

File: 8e_BGN_CH02_TB, Chapter 2, Job-Order Costing: Calculating Unit Product Costs

True/False

[QUESTION]

1. A cost driver is a factor, such as machine-hours, beds occupied, computer time, or flight-hours, that causes direct costs.

Answer: F

Difficulty: 2 Medium

Learning Objective: 02-01

Topic Area:

Bloom's: Understand

AACSB: Reflective Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

[QUESTION]

2. Job-order costing systems often use allocation bases that do not reflect how jobs actually use overhead resources.

Answer: T

Difficulty: 2 Medium

Learning Objective: 02-01

Topic Area:

Bloom's: Understand

AACSB: Reflective Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

[QUESTION]

3. An employee time ticket is an hour-by-hour summary of the employee's activities throughout the day.

Answer: T

Difficulty: 1 Easy

Topic Area:

Bloom's: Understand

AACSB: Reflective Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

[QUESTION]

4. The formula for computing the predetermined overhead rate is:

Predetermined overhead rate = Estimated total amount of the allocation base ÷ Estimated total manufacturing overhead cost

Answer: F

Difficulty: 1 Easy

Learning Objective: 02-01

Topic Area:

Bloom's: Remember

AACSB: Reflective Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

[QUESTION]

5. Generally speaking, when going through the process of computing a predetermined overhead rate, the estimated total manufacturing overhead cost is determined before estimating the amount of the allocation base.

Answer: F

Difficulty: 1 Easy

Learning Objective: 02-01

Topic Area:

Bloom's: Understand

AACSB: Reflective Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

[QUESTION]

6. If a job is not completed at year end, then no manufacturing overhead cost would be applied to that job when a predetermined overhead rate is used.

Answer: F

Difficulty: 2 Medium

Learning Objective: 02-02

Topic Area:

Bloom's: Understand

AACSB: Reflective Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

[QUESTION]

7. Actual overhead costs are not assigned to jobs in a job costing system.

Answer: T

Difficulty: 1 Easy

Learning Objective: 02-02

Topic Area:

Bloom's: Understand

AACSB: Reflective Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

[QUESTION]

8. The amount of overhead applied to a particular job equals the actual amount of overhead caused by the job.

Answer: F

Difficulty: 1 Easy

Learning Objective: 02-02

Topic Area:

Bloom's: Understand

AACSB: Reflective Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

[QUESTION]

9. If the overhead rate is computed annually based on the actual costs and activity for the year, the manufacturing overhead assigned to any particular job can be computed as soon as the job is completed.

Answer: F
Difficulty: 1 Easy
Learning Objective: 02-02
Topic Area:
Bloom's: Understand
AACSB: Reflective Thinking
AICPA: BB Critical Thinking
AICPA: FN Measurement
Feedback:

[QUESTION]

10. Job cost sheets contain entries for actual direct material, actual direct labor, and actual manufacturing overhead cost incurred in completing a job.

Answer: F
Difficulty: 2 Medium
Learning Objective: 02-03
Topic Area:
Bloom's: Understand
AACSB: Reflective Thinking
AICPA: BB Critical Thinking
AICPA: FN Measurement
Feedback:

[QUESTION]

11. In a job-order cost system, indirect labor is assigned to a job using information from the employee time ticket.

Answer: F
Difficulty: 3 Hard
Learning Objective: 02-03
Topic Area:
Bloom's: Understand
AACSB: Reflective Thinking
AICPA: BB Critical Thinking
AICPA: FN Measurement
Feedback:

[QUESTION]

12. If the allocation base in the predetermined overhead rate does not drive overhead costs, it will nevertheless provide reasonably accurate unit product costs because of the averaging process.

Answer: F
Difficulty: 1 Easy
Learning Objective: 02-03
Topic Area:
Bloom's: Understand
AACSB: Reflective Thinking
AICPA: BB Critical Thinking
AICPA: FN Measurement
Feedback:

[QUESTION]

13. A job cost sheet is used to record how much a customer pays for the job once the job is completed.

Feedback:

[QUESTION]

25. Assigning manufacturing overhead to a specific job is complicated by all of the below except:

- A) Manufacturing overhead is an indirect cost that is either impossible or difficult to trace to a particular job.
- B) Manufacturing overhead is incurred only to support some jobs.
- C) Manufacturing overhead consists of both variable and fixed costs.
- D) The average cost of actual fixed manufacturing overhead expenses will vary depending on how many units are produced in a period.

Answer: B

Difficulty: 2 Medium

Learning Objective: 02-02

Topic Area:

Blooms: Understand

AACSB: Reflective Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

[QUESTION]

26. Which of the following statements about using a plantwide overhead rate based on direct labor is correct?

- A) Using a plantwide overhead rate based on direct labor-hours will ensure that direct labor costs are correctly traced to jobs.
- B) Using a plantwide overhead rate based on direct labor costs will ensure that direct labor costs will be correctly traced to jobs.
- C) It is often overly simplistic and incorrect to assume that direct labor-hours is a company's only manufacturing overhead cost driver.
- D) The labor theory of value ensures that using a plantwide overhead rate based on direct labor will do a reasonably good job of assigning overhead costs to jobs.

Answer: C

Difficulty: 2 Medium

 AICPA: FN Measurement
 Feedback:

[QUESTION]

29. Johansen Corporation uses a predetermined overhead rate based on direct labor-hours to apply manufacturing overhead to jobs. The Corporation has provided the following estimated costs for the next year:

Direct materials	\$6,000
Direct labor	\$20,000
Rent on factory building.....	\$15,000
Sales salaries	\$25,000
Depreciation on factory equipment	\$8,000
Indirect labor.....	\$12,000
Production supervisor's salary	\$15,000

Jameson estimates that 20,000 direct labor-hours will be worked during the year. The predetermined overhead rate per hour will be:

- A) \$2.50 per direct labor-hour
- B) \$2.79 per direct labor-hour
- C) \$3.00 per direct labor-hour
- D) \$4.00 per direct labor-hour

Answer: A
 Difficulty: 2 Medium
 Learning Objective: 02-01
 Topic Area:
 Blooms: Apply
 AACSB: Analytical Thinking
 AICPA: BB Critical Thinking
 AICPA: FN Measurement
 Feedback:

Rent on factory building.....	\$15,000
Depreciation on factory equipment	8,000
Indirect labor.....	12,000
Production supervisor's salary	15,000
Manufacturing overhead.....	<u>\$50,000</u>

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base

Predetermined overhead rate = \$50,000 ÷ 20,000 direct labor-hours = \$2.50 per direct labor-hour

[QUESTION]

30. The Silver Corporation uses a predetermined overhead rate to apply manufacturing overhead to jobs. The predetermined overhead rate is based on labor cost in Dept. A and on machine-hours in Dept. B. At the beginning of the year, the Corporation made the following estimates:

	Dept. A	Dept. B
Direct labor cost	\$60,000	\$40,000
Manufacturing overhead.....	\$90,000	\$45,000

Direct labor-hours	6,000	9,000
Machine-hours	2,000	15,000

What predetermined overhead rates would be used in Dept. A and Dept. B, respectively?

- A) 67% and \$3.00
- B) 150% and \$5.00
- C) 150% and \$3.00
- D) 67% and \$5.00

Answer: C

Difficulty: 1 Easy

Learning Objective: 02-01

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Dept. A

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base

Predetermined overhead rate = \$90,000 ÷ \$60,000 = 150% of direct labor cost

Dept. B

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base

Predetermined overhead rate = \$45,000 ÷ 15,000 machine-hours = \$3.00 per machine-hour

[QUESTION]

31. Purves Corporation is using a predetermined overhead rate that was based on estimated total fixed manufacturing overhead of \$121,000 and 10,000 direct labor-hours for the period. The company incurred actual total fixed manufacturing overhead of \$113,000 and 10,900 total direct labor-hours during the period. The predetermined overhead rate is closest to:

- A) \$10.37
- B) \$12.10
- C) \$11.10
- D) \$11.30

Answer: B

Difficulty: 1 Easy

Learning Objective: 02-01

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Estimated total fixed manufacturing overhead (a)...	\$121,000
Estimated activity level (b)	10,000
Predetermined overhead rate (a) ÷ (b)	\$12.10

[QUESTION]

32. Reamer Corporation uses a predetermined overhead rate based on machine-hours to apply manufacturing overhead to jobs. The Corporation has provided the following estimated costs for next year:

Direct materials	\$1,000
Direct labor	\$3,000
Sales commissions	\$4,000

Salary of production supervisor	\$2,000
Indirect materials	\$400
Advertising expense	\$800
Rent on factory equipment	\$1,000

Reamer estimates that 500 direct labor-hours and 1,000 machine-hours will be worked during the year. The predetermined overhead rate per hour will be:

- A) \$6.80 per machine-hour
- B) \$6.00 per machine-hour
- C) \$3.00 per machine-hour
- D) \$3.40 per machine-hour

Answer: D

Difficulty: 2 Medium

Learning Objective: 02-01

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Salary of production supervisor	\$2,000
Indirect materials	400
Rent on factory equipment	1,000
Total manufacturing overhead	<u>\$3,400</u>

Predetermined overhead rate = Estimated total manufacturing overhead ÷ Estimated total amount of the allocation base = \$3,400 ÷ 1,000 machine-hours = \$3.40 per machine-hour

[QUESTION]

33. Baj Corporation uses a predetermined overhead rate base on machine-hours that it recalculates at the beginning of each year. The company has provided the following data for the most recent year.

Estimated total fixed manufacturing overhead from the beginning of the year	\$534,000	
Estimated activity level from the beginning of the year	30,000	machine-hours
Actual total fixed manufacturing overhead	\$487,000	
Actual activity level	27,400	machine-hours

The predetermined overhead rate per machine-hour would be closest to:

- A) \$17.80
- B) \$19.49
- C) \$16.23
- D) \$17.77

Answer: A

Difficulty: 1 Easy

Learning Objective: 02-01

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Estimated total fixed manufacturing overhead (a)...	\$534,000
Estimated activity level (b)	30,000
Predetermined overhead rate (a) ÷ (b)	<u>\$17.80</u>

[QUESTION]

34. Giannitti Corporation bases its predetermined overhead rate on the estimated machine-hours for the upcoming year. Data for the upcoming year appear below:

Estimated machine-hours.....	36,000	
Estimated variable manufacturing overhead.....	\$3.01	per machine-hour
Estimated total fixed manufacturing overhead	\$1,058,040	

The predetermined overhead rate for the recently completed year was closest to:

- A) \$29.39 per machine-hour
- B) \$32.40 per machine-hour
- C) \$32.81 per machine-hour
- D) \$3.01 per machine-hour

Answer: B

Difficulty: 2 Medium

Learning Objective: 02-01

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Estimated total manufacturing overhead = \$1,058,040 + (\$3.01 per machine-hour × 36,000 machine-hours) = \$1,166,400

Predetermined overhead rate = Estimated total manufacturing overhead ÷ Estimated total amount of the allocation base = \$1,166,400 ÷ 36,000 machine-hours = \$32.40 per machine-hour

[QUESTION]

35. Gilchrist Corporation bases its predetermined overhead rate on the estimated machine-hours for the upcoming year. At the beginning of the most recently completed year, the Corporation estimated the machine-hours for the upcoming year at 79,000 machine-hours. The estimated variable manufacturing overhead was \$7.38 per machine-hour and the estimated total fixed manufacturing overhead was \$2,347,090. The predetermined overhead rate for the recently completed year was closest to:

- A) \$37.09 per machine-hour
- B) \$36.07 per machine-hour
- C) \$7.38 per machine-hour
- D) \$29.71 per machine-hour

Answer: A

Difficulty: 2 Medium

Learning Objective: 02-01

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Estimated total manufacturing overhead = \$2,347,090 + (\$7.38 per machine-hour × 79,000 machine-hours) = \$2,930,110

Predetermined overhead rate = Estimated total manufacturing overhead ÷ Estimated total amount of the allocation base = \$2,930,110 ÷ 79,000 machine-hours = \$37.09 per machine-hour

[QUESTION]

36. Dearden Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on total fixed manufacturing overhead cost of \$144,000, variable manufacturing overhead of \$2.00 per machine-hour, and 60,000 machine-hours. The predetermined overhead rate is closest to:

- A) \$2.40 per machine-hour
- B) \$6.40 per machine-hour
- C) \$4.40 per machine-hour
- D) \$2.00 per machine-hour

