez faire*.

The government only performs functions the private sector cannot perform.

A pure command economy is defined by a government taking, in the words of Lenin, the "commanding height" in the economy. All factors of production should be government-owned or state-owned and controlled, and all supply, demand, and pricing are planned by the government.

A mixed economy has elements of both a market and a command economy. It boils down to the relative distribution of market forces versus command forces.