Answer: C

Difficulty: 1 Easy

Learning Objective: 02-01

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base \times Estimated total amount of the allocation base) = \$144,000 + (\$2.00 per machine-hour \times 60,000 machine-hours) = \$144,000 + \$120,000 = \$264,000
Predetermined overhead rate = Estimated total manufacturing overhead cost \div Estimated total amount of the allocation base = \$264,000 \div 60,000 machine-hours = \$4.40 per machine-hour

[QUESTION]

37. Longobardi Corporation bases its predetermined overhead rate on the estimated labor-hours for the upcoming year. At the beginning of the most recently completed year, the Corporation estimated the labor-hours for the upcoming year at 46,000 labor-hours. The estimated variable manufacturing overhead was \$6.25 per labor-hour and the estimated total fixed manufacturing overhead was \$1,026,260. The actual labor-hours for the year turned out to be 41,200 labor-hours. The predetermined overhead rate for the recently completed year was closest to:

- A) \$28.56 per labor-hour
- B) \$22.31 per labor-hour
- C) \$6.25 per labor-hour
- D) \$31.16 per labor-hour

Answer: A

Difficulty: 2 Medium

Learning Objective: 02-01

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Estimated total manufacturing overhead = \$1,026,260 + (\$6.25 per labor-hour \times 46,000 labor-hours) = \$1,313,760

Predetermined overhead rate = Estimated total manufacturing overhead \div Estimated total amount of the allocation base = \$1,313,760 \div 46,000 labor-hours = \$28.56 per labor-hour

[QUESTION]

38. Valvano Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on total fixed manufacturing overhead cost of \$440,000, variable manufacturing overhead of \$2.20 per machine-hour, and 50,000 machine-hours. The estimated total manufacturing overhead is closest to:

- A) \$440,000
- B) \$110,000
- C) \$440,002
- D) \$550,000

Answer: D

Difficulty: 1 Easy

Learning Objective: 02-01

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$440,000 + (\$2.20 per machine-hour × 50,000 machine-hours) = \$440,000 + \$110,000 = \$550,000

[QUESTION]

39. Brothern Corporation bases its predetermined overhead rate on the estimated machine-hours for the upcoming year. Data for the most recently completed year appear below:

Estimates made at the beginning of the year:

Estimated machine-hours	39,000	
Estimated variable manufacturing overhead	\$6.76	per machine-hour
Estimated total fixed manufacturing overhead.....	\$794,430	
Actual machine-hours for the year	42,700	

The predetermined overhead rate for the recently completed year was closest to:

- A) \$25.37 per machine-hour
- B) \$27.13 per machine-hour
- C) \$6.76 per machine-hour
- D) \$20.37 per machine-hour

Answer: B

Difficulty: 2 Medium

Learning Objective: 02-01

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Estimated total manufacturing overhead = \$794,430 + (\$6.76 per machine-hour × 39,000 machine-hours) = \$1,058,070

Predetermined overhead rate = Estimated total manufacturing overhead ÷ Estimated total amount of the allocation base = \$1,058,070 ÷ 39,000 machine-hours = \$27.13 per machine-hour

[QUESTION]

40. Steele Corporation uses a predetermined overhead rate based on machine-hours to apply manufacturing overhead to jobs. Steele Corporation has provided the following estimated costs for next year:

Direct materials	\$20,000
Direct labor	\$60,000
Sales commissions.....	\$80,000
Salary of production supervisor.....	\$40,000
Indirect materials	\$8,000
Advertising expense	\$16,000
Rent on factory equipment	\$20,000

Steele estimates that 10,000 direct labor-hours and 16,000 machine-hours will be worked during the year.

The predetermined overhead rate per hour will be:

- A) \$4.25
- B) \$8.00
- C) \$9.00

D) \$10.25

Answer: A

Difficulty: 2 Medium

Learning Objective: 02-01

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Salary of production supervisor.....	\$40,000
Indirect materials	8,000
Rent on factory equipment	20,000
Manufacturing overhead.....	<u>\$68,000</u>

Predetermined overhead rate = Estimated total manufacturing overhead ÷ Estimated total amount of the allocation base

Predetermined overhead rate = \$68,000 ÷ 16,000 machine-hours = \$4.25 per machine-hour

[QUESTION]

41. Helland Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on the following data:

Total direct labor-hours	30,000
Total fixed manufacturing overhead cost	\$189,000
Variable manufacturing overhead per direct labor-hour.....	\$2.50

The predetermined overhead rate is closest to:

A) \$2.50 per direct labor-hour

B) \$11.30 per direct labor-hour

C) \$6.30 per direct labor-hour

D) \$8.80 per direct labor-hour

Answer: D

Difficulty: 1 Easy

Learning Objective: 02-01

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$189,000 + (\$2.50 per direct labor-hour × 30,000 direct labor-hours) = \$189,000 + \$75,000 = \$264,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$264,000 ÷ 30,000 direct labor-hours = \$8.80 per direct labor-hour

[QUESTION]

42. Laflame Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours.....	70,000
Total fixed manufacturing overhead cost	\$357,000

Variable manufacturing overhead per machine-hour \$3.90

The estimated total manufacturing overhead is closest to:

- A) \$273,000
- B) \$630,000
- C) \$357,004
- D) \$357,000

Answer: B

Difficulty: 1 Easy

Learning Objective: 02-01

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$357,000 + (\$3.90 per machine-hour × 70,000 machine-hours) = \$357,000 + \$273,000 = \$630,000

[QUESTION]

43. Almaraz Corporation has two manufacturing departments--Forming and Finishing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Forming	Finishing	Total
Estimated total machine-hours (MHs)	7,000	3,000	10,000
Estimated total fixed manufacturing overhead cost	\$40,600	\$8,100	\$48,700
Estimated variable manufacturing overhead cost per MH ...	\$1.30	\$2.80	

Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. That predetermined manufacturing overhead rate is closest to:

- A) \$6.62
- B) \$4.87
- C) \$4.10
- D) \$7.10

Answer: A

Difficulty: 2 Medium

Learning Objective: 02-01

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

The first step is to calculate the estimated total overhead costs in the two departments.

Forming

Estimated fixed manufacturing overhead	\$40,600
Estimated variable manufacturing overhead (\$1.30 per MH × 7,000 MHs)	9,100
Estimated total manufacturing overhead cost	<u>\$49,700</u>

Finishing

Estimated fixed manufacturing overhead	\$8,100
Estimated variable manufacturing overhead (\$2.80 per MH × 3,000 MHs)	8,400
Estimated total manufacturing overhead cost	<u>\$16,500</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$49,700 + \$16,500 = \$66,200) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$66,200	
Estimated total machine hours	10,000	MHs
Predetermined overhead rate.....	\$6.62	per MH

[QUESTION]

44. Bernson Corporation is using a predetermined overhead rate that was based on estimated total fixed manufacturing overhead of \$492,000 and 30,000 machine-hours for the period. The company incurred actual total fixed manufacturing overhead of \$517,000 and 28,300 total machine-hours during the period. The amount of manufacturing overhead that would have been applied to all jobs during the period is closest to:

- A) \$464,120
- B) \$492,000
- C) \$487,703
- D) \$25,000

Answer: A

Difficulty: 1 Easy

Learning Objective: 02-01

Learning Objective: 02-02

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Estimated total fixed manufacturing overhead (a)...	\$492,000
Estimated activity level (b).....	30,000
Predetermined overhead rate (a) ÷ (b).....	\$16.40
Actual activity level	28,300
Manufacturing overhead applied	\$464,120

[QUESTION]

45. Beat Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours.....	40,000
Total fixed manufacturing overhead cost	\$344,000
Variable manufacturing overhead per machine-hour	\$3.90

Recently, Job M759 was completed. It required 60 machine-hours. The amount of overhead applied to Job M759 is closest to:

- A) \$750
- B) \$516
- C) \$984
- D) \$234

Answer: A

Difficulty: 1 Easy

Learning Objective: 02-01

Learning Objective: 02-02

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$344,000 + (\$3.90 per machine-hour × 40,000 machine-hours) = \$344,000 + \$156,000 = \$500,000
Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$500,000 ÷ 40,000 machine-hours = \$12.50 per machine-hour
Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$12.50 per machine-hour × 60 machine-hours = \$750

[QUESTION]

46. Mundorf Corporation has two manufacturing departments--Forming and Assembly. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Forming	Assembly	Total
Estimated total machine-hours (MHs)	9,000	1,000	10,000
Estimated total fixed manufacturing overhead cost	\$52,200	\$2,400	\$54,600
Estimated variable manufacturing overhead cost per MH ...	\$2.00	\$2.10	

During the most recent month, the company started and completed two jobs--Job B and Job H. There were no beginning inventories. Data concerning those two jobs follow:

	Job B	Job H
Forming machine-hours	6,100	2,900
Assembly machine-hours	400	600

Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. The amount of manufacturing overhead applied to Job B is closest to:

- A) \$48,555
- B) \$35,490
- C) \$2,988
- D) \$45,567

Answer: A

Difficulty: 2 Medium

Learning Objective: 02-01

Learning Objective: 02-02

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

The first step is to calculate the estimated total overhead costs in the two departments.

Forming

Estimated fixed manufacturing overhead	\$52,200
Estimated variable manufacturing overhead (\$2.00 per MH × 9,000 MHs)	18,000
Estimated total manufacturing overhead cost	<u>\$70,200</u>

Assembly

Estimated fixed manufacturing overhead	\$2,400
Estimated variable manufacturing overhead (\$2.10 per MH × 1,000 MHs)	2,100
Estimated total manufacturing overhead cost	<u>\$4,500</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$70,200 + \$4,500 = \$74,700) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$74,700	
Estimated total machine hours	10,000	MHs
Predetermined overhead rate.....	\$7.47	per MH

The overhead applied to Job B is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job
= \$7.47 per MH x (6,100 MHs + 400 MHs)
= \$7.47 per MH x (6,500 MHs)
= \$48,555

[QUESTION]

47. Parido Corporation has two manufacturing departments--Casting and Assembly. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Casting	Assembly	Total
Estimated total machine-hours (MHs)	8,000	2,000	10,000
Estimated total fixed manufacturing overhead cost	\$44,000	\$4,200	\$48,200
Estimated variable manufacturing overhead cost per MH ...	\$1.90	\$3.00	

During the most recent month, the company started and completed two jobs--Job A and Job H. There were no beginning inventories. Data concerning those two jobs follow:

	Job A	Job H
Casting machine-hours	5,400	2,600
Assembly machine-hours	800	1,200

Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. The amount of manufacturing overhead applied to Job H is closest to:

- A) \$8,328
- B) \$26,372
- C) \$18,316
- D) \$18,044

Answer: B

Difficulty: 2 Medium

Learning Objective: 02-01

Learning Objective: 02-02

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

The first step is to calculate the estimated total overhead costs in the two departments.

Casting

Estimated fixed manufacturing overhead	\$44,000
Estimated variable manufacturing overhead (\$1.90 per MH x 8,000 MHs)	15,200
Estimated total manufacturing overhead cost	<u>\$59,200</u>

Assembly

Estimated fixed manufacturing overhead	\$4,200
Estimated variable manufacturing overhead (\$3.00 per MH x 2,000 MHs)	6,000
Estimated total manufacturing overhead cost	<u>\$10,200</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$59,200 + \$10,200 = \$69,400) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$69,400	
Estimated total machine hours	10,000	MHs
Predetermined overhead rate.....	\$6.94	per MH

The overhead applied to Job H is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job
= \$6.94 per MH x (2,600 MHs + 1,200 MHs)
= \$6.94 per MH x (3,800 MHs)
= \$26,372

[QUESTION]

48. Juanita Corporation uses a job-order costing system and applies overhead on the basis of direct labor cost. At the end of October, Juanita had one job still in process. The job cost sheet for this job contained the following information:

Direct materials	\$480
Direct labor	\$150
Manufacturing overhead applied	\$600

An additional \$100 of labor was needed in November to complete this job. For this job, how much should Juanita have transferred to finished goods inventory in November when it was completed?

- A) \$1,330
- B) \$500
- C) \$1,230
- D) \$1,730

Answer: D

Difficulty: 2 Medium

Learning Objective: 02-01

Learning Objective: 02-02

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Overhead applied = Predetermined overhead rate x Amount of the allocation base incurred

\$600 = Predetermined overhead rate x \$150

Predetermined overhead rate = \$600 ÷ \$150 = 4.0

Direct materials	\$480
Direct labor (\$150 + \$100)	250
Manufacturing overhead applied (4.0 x \$250)	1,000
Total product cost.....	<u>\$1,730</u>

[QUESTION]

49. Carradine Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on total fixed manufacturing overhead cost of \$105,000, variable manufacturing overhead of \$3.00 per machine-hour, and 70,000 machine-hours. The company recently completed Job P233 which required 60 machine-hours. The amount of overhead applied to Job P233 is closest to:

- A) \$90
- B) \$270
- C) \$450
- D) \$180

Answer: B

Difficulty: 1 Easy
 Learning Objective: 02-01
 Learning Objective: 02-02
 Topic Area:
 Blooms: Apply
 AACSB: Analytical Thinking
 AICPA: BB Critical Thinking
 AICPA: FN Measurement
 Feedback:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$105,000 + (\$3.00 per machine-hour × 70,000 machine-hours) = \$105,000 + \$210,000 = \$315,000
 Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$315,000 ÷ 70,000 machine-hours = \$4.50 per machine-hour
 Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$4.50 per machine-hour × 60 machine-hours = \$270

[QUESTION]

50. Fusaro Corporation uses a predetermined overhead rate base on machine-hours that it recalculates at the beginning of each year. The company has provided the following data for the most recent year.

Estimated total fixed manufacturing overhead from the beginning of the year	\$684,000	
Estimated activity level from the beginning of the year	40,000	machine-hours
Actual total fixed manufacturing overhead	\$616,000	
Actual activity level	37,700	machine-hours

The amount of manufacturing overhead that would have been applied to all jobs during the period is closest to:

- A) \$644,670
- B) \$684,000
- C) \$68,000
- D) \$580,580

Answer: A
 Difficulty: 1 Easy
 Learning Objective: 02-01
 Learning Objective: 02-02
 Topic Area:
 Blooms: Apply
 AACSB: Analytical Thinking
 AICPA: BB Critical Thinking
 AICPA: FN Measurement
 Feedback:

Estimated total fixed manufacturing overhead (a)...	\$684,000
Estimated activity level (b).....	40,000
Predetermined overhead rate (a) ÷ (b).....	\$17.10
Actual activity level	37,700
Manufacturing overhead applied	\$644,670

[QUESTION]

51. Koelsch Corporation has two manufacturing departments--Molding and Customizing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Molding	Customizing	Total
Estimated total machine-hours (MHs)	1,000	9,000	10,000
Estimated total fixed manufacturing overhead cost	\$4,000	\$25,200	\$29,200

Estimated variable manufacturing overhead cost per MH ...	\$2.00	\$3.00
---	--------	--------

During the most recent month, the company started and completed two jobs--Job F and Job K. There were no beginning inventories. Data concerning those two jobs follow:

	Job F	Job K
Direct materials.....	\$12,300	\$8,400
Direct labor cost.....	\$18,200	\$6,800
Molding machine-hours	700	300
Customizing machine-hours.....	3,600	5,400

Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours and uses a markup of 50% on manufacturing cost to establish selling prices. The calculated selling price for Job K is closest to:

- A) \$72,561
- B) \$79,817
- C) \$24,187
- D) \$48,374

Answer: A

Difficulty: 2 Medium

Learning Objective: 02-01

Learning Objective: 02-02

Learning Objective: 02-03

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

The first step is to calculate the estimated total overhead costs in the two departments.

Molding

Estimated fixed manufacturing overhead	\$4,000
Estimated variable manufacturing overhead (\$2.00 per MH × 1,000 MHs)	<u>2,000</u>
Estimated total manufacturing overhead cost	<u>\$6,000</u>

Customizing

Estimated fixed manufacturing overhead	\$25,200
Estimated variable manufacturing overhead (\$3.00 per MH × 9,000 MHs)	<u>27,000</u>
Estimated total manufacturing overhead cost	<u>\$52,200</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$6,000 + \$52,200 = \$58,200) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$58,200	
Estimated total machine hours	10,000	MHs
Predetermined overhead rate.....	\$5.82	per MH

The overhead applied to Job K is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job
= \$5.82 per MH x (300 MHs + 5,400 MHs)
= \$5.82 per MH x (5,700 MHs)
= \$33,174

Job K's manufacturing cost:

Direct materials.....	\$8,400
-----------------------	---------

Direct labor cost.....	6,800
Manufacturing overhead applied	33,174
Total manufacturing cost	<u>\$48,374</u>

The selling price for Job K:

Total manufacturing cost	\$48,374
Markup (50%)	24,187
Selling price	<u>\$72,561</u>

[QUESTION]

52. Thach Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on total fixed manufacturing overhead cost of \$665,000, variable manufacturing overhead of \$3.00 per machine-hour, and 70,000 machine-hours. Recently, Job T321 was completed with the following characteristics:

Number of units in the job	30
Total machine-hours.....	90
Direct materials.....	\$630
Direct labor cost.....	\$2,880

The unit product cost for Job T321 is closest to:

- A) \$117.00
- B) \$58.50
- C) \$154.50
- D) \$51.50

Answer: C

Difficulty: 2 Medium

Learning Objective: 02-01

Learning Objective: 02-02

Learning Objective: 02-03

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$665,000 + (\$3.00 per machine-hour × 70,000 machine-hours) = \$665,000 + \$210,000 = \$875,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$875,000 ÷ 70,000 machine-hours = \$12.50 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$12.50 per machine-hour × 90 machine-hours = \$1,125

Direct materials.....	\$630
Direct labor	2,880
Manufacturing overhead applied	1,125
Total cost of Job T321	<u>\$4,635</u>

- e. Total cost of Job T321 (a) \$4,635
- Number of units (b)..... 30
- Unit product cost (a) ÷ (b)..... \$154.50

[QUESTION]

53. Tancredi Corporation has two manufacturing departments--Machining and Customizing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Machining	Customizing	Total
Estimated total machine-hours (MHs)	5,000	5,000	10,000
Estimated total fixed manufacturing overhead cost	\$22,000	\$11,500	\$33,500
Estimated variable manufacturing overhead cost per MH ...	\$1.80	\$3.00	

During the most recent month, the company started and completed two jobs--Job E and Job J. There were no beginning inventories. Data concerning those two jobs follow:

	Job E	Job J
Direct materials.....	\$12,800	\$7,000
Direct labor cost.....	\$17,600	\$7,700
Machining machine-hours	3,400	1,600
Customizing machine-hours.....	2,000	3,000

Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. If both jobs are sold during the month, the company's cost of goods sold for the month would be closest to:

- A) \$61,450
- B) \$41,150
- C) \$110,808
- D) \$102,600

Answer: D

Difficulty: 2 Medium

Learning Objective: 02-01

Learning Objective: 02-02

Learning Objective: 02-03

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

The first step is to calculate the estimated total overhead costs in the two departments.

Machining

Estimated fixed manufacturing overhead	\$22,000
Estimated variable manufacturing overhead (\$1.80 per MH × 5,000 MHs)	9,000
Estimated total manufacturing overhead cost	<u>\$31,000</u>

Customizing

Estimated fixed manufacturing overhead	\$11,500
Estimated variable manufacturing overhead (\$3.00 per MH × 5,000 MHs)	15,000
Estimated total manufacturing overhead cost	<u>\$26,500</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$31,000 + \$26,500 = \$57,500) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$57,500	
Estimated total machine hours	10,000	MHs
Predetermined overhead rate.....	\$5.75	per MH

The overhead applied to Job E is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job

= \$5.75 per MH x (3,400 MHs + 2,000 MHs)
 = \$5.75 per MH x (5,400 MHs)
 = \$31,050

Job E's manufacturing cost:

Direct materials.....	\$12,800
Direct labor cost.....	17,600
Manufacturing overhead applied	31,050
Total manufacturing cost	<u>\$61,450</u>

The overhead applied to Job J is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job

= \$5.75 per MH x (1,600 MHs + 3,000 MHs)
 = \$5.75 per MH x (4,600 MHs)
 = \$26,450

Job J's manufacturing cost:

Direct materials.....	\$7,000
Direct labor cost.....	7,700
Manufacturing overhead applied	26,450
Total manufacturing cost	<u>\$41,150</u>

Total manufacturing cost assigned to Job E	\$61,450
Total manufacturing cost assigned to Job J.....	41,150
	<u>\$102,60</u>
Cost of goods sold.....	<u>0</u>

[QUESTION]

54. Session Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on the following data:

Total direct labor-hours	70,000
Total fixed manufacturing overhead cost	\$511,000
Variable manufacturing overhead per direct labor-hour.....	\$2.10

Recently, Job K913 was completed with the following characteristics:

Total direct labor-hours	150
Direct materials.....	\$705
Direct labor cost.....	\$4,650

The total job cost for Job K913 is closest to:

- A) \$6,060
- B) \$2,115
- C) \$6,765
- D) \$5,355

Answer: C

Difficulty: 2 Medium

Learning Objective: 02-01

Learning Objective: 02-02

Learning Objective: 02-03

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$511,000 + (\$2.10 per direct labor-hour × 70,000 direct labor-hours) = \$511,000 + \$147,000 = \$658,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$658,000 ÷ 70,000 direct labor-hours = \$9.40 per direct labor-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$9.40 per direct labor-hour × 150 direct labor-hours = \$1,410

Direct materials.....	\$705
Direct labor	4,650
Manufacturing overhead applied	1,410
Total cost of Job K913.....	<u>\$6,765</u>

[QUESTION]

55. Pebbles Corporation has two manufacturing departments--Casting and Finishing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Casting	Finishing	Total
Estimated total machine-hours (MHs)	2,000	3,000	5,000
Estimated total fixed manufacturing overhead cost	\$9,800	\$6,300	\$16,100
Estimated variable manufacturing overhead cost per MH ...	\$2.00	\$2.40	

During the most recent month, the company started and completed two jobs--Job A and Job L. There were no beginning inventories. Data concerning those two jobs follow:

	Job A	Job L
Direct materials.....	\$15,400	\$9,600
Direct labor cost.....	\$24,900	\$6,200
Casting machine-hours	1,400	600
Finishing machine-hours	1,200	1,800

Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. The total manufacturing cost assigned to Job L is closest to:

- A) \$9,600
- B) \$6,200
- C) \$28,904
- D) \$13,104

Answer: C

Difficulty: 2 Medium

Learning Objective: 02-01

Learning Objective: 02-02

Learning Objective: 02-03

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

The first step is to calculate the estimated total overhead costs in the two departments.

Casting

Estimated fixed manufacturing overhead.....	\$9,800
---	---------

Estimated variable manufacturing overhead (\$2.00 per MH × 2,000 MHs)	4,000
Estimated total manufacturing overhead cost	<u>\$13,800</u>

Finishing

Estimated fixed manufacturing overhead	\$6,300
Estimated variable manufacturing overhead (\$2.40 per MH × 3,000 MHs)	7,200
Estimated total manufacturing overhead cost	<u>\$13,500</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$13,800 + \$13,500 = \$27,300) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$27,300	
Estimated total machine hours	5,000	MHs
Predetermined overhead rate.....	\$5.46	per MH

The overhead applied to Job L is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job
= \$5.46 per MH x (600 MHs + 1,800 MHs)
= \$5.46 per MH x (2,400 MHs)
= \$13,104

Job L's manufacturing cost:

Direct materials.....	\$9,600
Direct labor cost.....	6,200
Manufacturing overhead applied	13,104
Total manufacturing cost	<u>\$28,904</u>

[QUESTION]

56. Stockmaster Corporation has two manufacturing departments--Forming and Assembly. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Forming	Assembly	Total
Estimated total machine-hours (MHs)	5,000	5,000	10,000
Estimated total fixed manufacturing overhead cost	\$27,000	\$10,500	\$37,500
Estimated variable manufacturing overhead cost per MH ...	\$1.10	\$2.80	

During the most recent month, the company started and completed two jobs--Job C and Job H. There were no beginning inventories. Data concerning those two jobs follow:

	Job C	Job H
Direct materials.....	\$11,200	\$7,500
Direct labor cost.....	\$21,000	\$7,800
Forming machine-hours	3,400	1,600
Assembly machine-hours	2,000	3,000

Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours and uses a markup of 40% on manufacturing cost to establish selling prices. The calculated selling price for Job C is closest to:

- A) \$96,989
- B) \$88,172
- C) \$25,192
- D) \$62,980

Answer: B

Difficulty: 2 Medium

Learning Objective: 02-01

Learning Objective: 02-02

Learning Objective: 02-03

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

The first step is to calculate the estimated total overhead costs in the two departments.

Forming

Estimated fixed manufacturing overhead	\$27,000
Estimated variable manufacturing overhead (\$1.10 per MH × 5,000 MHs)	5,500
Estimated total manufacturing overhead cost	<u>\$32,500</u>

Assembly

Estimated fixed manufacturing overhead	\$10,500
Estimated variable manufacturing overhead (\$2.80 per MH × 5,000 MHs)	14,000
Estimated total manufacturing overhead cost	<u>\$24,500</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$32,500 + \$24,500 = \$57,000) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$57,000	
Estimated total machine hours	10,000	MHs
Predetermined overhead rate.....	\$5.70	per MH

The overhead applied to Job C is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job
= \$5.70 per MH x (3,400 MHs + 2,000 MHs)
= \$5.70 per MH x (5,400 MHs)
= \$30,780

Job C's manufacturing cost:

Direct materials.....	\$11,200
Direct labor cost.....	21,000
Manufacturing overhead applied	30,780
Total manufacturing cost	<u>\$62,980</u>

The selling price for Job C:

Total manufacturing cost	\$62,980
Markup (40%)	25,192
Selling price	<u>\$88,172</u>

[QUESTION]

57. Atteberry Corporation has two manufacturing departments--Machining and Finishing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Machining	Finishing	Total
Estimated total machine-hours (MHs)	6,000	4,000	10,000
Estimated total fixed manufacturing overhead cost	\$30,000	\$11,200	\$41,200
Estimated variable manufacturing overhead cost per MH ...	\$2.00	\$2.40	

During the most recent month, the company started and completed two jobs--Job E and Job L. There were no beginning inventories. Data concerning those two jobs follow:

	Job E	Job L
Direct materials.....	\$13,400	\$9,100
Direct labor cost.....	\$24,500	\$7,000
Machining machine-hours	4,100	1,900
Finishing machine-hours	1,600	2,400

Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. The total manufacturing cost assigned to Job E is closest to:

- A) \$24,500
- B) \$35,796
- C) \$13,400
- D) \$73,696

Answer: D

Difficulty: 2 Medium

Learning Objective: 02-01

Learning Objective: 02-02

Learning Objective: 02-03

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Fee The first step is to calculate the estimated total overhead costs in the two departments.

Machining

Estimated fixed manufacturing overhead.....	\$30,000
Estimated variable manufacturing overhead (\$2.00 per MH × 6,000 MHs)	12,000
Estimated total manufacturing overhead cost	<u>\$42,000</u>

Finishing

Estimated fixed manufacturing overhead.....	\$11,200
Estimated variable manufacturing overhead (\$2.40 per MH × 4,000 MHs)	9,600
Estimated total manufacturing overhead cost	<u>\$20,800</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$42,000 + \$20,800 = \$62,800) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$62,800	
Estimated total machine hours	10,000	MHs
Predetermined overhead rate.....	\$6.28	per MH

The overhead applied to Job E is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job

= \$6.28 per MH x (4,100 MHs + 1,600 MHs)

= \$6.28 per MH x (5,700 MHs)

= \$35,796

Job E's manufacturing cost:

Direct materials.....	\$13,400
Direct labor cost.....	24,500
Manufacturing overhead applied	35,796
Total manufacturing cost	<u>\$73,696</u>

[QUESTION]

58. Coates Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on total fixed manufacturing overhead cost of \$249,000, variable manufacturing overhead of \$3.80 per machine-hour, and 30,000 machine-hours. The company has provided the following data concerning Job X784 which was recently completed:

Number of units in the job	50
Total machine-hours.....	250
Direct materials.....	\$470
Direct labor cost.....	\$5,500

If the company marks up its unit product costs by 30% then the selling price for a unit in Job X784 is closest to:

- A) \$253.87
- B) \$233.87
- C) \$53.97
- D) \$155.22

Answer: B

Difficulty: 2 Medium

Learning Objective: 02-01

Learning Objective: 02-02

Learning Objective: 02-03

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

Feedback:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$249,000 + (\$3.80 per machine-hour × 30,000 machine-hours) = \$249,000 + \$114,000 = \$363,000
Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$363,000 ÷ 30,000 machine-hours = \$12.10 per machine-hour
Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$12.10 per machine-hour × 250 machine-hours = \$3,025

Direct materials.....	\$470
Direct labor	5,500
Manufacturing overhead applied	3,025
Total cost of Job X784.....	<u>\$8,995</u>

e. Total cost of Job X784 (a)	\$8,995
Number of units (b).....	50
Unit product cost (a) ÷ (b).....	\$179.90

Unit product cost for Job X784	\$179.90
Markup (30% × \$179.90).....	53.97
Selling price	<u>\$233.87</u>

[QUESTION]

59. Sutter Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours.....	10,000
Total fixed manufacturing overhead cost	\$35,000

Variable manufacturing overhead per machine-hour	\$2.20
--	--------

Recently, Job T369 was completed with the following characteristics:

Number of units in the job	10
Total machine-hours.....	40
Direct materials.....	\$750
Direct labor cost.....	\$1,560

If the company marks up its unit product costs by 20% then the selling price for a unit in Job T369 is closest to:

- A) \$324.56
- B) \$304.56
- C) \$277.20
- D) \$50.76

Answer: B

Difficulty: 2 Medium

Learning Objective: 02-01

Learning Objective: 02-02

Learning Objective: 02-03

Topic Area:

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$35,000 + (\$2.20 per machine-hour × 10,000 machine-hours) = \$35,000 + \$22,000 = \$57,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$57,000 ÷ 10,000 machine-hours = \$5.70 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$5.70 per machine-hour × 40 machine-hours = \$228

Direct materials.....	\$750
Direct labor	1,560
Manufacturing overhead applied	228
Total cost of Job T369	<u>\$2,538</u>

- | | |
|-------------------------------------|----------|
| e. Total cost of Job T369 (a) | \$2,538 |
| Number of units (b)..... | 10 |
| Unit product cost (a) ÷ (b)..... | \$253.80 |

Unit product cost for Job T369	\$253.80
Markup (20% × \$253.80)	50.76
Selling price	<u>\$304.56</u>

[QUESTION]

60. Doakes Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on the following data:

Total direct labor-hours	60,000
Total fixed manufacturing overhead cost	\$378,000
Variable manufacturing overhead per direct labor-hour.....	\$2.20

Recently, Job M843 was completed with the following characteristics:

Number of units in the job	60
Total direct labor-hours	120
Direct materials.....	\$630
Direct labor cost.....	\$2,400

The unit product cost for Job M843 is closest to:

- A) \$33.75
- B) \$67.50
- C) \$27.50
- D) \$50.50

Answer: B

Difficulty: 2 Medium

Feedback:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$155,000 + (\$3.40 per machine-hour × 50,000 machine-hours) = \$155,000 + \$170,000 = \$325,000
Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$325,000 ÷ 50,000 machine-hours = \$6.50 per machine-hour
Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$6.50 per machine-hour × 100 machine-hours = \$650

Direct materials.....	\$645
Direct labor	2,300
Manufacturing overhead applied	650
Total cost of Job A881	<u>\$3,595</u>

[QUESTION]

62. Tomey Corporation has two production departments, Forming and Finishing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Forming Department's predetermined overhead rate is based on machine-hours and the Finishing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Forming	Finishing
Machine-hours	18,000	14,000
Direct labor-hours	2,000	8,000
Total fixed manufacturing overhead cost	\$99,000	\$70,400
Variable manufacturing overhead per machine-hour	\$2.10	
Variable manufacturing overhead per direct labor-hour....		\$3.70

During the current month the company started and finished Job T617. The following data were recorded for this job:

Job T617:	Forming	Finishing
Machine-hours	90	20
Direct labor-hours	30	60
Direct materials.....	\$940	\$350
Direct labor cost.....	\$960	\$1,920

The total job cost for Job T617 is closest to:

A) \$5,604

B) \$2,584

C) \$684

D) \$3,020

Answer: A

Difficulty: 2 Medium

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Forming Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)

= \$99,000 + (\$2.10 per machine-hour × 18,000 machine-hours)

= \$99,000 + \$37,800 = \$136,800

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$136,800 ÷ 18,000 machine-hours = \$7.60 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$7.60 per machine-hour × 90 machine-hours = \$684

Finishing Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)

= \$70,400 + (\$3.70 per direct labor-hour × 8,000 direct labor-hours)

= \$70,400 + \$29,600 = \$100,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$100,000 ÷ 8,000 direct labor-hours = \$12.50 per direct labor-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$12.50 per direct labor-hour × 60 direct labor-hours = \$750

	Forming	Finishing	Total
Direct materials.....	\$940	\$350	\$1,290
Direct labor	\$960	\$1,920	2,880
Manufacturing overhead applied ...	\$684	\$750	1,434
Total cost of Job T617			<u>\$5,604</u>

[QUESTION]

63. Molash Corporation has two manufacturing departments--Machining and Assembly. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Machining	Assembly	Total
Estimated total machine-hours (MHs)	2,000	3,000	5,000
Estimated total fixed manufacturing overhead cost	\$9,400	\$8,100	\$17,500
Estimated variable manufacturing overhead cost per MH ...	\$1.80	\$2.40	

During the most recent month, the company started and completed two jobs--Job B and Job L. There were no beginning inventories. Data concerning those two jobs follow:

	Job B	Job L
Direct materials.....	\$14,400	\$7,100
Direct labor cost.....	\$23,500	\$6,700
Machining machine-hours	1,400	600
Assembly machine-hours	1,200	1,800

Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both production departments. Further assume that the company uses a markup of 50% on manufacturing cost to establish selling prices. The calculated selling price for Job L is closest to:

A) \$40,320

B) \$41,933

C) \$13,440

D) \$26,880

Answer: A

Difficulty: 2 Medium

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Machining Department predetermined overhead rate:

Estimated fixed manufacturing overhead	\$9,400	
Estimated variable manufacturing overhead (\$1.80 per MH × 2,000 MHs)	3,600	
Estimated total manufacturing overhead cost (a)	<u>\$13,000</u>	
Estimated total machine-hours (b)	2,000	MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$6.50	per MH

Assembly Department predetermined overhead rate:

Estimated fixed manufacturing overhead	\$8,100	
Estimated variable manufacturing overhead (\$2.40 per MH × 3,000 MHs)	7,200	
Estimated total manufacturing overhead cost (a)	<u>\$15,300</u>	
Estimated total machine-hours (b)	3,000	MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$5.10	per MH

Manufacturing overhead applied to Job L:

Machining (\$6.50 per MH × 600 MHs)	\$3,900
Assembly (\$5.10 per MH × 1,800 MHs)	9,180
Total manufacturing overhead applied	<u>\$13,080</u>

The selling price for Job L would be calculated as follows:

Direct materials	\$7,100
Direct labor cost	6,700
Manufacturing overhead applied	13,080
Total manufacturing cost	<u>\$26,880</u>
Markup (50%)	13,440
Selling price	<u>\$40,320</u>

[QUESTION]

64. Columbo Corporation has two production departments, Forming and Finishing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Forming Department's predetermined overhead rate is based on machine-hours and the Finishing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Forming	Finishing
Machine-hours	17,000	10,000
Direct labor-hours	1,000	9,000
Total fixed manufacturing overhead cost	\$110,500	\$78,300
Variable manufacturing overhead per machine-hour	\$1.60	
Variable manufacturing overhead per direct labor-hour		\$3.30

During the current month the company started and finished Job A948. The following data were recorded for this job:

Job A948:	Forming	Finishing
Machine-hours.....	70	30
Direct labor-hours.....	10	50
Direct materials.....	\$650	\$330
Direct labor cost.....	\$380	\$1,900

If the company marks up its manufacturing costs by 40% then the selling price for Job A948 would be closest to:

- A) \$6,197.80
- B) \$1,770.80
- C) \$4,427.00

Total manufacturing overhead applied	<u><u>\$13,500</u></u>

[QUESTION]

67. Boward Corporation has two production departments, Milling and Assembly. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Milling Department's predetermined overhead rate is based on machine-hours and the Assembly Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Milling	Assembly
Machine-hours	18,000	12,000
Direct labor-hours	2,000	7,000
Total fixed manufacturing overhead cost	\$120,600	\$76,300
Variable manufacturing overhead per machine-hour	\$2.00	
Variable manufacturing overhead per direct labor-hour		\$4.30

During the current month the company started and finished Job T818. The following data were recorded for this job:

Job T818:	Milling	Assembly
Machine-hours	50	30
Direct labor-hours	10	40

The total amount of overhead applied in both departments to Job T818 is closest to:

- A) \$1,651
- B) \$608
- C) \$435
- D) \$1,043

Answer: D

Difficulty: 2 Medium

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Milling Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)

= \$120,600 + (\$2.00 per machine-hour × 18,000 machine-hours)

= \$120,600 + \$36,000 = \$156,600

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$156,600 ÷ 18,000 machine-hours = \$8.70 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$8.70 per machine-hour × 50 machine-hours = \$435

Assembly Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)

= \$76,300 + (\$4.30 per direct labor-hour × 7,000 direct labor-hours)

= \$76,300 + \$30,100 = \$106,400

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$106,400 ÷ 7,000 direct labor-hours = \$15.20 per direct labor-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$15.20 per direct labor-hour × 40 direct labor-hours = \$608

Overhead applied to Job T818

Milling Department	\$435
Assembly Department	608
Total.....	<u>\$1,043</u>

[QUESTION]

68. Malakan Corporation has two production departments, Machining and Finishing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Machining Department's predetermined overhead rate is based on machine-hours and the Finishing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Machining	Finishing
Machine-hours	18,000	11,000
Direct labor-hours	2,000	9,000
Total fixed manufacturing overhead cost	\$102,600	\$96,300
Variable manufacturing overhead per machine-hour	\$2.10	
Variable manufacturing overhead per direct labor-hour....		\$3.90

During the current month the company started and finished Job K368. The following data were recorded for this job:

Job K368:	Machining	Finishing
Machine-hours	80	30
Direct labor-hours	20	40

The amount of overhead applied in the Machining Department to Job K368 is closest to:

- A) \$856.00
- B) \$168.00
- C) \$624.00
- D) \$140,400.00

Answer: C

Difficulty: 1 Easy

Learning Objective: 02-01

Learning Objective: 02-02

Learning Objective: 02-04

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Machining Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)

= \$102,600 + (\$2.10 per machine-hour × 18,000 machine-hours)

= \$102,600 + \$37,800 = \$140,400

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$140,400 ÷ 18,000 machine-hours = \$7.80 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$7.80 per machine-hour × 80 machine-hours = \$624

[QUESTION]

69. Mahon Corporation has two production departments, Casting and Customizing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Casting Department's predetermined overhead rate is based on machine-hours and the Customizing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Casting	Customizing
Machine-hours	18,000	14,000
Direct labor-hours	2,000	7,000
Total fixed manufacturing overhead cost	\$124,200	\$68,600
Variable manufacturing overhead per machine-hour	\$1.90	
Variable manufacturing overhead per direct labor-hour....		\$3.80

During the current month the company started and finished Job T138. The following data were recorded for this job:

Job T138:	Casting	Customizing
Machine-hours	70	30
Direct labor-hours	10	60

The amount of overhead applied in the Customizing Department to Job T138 is closest to:

- A) \$588.00
- B) \$95,200.00
- C) \$816.00
- D) \$228.00

Answer: C

Difficulty: 1 Easy

Learning Objective: 02-01

Learning Objective: 02-02

Learning Objective: 02-04

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Customizing Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)

= \$68,600 + (\$3.80 per direct labor-hour × 7,000 direct labor-hours)

= \$68,600 + \$26,600 = \$95,200

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$95,200 ÷ 7,000 direct labor-hours = \$13.60 per direct labor-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$13.60 per direct labor-hour × 60 direct labor-hours = \$816

[QUESTION]

70. Marioni Corporation has two manufacturing departments--Forming and Assembly. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Forming	Assembly	Total
Estimated total machine-hours (MHs)	7,000	3,000	10,000
Estimated total fixed manufacturing overhead cost	\$37,100	\$9,000	\$46,100
Estimated variable manufacturing overhead cost per MH ...	\$1.70	\$2.60	

During the most recent month, the company started and completed two jobs--Job B and Job H. There were no beginning inventories. Data concerning those two jobs follow:

	Job B	Job H
Forming machine-hours	4,800	2,200
Assembly machine-hours	1,200	1,800

Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both production departments. The manufacturing overhead applied to Job B is closest to:

- A) \$6,720
- B) \$33,600
- C) \$40,320
- D) \$39,480

Answer: C

Difficulty: 2 Medium

Learning Objective: 02-01

Feedback:

Forming Department predetermined overhead rate:

Estimated fixed manufacturing overhead.....	\$37,100	
Estimated variable manufacturing overhead (\$1.70 per MH × 7,000 MHs).....	11,900	
Estimated total manufacturing overhead cost (a).....	<u>\$49,000</u>	
Estimated total machine-hours (b)	7,000	MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$7.00	per MH

Assembly Department predetermined overhead rate:

Estimated fixed manufacturing overhead.....	\$9,000	
Estimated variable manufacturing overhead (\$2.60 per MH × 3,000 MHs).....	7,800	
Estimated total manufacturing overhead cost (a).....	<u>\$16,800</u>	
Estimated total machine-hours (b)	3,000	MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$5.60	per MH

Manufacturing overhead applied to Job B:

Forming (\$7.00 per MH × 4,800 MHs)	\$33,600
Assembly (\$5.60 per MH × 1,200 MHs)	6,720
Total manufacturing overhead applied	<u>\$40,320</u>

[QUESTION]

71. Bassett Corporation has two production departments, Milling and Customizing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Milling Department's predetermined overhead rate is based on machine-hours and the Customizing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Milling	Customizing
Machine-hours.....	16,000	12,000
Direct labor-hours	2,000	8,000
Total fixed manufacturing overhead cost	\$118,400	\$87,200
Variable manufacturing overhead per machine-hour	\$2.10	
Variable manufacturing overhead per direct labor-hour....		\$3.30

The predetermined overhead rate for the Milling Department is closest to:

- A) \$19.00 per machine-hour
- B) \$2.10 per machine-hour
- C) \$9.50 per machine-hour
- D) \$7.40 per machine-hour

Answer: C

Difficulty: 1 Easy

Learning Objective: 02-01

Learning Objective: 02-04

Feedback:

Milling Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)

= \$118,400 + (\$2.10 per machine-hour × 16,000 machine-hours)

= \$118,400 + \$33,600 = \$152,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$152,000 ÷ 16,000 machine-hours = \$9.50 per machine-hour

[QUESTION]

72. Fatzinger Corporation has two production departments, Milling and Assembly. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Milling Department's predetermined overhead rate is based on machine-hours and the Assembly Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Milling	Assembly
Machine-hours	20,000	14,000
Direct labor-hours	2,000	7,000
Total fixed manufacturing overhead cost	\$132,000	\$57,400
Variable manufacturing overhead per machine-hour	\$2.30	
Variable manufacturing overhead per direct labor-hour		\$3.40

The predetermined overhead rate for the Assembly Department is closest to:

- A) \$8.20 per direct labor-hour
- B) \$3.40 per direct labor-hour
- C) \$4.06 per direct labor-hour
- D) \$11.60 per direct labor-hour

Answer: D

Difficulty: 1 Easy

Learning Objective: 02-01

Learning Objective: 02-04

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Assembly Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)

= \$57,400 + (\$3.40 per direct labor-hour × 7,000 direct labor-hours)

= \$57,400 + \$23,800 = \$81,200

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$81,200 ÷ 7,000 direct labor-hours = \$11.60 per direct labor-hour

[QUESTION]

73. Swango Corporation has two production departments, Casting and Customizing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Casting Department's predetermined overhead rate is based on machine-hours and the Customizing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

Casting Customizing

Machine-hours	19,000	11,000
Direct labor-hours	1,000	8,000
Total fixed manufacturing overhead cost	\$138,700	\$86,400
Variable manufacturing overhead per machine-hour	\$1.60	
Variable manufacturing overhead per direct labor-hour		\$3.00

The estimated total manufacturing overhead for the Customizing Department is closest to:

- A) \$24,000
- B) \$110,400
- C) \$86,400
- D) \$60,379

Answer: B

Difficulty: 1 Easy

Feedback:

Manufacturing overhead applied to Work in Process:

	Fabrication	Assembly	Total
Predetermined overhead rate (a)	\$30 per MH	\$12 per DLH	
Actual total amount of the allocation base (b)	40 MHs	25 DLHs	
Manufacturing overhead applied (a) × (b)	\$1,200	\$300	\$1,500

[QUESTION]

78. Sargent Corporation applies overhead cost to jobs on the basis of 80% of direct labor cost. If Job 210 shows \$10,000 of manufacturing overhead cost applied, how much was the direct labor cost on the job?

- A) \$12,500
- B) \$11,000
- C) \$8,000
- D) \$10,000

Answer: A

Difficulty: 2 Medium

Learning Objective: 02-02

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Manufacturing overhead applied = Predetermined overhead rate × Amount of the allocation base incurred

\$10,000 = 0.80 × Direct labor cost

Direct labor cost = \$10,000 ÷ 0.80 = \$12,500

[QUESTION]

79. Kreuzer Corporation is using a predetermined overhead rate of \$22.30 per machine-hour that was based on estimated total fixed manufacturing overhead of \$446,000 and 20,000 machine-hours for the period. The company incurred actual total fixed manufacturing overhead of \$409,000 and 18,200 total machine-hours during the period. The amount of manufacturing overhead that would have been applied to all jobs during the period is closest to:

A) \$446,000

B) \$37,000

C) \$372,190

D) \$405,860

Answer: D

Direct materials	\$3,044
Direct labor (46 direct labor-hours × \$15.00 per direct labor-hour).....	690
Overhead (104 machine-hours × \$13.00 per machine-hour).....	<u>1,352</u>
Total manufacturing cost for Job 450	<u>\$5,086</u>

Reference: CH02-Ref1

Dejarnette Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours.....	80,000
Total fixed manufacturing overhead cost	\$416,000
Variable manufacturing overhead per machine-hour	\$3.10

[QUESTION]

84. The estimated total manufacturing overhead is closest to:

- A) \$416,003
- B) \$248,000
- C) \$664,000
- D) \$416,000

Answer: C

Difficulty: 1 Easy

Learning Objective: 02-01

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref1

Feedback:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$416,000 + (\$3.10 per machine-hour × 80,000 machine-hours) = \$416,000 + \$248,000 = \$664,000

[QUESTION]

85. The predetermined overhead rate is closest to:

- A) \$8.30 per machine-hour
- B) \$11.40 per machine-hour
- C) \$5.20 per machine-hour
- D) \$3.10 per machine-hour

Answer: A

Difficulty: 1 Easy

Learning Objective: 02-01

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref1

Feedback:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$416,000 + (\$3.10 per machine-hour × 80,000 machine-hours) = \$416,000 + \$248,000 = \$664,000
Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$664,000 ÷ 80,000 machine-hours = \$8.30 per machine-hour

Reference: CH02-Ref2

Odonnel Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on total fixed manufacturing overhead cost of \$36,000, variable manufacturing overhead of \$2.80 per direct labor-hour, and 10,000 direct labor-hours.

[QUESTION]

86. The estimated total manufacturing overhead is closest to:

- A) \$64,000
- B) \$36,000
- C) \$28,000
- D) \$36,003

Answer: A

Difficulty: 1 Easy

Learning Objective: 02-01

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref2

Feedback:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$36,000 + (\$2.80 per direct labor-hour × 10,000 direct labor-hours) = \$36,000 + \$28,000 = \$64,000

[QUESTION]

87. The predetermined overhead rate is closest to:

A) \$2.80 per direct labor-hour

B) \$6.40 per direct labor-hour

C) \$3.60 per direct labor-hour

D) \$9.20 per direct labor-hour

Answer: B

Difficulty: 1 Easy

Learning Objective: 02-01

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref2

Feedback:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$36,000 + (\$2.80 per direct labor-hour × 10,000 direct labor-hours) = \$36,000 + \$28,000 = \$64,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$64,000 ÷ 10,000 direct labor-hours = \$6.40 per direct labor-hour

Reference: CH02-Ref3

Morataya Corporation has two manufacturing departments--Machining and Assembly. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Machining	Assembly	Total
Estimated total machine-hours (MHs)	7,000	3,000	10,000
Estimated total fixed manufacturing overhead cost	\$39,200	\$6,600	\$45,800
Estimated variable manufacturing overhead cost per MH ...	\$1.90	\$2.10	

During the most recent month, the company started and completed two jobs--Job B and Job G. There were no beginning inventories. Data concerning those two jobs follow:

	Job B	Job G
Direct materials.....	\$14,800	\$8,300
Direct labor cost.....	\$22,000	\$8,900
Machining machine-hours	4,800	2,200
Assembly machine-hours	1,200	1,800

[QUESTION]

88. Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. That predetermined manufacturing overhead rate is closest to:

A) \$4.00

B) \$7.50

C) \$4.58

D) \$6.54

Answer: D

Difficulty: 2 Medium

Learning Objective: 02-01

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref3

Feedback:

The first step is to calculate the estimated total overhead costs in the two departments.

Machining

Estimated fixed manufacturing overhead	\$39,200
Estimated variable manufacturing overhead (\$1.90 per MH × 7,000 MHs)	13,300
Estimated total manufacturing overhead cost	<u>\$52,500</u>

Assembly

Estimated fixed manufacturing overhead	\$6,600
Estimated variable manufacturing overhead (\$2.10 per MH × 3,000 MHs)	6,300
Estimated total manufacturing overhead cost	<u>\$12,900</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$52,500 + \$12,900 = \$65,400) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$65,400	
Estimated total machine hours	10,000	MHs
Predetermined overhead rate.....	\$6.54	per MH

[QUESTION]

89. Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. The amount of manufacturing overhead applied to Job B is closest to:

A) \$31,392

B) \$27,480

C) \$39,240

D) \$7,848

Answer: C

Difficulty: 2 Medium

Learning Objective: 02-01

Learning Objective: 02-02

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref3

Feedback:

The first step is to calculate the estimated total overhead costs in the two departments.

Machining

Estimated fixed manufacturing overhead	\$39,200
Estimated variable manufacturing overhead (\$1.90 per MH × 7,000 MHs)	<u>13,300</u>

Estimated total manufacturing overhead cost	<u>\$52,500</u>
Assembly	
Estimated fixed manufacturing overhead	\$6,600
Estimated variable manufacturing overhead (\$2.10 per MH × 3,000 MHs)	<u>6,300</u>
Estimated total manufacturing overhead cost	<u>\$12,900</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$52,500 + \$12,900 = \$65,400) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$65,400	
Estimated total machine hours	10,000	MHs
Predetermined overhead rate.....	\$6.54	per MH

The overhead applied to Job B is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job
= \$6.54 per MH x (4,800 MHs + 1,200 MHs)
= \$6.54 per MH x (6,000 MHs)
= \$39,240

[QUESTION]

90. Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. The amount of manufacturing overhead applied to Job G is closest to:

- A) \$14,388
- B) \$26,160
- C) \$11,772
- D) \$18,320

Answer: B

Difficulty: 2 Medium

Learning Objective: 02-01

Learning Objective: 02-02

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref3

Feedback:

The first step is to calculate the estimated total overhead costs in the two departments.

Machining	
Estimated fixed manufacturing overhead	\$39,200
Estimated variable manufacturing overhead (\$1.90 per MH × 7,000 MHs)	<u>13,300</u>
Estimated total manufacturing overhead cost	<u>\$52,500</u>

Assembly	
Estimated fixed manufacturing overhead	\$6,600
Estimated variable manufacturing overhead (\$2.10 per MH × 3,000 MHs)	<u>6,300</u>
Estimated total manufacturing overhead cost	<u>\$12,900</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$52,500 + \$12,900 = \$65,400) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$65,400	
Estimated total machine hours	10,000	MHs

Predetermined overhead rate..... \$6.54 per MH

The overhead applied to Job G is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job
= \$6.54 per MH x (2,200 MHs + 1,800 MHs)
= \$6.54 per MH x (4,000 MHs)
= \$26,160

Reference: CH02-Ref4

Housholder Corporation uses a predetermined overhead rate base on machine-hours that it recalculates at the beginning of each year. The company has provided the following data for the most recent year.

Estimated total fixed manufacturing overhead from the beginning of the year	\$310,000	
Estimated activity level from the beginning of the year	20,000	machine-hours
Actual total fixed manufacturing overhead	\$338,000	
Actual activity level	18,300	machine-hours

[QUESTION]

91. The predetermined overhead rate is closest to:

- A) \$18.47
- B) \$16.94
- C) \$16.90
- D) \$15.50

Answer: D

Estimated total fixed manufacturing overhead (a)...	\$310,000
Estimated activity level (b).....	20,000
Predetermined overhead rate (a) ÷ (b).....	\$15.50
Actual activity level	18,300
Manufacturing overhead applied	\$283,650

Reference: CH02-Ref5

Gerstein Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on total fixed manufacturing overhead cost of \$90,000, variable manufacturing overhead of \$3.70 per direct labor-hour, and 50,000 direct labor-hours. The company recently completed Job M800 which required 150 direct labor-hours.

[QUESTION]

93. The estimated total manufacturing overhead is closest to:

- A) \$90,000
- B) \$275,000
- C) \$185,000
- D) \$90,004

Answer: B

Difficulty: 1 Easy

Learning Objective: 02-01

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref5

Feedback:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$90,000 + (\$3.70 per direct labor-hour × 50,000 direct labor-hours) = \$90,000 + \$185,000 = \$275,000

[QUESTION]

94. The predetermined overhead rate is closest to:

- A) \$1.80 per direct labor-hour
- B) \$5.50 per direct labor-hour
- C) \$9.20 per direct labor-hour
- D) \$3.70 per direct labor-hour

Answer: B

Difficulty: 1 Easy

Learning Objective: 02-01

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref5

Feedback:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$90,000 + (\$3.70 per direct labor-hour × 50,000 direct labor-hours) = \$90,000 + \$185,000 = \$275,000
Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$275,000 ÷ 50,000 direct labor-hours = \$5.50 per direct labor-hour

[QUESTION]

95. The amount of overhead applied to Job M800 is closest to:

- A) \$270
- B) \$1,380
- C) \$825
- D) \$555

Answer: C

Difficulty: 1 Easy

Learning Objective: 02-01

Learning Objective: 02-02

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref5

Feedback:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$90,000 + (\$3.70 per direct labor-hour × 50,000 direct labor-hours) = \$90,000 + \$185,000 = \$275,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$275,000 ÷ 50,000 direct labor-hours = \$5.50 per direct labor-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$5.50 per direct labor-hour × 150 direct labor-hours = \$825

Reference: CH02-Ref6

Krier Corporation uses a predetermined overhead rate that was based on estimated total fixed manufacturing overhead of \$738,000 and 30,000 direct labor-hours for the period. The company incurred actual total fixed manufacturing overhead of \$792,000 and 31,500 total direct labor-hours during the period.

[QUESTION]

96. The predetermined overhead rate is closest to:

- A) \$26.40
- B) \$25.14

Opunui Corporation has two manufacturing departments--Molding and Finishing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Molding	Finishing	Total
Estimated total machine-hours (MHs)	4,000	1,000	5,000
Estimated total fixed manufacturing overhead cost	\$19,600	\$2,400	\$22,000
Estimated variable manufacturing overhead cost per MH ...	\$1.10	\$2.10	

During the most recent month, the company started and completed two jobs--Job A and Job M. There were no beginning inventories. Data concerning those two jobs follow:

	Job A	Job M
Direct materials.....	\$13,600	\$7,500
Direct labor cost.....	\$20,700	\$7,400
Molding machine-hours	2,700	1,300
Finishing machine-hours	400	600

[QUESTION]

112. Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. The total manufacturing cost assigned to Job M is closest to:

- A) \$10,830
- B) \$7,400
- C) \$25,730
- D) \$7,500

Answer: C

Difficulty: 2 Medium

Learning Objective: 02-01

Learning Objective: 02-02

Learning Objective: 02-03

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref11

Feedback:

The first step is to calculate the estimated total overhead costs in the two departments.

Molding

Estimated fixed manufacturing overhead	\$19,600
Estimated variable manufacturing overhead (\$1.10 per MH × 4,000 MHs)	4,400
Estimated total manufacturing overhead cost	<u>\$24,000</u>

Finishing

Estimated fixed manufacturing overhead	\$2,400
Estimated variable manufacturing overhead (\$2.10 per MH × 1,000 MHs)	2,100
Estimated total manufacturing overhead cost	<u>\$4,500</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$24,000 + \$4,500 = \$28,500) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$28,500	
Estimated total machine hours	5,000	MHs
Predetermined overhead rate.....	\$5.70	per MH

The overhead applied to Job M is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job
= \$5.70 per MH x (1,300 MHs + 600 MHs)
= \$5.70 per MH x (1,900 MHs)
= \$10,830

Job M's manufacturing cost:

Direct materials.....	\$7,500
Direct labor cost.....	7,400

Manufacturing overhead applied	10,830
Total manufacturing cost	<u>\$25,730</u>

[QUESTION]

113. Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours and uses a markup of 40% on manufacturing cost to establish selling prices. The calculated selling price for Job A is closest to:

- A) \$51,970
- B) \$72,758
- C) \$80,034
- D) \$20,788

Answer: B

Difficulty: 2 Medium

Learning Objective: 02-01

Learning Objective: 02-02

Learning Objective: 02-03

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref11

Feedback:

The first step is to calculate the estimated total overhead costs in the two departments.

Molding

Estimated fixed manufacturing overhead	\$19,600
Estimated variable manufacturing overhead (\$1.10 per MH × 4,000 MHs)	4,400
Estimated total manufacturing overhead cost	<u>\$24,000</u>

Finishing

Estimated fixed manufacturing overhead	\$2,400
Estimated variable manufacturing overhead (\$2.10 per MH × 1,000 MHs)	2,100
Estimated total manufacturing overhead cost	<u>\$4,500</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$24,000 + \$4,500 = \$28,500) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$28,500	
Estimated total machine hours	5,000	MHs
Predetermined overhead rate.....	\$5.70	per MH

The overhead applied to Job A is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job

= \$5.70 per MH x (2,700 MHs + 400 MHs)

= \$5.70 per MH x (3,100 MHs)

= \$17,670

Job A's manufacturing cost:

Direct materials.....	\$13,600
Direct labor cost.....	20,700
Manufacturing overhead applied.....	17,670
Total manufacturing cost.....	<u>\$51,970</u>

The selling price for Job A:

Total manufacturing cost	\$51,970
Markup (40%)	20,788
Selling price	<u>\$72,758</u>

Reference: CH02-Ref12

Lueckenhoff Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on total fixed manufacturing overhead cost of \$497,000, variable manufacturing overhead of \$2.40 per direct labor-hour, and 70,000 direct labor-hours. The company has provided the following data concerning Job T498 which was recently completed:

Number of units in the job	40
Total direct labor-hours	80
Direct materials.....	\$950
Direct labor cost.....	\$2,720

[QUESTION]

114. The estimated total manufacturing overhead is closest to:

- A) \$665,000
- B) \$497,002
- C) \$497,000
- D) \$168,000

Nielsen Corporation has two manufacturing departments--Machining and Assembly. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Machining	Assembly	Total
Estimated total machine-hours (MHs)	1,000	4,000	5,000
Estimated total fixed manufacturing overhead cost	\$4,700	\$10,800	\$15,500
Estimated variable manufacturing overhead cost per MH ...	\$1.20	\$2.20	

During the most recent month, the company started and completed two jobs--Job F and Job M. There were no beginning inventories. Data concerning those two jobs follow:

	Job F	Job M
Direct materials.....	\$13,000	\$7,400
Direct labor cost.....	\$20,400	\$8,800
Machining machine-hours	700	300
Assembly machine-hours	1,600	2,400

[QUESTION]

119. Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. The total manufacturing cost assigned to Job F is closest to:

- A) \$13,000
- B) \$20,400
- C) \$45,130
- D) \$11,730

Answer: C

Difficulty: 2 Medium

Learning Objective: 02-01

Learning Objective: 02-02

Learning Objective: 02-03

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref13

Fee The first step is to calculate the estimated total overhead costs in the two departments.

Machining

Estimated fixed manufacturing overhead	\$4,700
Estimated variable manufacturing overhead (\$1.20 per MH × 1,000 MHs)	1,200
Estimated total manufacturing overhead cost	<u>\$5,900</u>

Assembly

Estimated fixed manufacturing overhead	\$10,800
Estimated variable manufacturing overhead (\$2.20 per MH × 4,000 MHs)	8,800
Estimated total manufacturing overhead cost	<u>\$19,600</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$5,900 + \$19,600 = \$25,500) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$25,500	
Estimated total machine hours	5,000	MHs
Predetermined overhead rate.....	\$5.10	per MH

The overhead applied to Job F is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate × Machine-hours incurred by the job

= \$5.10 per MH × (700 MHs + 1,600 MHs)

= \$5.10 per MH × (2,300 MHs)

= \$11,730

Job F's manufacturing cost:

Direct materials.....	\$13,000
Direct labor cost.....	20,400
Manufacturing overhead applied	11,730
Total manufacturing cost	<u>\$45,130</u>

[QUESTION]

120. Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours and uses a markup of 40% on manufacturing cost to establish selling prices. The calculated selling price for Job M is closest to:

- A) \$46,154
- B) \$41,958
- C) \$29,970
- D) \$11,988

Answer: B

Difficulty: 2 Medium

Learning Objective: 02-01

Learning Objective: 02-02

Learning Objective: 02-03

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

[QUESTION]

125. The predetermined overhead rate is closest to:

- A) \$5.50 per direct labor-hour
- B) \$8.30 per direct labor-hour
- C) \$2.80 per direct labor-hour
- D) \$2.70 per direct labor-hour

Answer: A

Difficulty: 1 Easy

Learning Objective: 02-01

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref15

Feedback:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$162,000 + (\$2.80 per direct labor-hour × 60,000 direct labor-hours) = \$162,000 + \$168,000 = \$330,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$330,000 ÷ 60,000 direct labor-hours = \$5.50 per direct labor-hour

[QUESTION]

126. The amount of overhead applied to Job K818 is closest to:

- A) \$135
- B) \$140
- C) \$415
- D) \$275

Answer: D

Difficulty: 1 Easy

Learning Objective: 02-01

Learning Objective: 02-02

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref15

Feedback:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$162,000 + (\$2.80 per direct labor-hour × 60,000 direct labor-hours) = \$162,000 + \$168,000 = \$330,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$330,000 ÷ 60,000 direct labor-hours = \$5.50 per direct labor-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$5.50 per direct labor-hour × 50 direct labor-hours = \$275

[QUESTION]

127. The total job cost for Job K818 is closest to:

- A) \$1,675
- B) \$2,595
- C) \$1,195
- D) \$2,320

Answer: B

Difficulty: 2 Medium

Learning Objective: 02-01

Reference: CH02-Ref16

Lupo Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours.....	30,000
Total fixed manufacturing overhead cost	\$252,000
Variable manufacturing overhead per machine-hour	\$2.10

Recently, Job T687 was completed with the following characteristics:

Number of units in the job	10
Total machine-hours.....	30
Direct materials.....	\$675
Direct labor cost.....	\$1,050

[QUESTION]

130. The estimated total manufacturing overhead is closest to:

- A) \$315,000
- B) \$252,000
- C) \$252,002
- D) \$63,000

Answer: A

Difficulty: 1 Easy

Ronson Corporation has two manufacturing departments--Casting and Customizing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Casting	Customizing	Total
Estimated total machine-hours (MHs)	5,000	5,000	10,000
Estimated total fixed manufacturing overhead cost	\$27,500	\$10,500	\$38,000
Estimated variable manufacturing overhead cost per MH ...	\$1.70	\$2.60	

During the most recent month, the company started and completed two jobs--Job C and Job G. There were no beginning inventories. Data concerning those two jobs follow:

	Job C	Job G
Direct materials.....	\$10,600	\$6,800
Direct labor cost.....	\$23,700	\$7,900
Casting machine-hours	3,400	1,600
Customizing machine-hours.....	2,000	3,000

[QUESTION]

136. Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. The amount of manufacturing overhead applied to Job C is closest to:

- A) \$32,130
- B) \$11,900
- C) \$20,230
- D) \$20,520

Answer: A

Difficulty: 2 Medium

Learning Objective: 02-01

Learning Objective: 02-02

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref17

Feedback:

The first step is to calculate the estimated total overhead costs in the two departments.

Casting

Estimated fixed manufacturing overhead	\$27,500
Estimated variable manufacturing overhead (\$1.70 per MH × 5,000 MHs)	8,500
Estimated total manufacturing overhead cost	<u>\$36,000</u>

Customizing

Estimated fixed manufacturing overhead	\$10,500
Estimated variable manufacturing overhead (\$2.60 per MH × 5,000 MHs)	13,000
Estimated total manufacturing overhead cost	<u>\$23,500</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$36,000 + \$23,500 = \$59,500) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$59,500	
Estimated total machine hours	10,000	MHs
Predetermined overhead rate.....	\$5.95	per MH

The overhead applied to Job C is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job
= \$5.95 per MH x (3,400 MHs + 2,000 MHs)
= \$5.95 per MH x (5,400 MHs)
= \$32,130

[QUESTION]

137. Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. The total manufacturing cost assigned to Job G is closest to:

- A) \$42,070

B) \$27,370

C) \$6,800

D) \$7,900

Answer: A

Difficulty: 2 Medium

Learning Objective: 02-01

Learning Objective: 02-02

Learning Objective: 02-03

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref17

Feedback:

The first step is to calculate the estimated total overhead costs in the two departments.

Casting

Estimated fixed manufacturing overhead	\$27,500
Estimated variable manufacturing overhead (\$1.70 per MH × 5,000 MHs)	8,500
Estimated total manufacturing overhead cost	<u>\$36,000</u>

Customizing

Estimated fixed manufacturing overhead	\$10,500
Estimated variable manufacturing overhead (\$2.60 per MH × 5,000 MHs)	13,000
Estimated total manufacturing overhead cost	<u>\$23,500</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$36,000 + \$23,500 = \$59,500) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$59,500	
Estimated total machine hours	10,000	MHs
Predetermined overhead rate	\$5.95	per MH

The overhead applied to Job G is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job
= \$5.95 per MH x (1,600 MHs + 3,000 MHs)
= \$5.95 per MH x (4,600 MHs)
= \$27,370

Job G's manufacturing cost:

Direct materials	\$6,800
Direct labor cost	7,900
Manufacturing overhead applied	27,370
Total manufacturing cost	<u>\$42,070</u>

Reference: CH02-Ref18

Sivret Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours	80,000
Total fixed manufacturing overhead cost	\$624,000
Variable manufacturing overhead per machine-hour	\$3.10

Recently, Job M598 was completed with the following characteristics:

Number of units in the job	60
Total machine-hours.....	300
Direct materials.....	\$645
Direct labor cost.....	\$9,000

[QUESTION]

138. The amount of overhead applied to Job M598 is closest to:

- A) \$930
- B) \$4,200
- C) \$2,340
- D) \$3,270

Answer: D

Feedback:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$58,000 + (\$2.00 per machine-hour × 20,000 machine-hours) = \$58,000 + \$40,000 = \$98,000
Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$98,000 ÷ 20,000 machine-hours = \$4.90 per machine-hour

[QUESTION]

143. The amount of overhead applied to Job P978 is closest to:

- A) \$232
- B) \$160
- C) \$392
- D) \$552

Answer: C

Difficulty: 1 Easy

Learning Objective: 02-01

Learning Objective: 02-02

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref19

Feedback:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$58,000 + (\$2.00 per machine-hour × 20,000 machine-hours) = \$58,000 + \$40,000 = \$98,000
Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$98,000 ÷ 20,000 machine-hours = \$4.90 per machine-hour
Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$4.90 per machine-hour × 80 machine-hours = \$392

[QUESTION]

144. The total job cost for Job P978 is closest to:

- A) \$3,140
- B) \$892
- C) \$3,532
- D) \$3,032

Answer: C

Reference: CH02-Ref20

Bolander Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours.....	70,000
Total fixed manufacturing overhead cost	\$294,000
Variable manufacturing overhead per machine-hour	\$2.30

Recently, Job M825 was completed with the following characteristics:

Number of units in the job	20
Total machine-hours.....	80
Direct materials.....	\$665
Direct labor cost.....	\$1,840

[QUESTION]

147. The predetermined overhead rate is closest to:

- A) \$8.80 per machine-hour
- B) \$6.50 per machine-hour
- C) \$2.30 per machine-hour
- D) \$4.20 per machine-hour

Answer: B

Difficulty: 1 Easy

Learning Objective: 02-01

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref20

Feedback:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$294,000 + (\$2.30 per machine-hour × 70,000 machine-hours) = \$294,000 + \$161,000 = \$455,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$455,000 ÷ 70,000 machine-hours = \$6.50 per machine-hour

[QUESTION]

148. The amount of overhead applied to Job M825 is closest to:

- A) \$184
- B) \$520
- C) \$704
- D) \$336

Answer: B

Difficulty: 1 Easy

Halbur Corporation has two manufacturing departments--Machining and Customizing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Machining	Customizing	Total
Estimated total machine-hours (MHs)	6,000	4,000	10,000
Estimated total fixed manufacturing overhead cost	\$33,600	\$10,000	\$43,600
Estimated variable manufacturing overhead cost per MH ...	\$1.80	\$2.80	

During the most recent month, the company started and completed two jobs--Job C and Job J. There were no beginning inventories. Data concerning those two jobs follow:

	Job C	Job J
Direct materials.....	\$11,300	\$8,100
Direct labor cost.....	\$18,500	\$6,300
Machining machine-hours	4,100	1,900
Customizing machine-hours.....	1,600	2,400

[QUESTION]

160. Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. The amount of manufacturing overhead applied to Job J is closest to:

- A) \$28,208
- B) \$18,748
- C) \$12,464
- D) \$15,744

Answer: A

Difficulty: 2 Medium

Learning Objective: 02-01

Learning Objective: 02-02

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref23

Feedback:

The first step is to calculate the estimated total overhead costs in the two departments.

Machining

Estimated fixed manufacturing overhead	\$33,600
Estimated variable manufacturing overhead (\$1.80 per MH × 6,000 MHs)	10,800
Estimated total manufacturing overhead cost	<u>\$44,400</u>

Customizing

Estimated fixed manufacturing overhead	\$10,000
Estimated variable manufacturing overhead (\$2.80 per MH × 4,000 MHs)	11,200
Estimated total manufacturing overhead cost	<u>\$21,200</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$44,400 + \$21,200 = \$65,600) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$65,600	
Estimated total machine hours	10,000	MHs
Predetermined overhead rate.....	\$6.56	per MH

The overhead applied to Job J is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job

= \$6.56 per MH x (1,900 MHs + 2,400 MHs)

= \$6.56 per MH x (4,300 MHs)

= \$28,208

[QUESTION]

161. Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. The total manufacturing cost assigned to Job C is closest to:

- A) \$18,500
- B) \$67,192
- C) \$11,300
- D) \$37,392

Answer: B

Difficulty: 2 Medium

Learning Objective: 02-01

Learning Objective: 02-02

Learning Objective: 02-03

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking
AICPA: BB Critical Thinking
AICPA: FN Measurement
Refer To: CH02-Ref23

Fee The first step is to calculate the estimated total overhead costs in the two departments.

Machining

Estimated fixed manufacturing overhead	\$33,600
Estimated variable manufacturing overhead (\$1.80 per MH × 6,000 MHs)	10,800
Estimated total manufacturing overhead cost	<u>\$44,400</u>

Customizing

Estimated fixed manufacturing overhead	\$10,000
Estimated variable manufacturing overhead (\$2.80 per MH × 4,000 MHs)	11,200
Estimated total manufacturing overhead cost	<u>\$21,200</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$44,400 + \$21,200 = \$65,600) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$65,600	
Estimated total machine hours	10,000	MHs
Predetermined overhead rate.....	\$6.56	per MH

The overhead applied to Job C is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job
= \$6.56 per MH x (4,100 MHs + 1,600 MHs)
= \$6.56 per MH x (5,700 MHs)
= \$37,392

Job C's manufacturing cost:

Direct materials.....	\$11,300
Direct labor cost.....	18,500
Manufacturing overhead applied	37,392
Total manufacturing cost	<u>\$67,192</u>

Reference: CH02-Ref24

Prather Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on the following data:

Total direct labor-hours	50,000
Total fixed manufacturing overhead cost	\$285,000
Variable manufacturing overhead per direct labor-hour.....	\$3.80

Recently, Job P513 was completed with the following characteristics:

Number of units in the job	10
Total direct labor-hours	20
Direct materials.....	\$710
Direct labor cost.....	\$500

[QUESTION]

162. The estimated total manufacturing overhead is closest to:

A) \$475,000

B) \$285,000

C) \$190,000

D) \$285,004

Answer: A

Difficulty: 1 Easy

Learning Objective: 02-01

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref24

Feedback:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$285,000 + (\$3.80 per direct labor-hour × 50,000 direct labor-hours) = \$285,000 + \$190,000 = \$475,000

[QUESTION]

163. The predetermined overhead rate is closest to:

A) \$13.30 per direct labor-hour

B) \$3.80 per direct labor-hour

C) \$9.50 per direct labor-hour

D) \$5.70 per direct labor-hour

Answer: C

Difficulty: 1 Easy

Learning Objective: 02-01

Topic Area:

Deloria Corporation has two production departments, Forming and Assembly. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Forming Department's predetermined overhead rate is based on machine-hours and the Assembly Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Forming	Assembly
Machine-hours	19,000	15,000
Direct labor-hours	4,000	8,000
Total fixed manufacturing overhead cost	\$129,200	\$77,600
Variable manufacturing overhead per machine-hour	\$1.60	
Variable manufacturing overhead per direct labor-hour		\$3.00

During the current month the company started and finished Job T288. The following data were recorded for this job:

Job T288:	Forming	Assembly
Machine-hours	80	10
Direct labor-hours	30	40
Direct materials	\$730	\$380
Direct labor cost	\$900	\$1,200

[QUESTION]

168. The estimated total manufacturing overhead for the Assembly Department is closest to:

- A) \$77,600
- B) \$101,600
- C) \$56,674
- D) \$24,000

Answer: B

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref28

Feedback:

Forming Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)

= \$96,900 + (\$2.00 per machine-hour × 17,000 machine-hours)

= \$96,900 + \$34,000 = \$130,900

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$130,900 ÷ 17,000 machine-hours = \$7.70 per machine-hour

[QUESTION]

177. The predetermined overhead rate for the Finishing Department is closest to:

- A) \$9.40 per direct labor-hour
- B) \$13.00 per direct labor-hour
- C) \$3.60 per direct labor-hour
- D) \$5.35 per direct labor-hour

Answer: B

Difficulty: 1 Easy

Learning Objective: 02-01

Learning Objective: 02-04

Kalp Corporation has two production departments, Machining and Finishing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Machining Department's predetermined overhead rate is based on machine-hours and the Finishing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Machining	Finishing
Machine-hours	19,000	12,000
Direct labor-hours	2,000	8,000
Total fixed manufacturing overhead cost	\$136,800	\$69,600
Variable manufacturing overhead per machine-hour	\$1.80	
Variable manufacturing overhead per direct labor-hour		\$3.20

During the current month the company started and finished Job K928. The following data were recorded for this job:

Job K928:	Machining	Finishing
Machine-hours	90	10
Direct labor-hours	30	50
Direct materials	\$775	\$415
Direct labor cost	\$630	\$1,050

[QUESTION]

179. The estimated total manufacturing overhead for the Machining Department is closest to:

- A) \$136,800
- B) \$34,200
- C) \$171,000
- D) \$359,100

Answer: C

Janicki Corporation has two manufacturing departments--Machining and Customizing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Machining	Customizing	Total
Estimated total machine-hours (MHs)	1,000	9,000	10,000
Estimated total fixed manufacturing overhead cost	\$4,800	\$23,400	\$28,200
Estimated variable manufacturing overhead cost per MH ...	\$1.10	\$2.50	

During the most recent month, the company started and completed two jobs--Job A and Job J. There were no beginning inventories. Data concerning those two jobs follow:

	Job A	Job J
Direct materials.....	\$12,000	\$7,700
Direct labor cost.....	\$20,700	\$6,400
Machining machine-hours	700	300
Customizing machine-hours.....	3,600	5,400

[QUESTION]

185. Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours and uses a markup of 50% on manufacturing cost to establish selling prices. The calculated selling price for Job A is closest to:

- A) \$90,707
- B) \$27,487
- C) \$82,461
- D) \$54,974

Answer: C

Difficulty: 2 Medium

Learning Objective: 02-01

Learning Objective: 02-02

Learning Objective: 02-03

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref30

Feedback:

The first step is to calculate the estimated total overhead costs in the two departments.

Machining

Estimated fixed manufacturing overhead	\$4,800
Estimated variable manufacturing overhead (\$1.10 per MH × 1,000 MHs)	1,100
Estimated total manufacturing overhead cost	<u>\$5,900</u>

Customizing

Estimated fixed manufacturing overhead	\$23,400
Estimated variable manufacturing overhead (\$2.50 per MH × 9,000 MHs)	22,500
Estimated total manufacturing overhead cost	<u>\$45,900</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$5,900 + \$45,900 = \$51,800) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$51,800	
Estimated total machine hours	10,000	MHs
Predetermined overhead rate.....	\$5.18	per MH

The overhead applied to Job A is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job
= \$5.18 per MH x (700 MHs + 3,600 MHs)

= \$5.18 per MH x (4,300 MHs)
= \$22,274

Job A's manufacturing cost:

Direct materials.....	\$12,000
Direct labor cost.....	20,700
Manufacturing overhead applied	<u>22,274</u>
Total manufacturing cost	<u>\$54,974</u>

The selling price for Job A:

Total manufacturing cost	\$54,974
Markup (50%)	<u>27,487</u>
Selling price	<u>\$82,461</u>

[QUESTION]

186. Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours and uses a markup of 50% on manufacturing cost to establish selling prices. The calculated selling price for Job J is closest to:

- A) \$71,983
- B) \$65,439
- C) \$43,626
- D) \$21,813

Answer: B

Difficulty: 2 Medium

Learning Objective: 02-01

Learning Objective: 02-02

Learning Objective: 02-03

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

Learning Objective: 02-01

Learning Objective: 02-02

Learning Objective: 02-04

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref31

Feedback:

Milling Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)

= \$113,400 + (\$1.60 per machine-hour × 18,000 machine-hours)

= \$113,400 + \$28,800 = \$142,200

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$142,200 ÷ 18,000 machine-hours = \$7.90 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$7.90 per machine-hour × 60 machine-hours = \$474

[QUESTION]

190. The amount of overhead applied in the Customizing Department to Job A319 is closest to:

- A) \$234.00
- B) \$786.00
- C) \$552.00

D) \$91,700.00

Answer: B

Difficulty: 1 Easy

Learning Objective: 02-01

Learning Objective: 02-02

Learning Objective: 02-04

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Customizing Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)

= \$64,400 + (\$3.90 per direct labor-hour × 7,000 direct labor-hours)

= \$64,400 + \$27,300 = \$91,700

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$91,700 ÷ 7,000 direct labor-hours = \$13.10 per direct labor-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$13.10 per direct labor-hour × 60 direct labor-hours = \$786

[QUESTION]

191. If the company marks up its manufacturing costs by 20% then the selling price for Job A319 would be closest to:

A) \$5,042.00

B) \$4,584.00

C) \$3,820.00

D) \$764.00

Answer: B

Sanderlin Corporation has two manufacturing departments--Machining and Finishing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Machining	Finishing	Total
Estimated total machine-hours (MHs)	5,000	5,000	10,000
Estimated total fixed manufacturing overhead cost	\$26,500	\$13,500	\$40,000
Estimated variable manufacturing overhead cost per MH ...	\$2.00	\$3.00	

During the most recent month, the company started and completed two jobs--Job C and Job L. There were no beginning inventories. Data concerning those two jobs follow:

	Job C	Job L
Direct materials.....	\$12,500	\$8,200
Direct labor cost.....	\$20,200	\$6,400
Machining machine-hours	3,400	1,600
Finishing machine-hours	2,000	3,000

[QUESTION]

192. Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both production departments. The manufacturing overhead applied to Job L is closest to:

- A) \$11,680
- B) \$28,780
- C) \$17,100
- D) \$29,900

Heroux Corporation has two manufacturing departments--Forming and Customizing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Forming	Customizing	Total
Estimated total machine-hours (MHs)	3,000	7,000	10,000
Estimated total fixed manufacturing overhead cost	\$16,500	\$20,300	\$36,800
Estimated variable manufacturing overhead cost per MH ...	\$1.70	\$2.50	

During the most recent month, the company started and completed two jobs--Job A and Job H. There were no beginning inventories. Data concerning those two jobs follow:

	Job A	Job H
Direct materials.....	\$12,800	\$6,700
Direct labor cost.....	\$24,300	\$7,800
Forming machine-hours	2,000	1,000
Customizing machine-hours.....	2,800	4,200

[QUESTION]

197. Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. The amount of manufacturing overhead applied to Job A is closest to:

- A) \$28,512
- B) \$16,632
- C) \$11,880
- D) \$17,664

Answer: A

Difficulty: 2 Medium

Learning Objective: 02-01

Learning Objective: 02-02

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref34

Feedback:

The first step is to calculate the estimated total overhead costs in the two departments.

Forming

Estimated fixed manufacturing overhead	\$16,500
Estimated variable manufacturing overhead (\$1.70 per MH × 3,000 MHs)	5,100
Estimated total manufacturing overhead cost	<u>\$21,600</u>

Customizing

Estimated fixed manufacturing overhead	\$20,300
Estimated variable manufacturing overhead (\$2.50 per MH × 7,000 MHs)	17,500
Estimated total manufacturing overhead cost	<u>\$37,800</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$21,600 + \$37,800 = \$59,400) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$59,400	
Estimated total machine hours	10,000	MHs
Predetermined overhead rate.....	\$5.94	per MH

The overhead applied to Job A is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job
= \$5.94 per MH x (2,000 MHs + 2,800 MHs)
= \$5.94 per MH x (4,800 MHs)
= \$28,512

[QUESTION]

198. Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. The amount of manufacturing overhead applied to Job H is closest to:

A) \$19,136

B) \$5,940

C) \$30,888

D) \$24,948

Answer: C

Feedback:

Machining Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)
= \$104,000 + (\$2.10 per machine-hour × 16,000 machine-hours)
= \$104,000 + \$33,600 = \$137,600

[QUESTION]

204. The estimated total manufacturing overhead for the Customizing Department is closest to:

- A) \$40,950
- B) \$19,800
- C) \$56,400
- D) \$76,200

Answer: D

Difficulty: 1 Easy

Learning Objective: 02-01

Learning Objective: 02-04

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref36

Feedback:

Customizing Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)
= \$56,400 + (\$3.30 per direct labor-hour × 6,000 direct labor-hours)
= \$56,400 + \$19,800 = \$76,200

[QUESTION]

205. The predetermined overhead rate for the Machining Department is closest to:

- A) \$22.93 per machine-hour
- B) \$6.50 per machine-hour
- C) \$2.10 per machine-hour
- D) \$8.60 per machine-hour

Answer: D

Difficulty: 1 Easy

Learning Objective: 02-01

Learning Objective: 02-04

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref36

Feedback:

Machining Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)
= \$104,000 + (\$2.10 per machine-hour × 16,000 machine-hours)
= \$104,000 + \$33,600 = \$137,600
Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$137,600 ÷ 16,000 machine-hours = \$8.60 per machine-hour

[QUESTION]

206. The predetermined overhead rate for the Customizing Department is closest to:

- A) \$3.30 per direct labor-hour
- B) \$12.70 per direct labor-hour
- C) \$9.40 per direct labor-hour
- D) \$4.76 per direct labor-hour

Answer: B

Difficulty: 1 Easy

Learning Objective: 02-01

Learning Objective: 02-04

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref36

Feedback:

Customizing Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)

= \$56,400 + (\$3.30 per direct labor-hour × 6,000 direct labor-hours)

= \$56,400 + \$19,800 = \$76,200

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$76,200 ÷ 6,000 direct labor-hours = \$12.70 per direct labor-hour

[QUESTION]

207. The amount of overhead applied in the Machining Department to Job T272 is closest to:

A) \$137,600.00

B) \$126.00

C) \$516.00

D) \$564.00

Answer: C

Difficulty: 1 Easy

Learning Objective: 02-01

Learning Objective: 02-02

Learning Objective: 02-04

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref36

Feedback:

Machining Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)

= \$104,000 + (\$2.10 per machine-hour × 16,000 machine-hours)

= \$104,000 + \$33,600 = \$137,600

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$137,600 ÷ 16,000 machine-hours = \$8.60 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$8.60 per machine-hour × 60 machine-hours = \$516

[QUESTION]

208. The amount of overhead applied in the Customizing Department to Job T272 is closest to:

A) \$76,200.00

B) \$762.00

C) \$564.00

D) \$198.00

Answer: B

Difficulty: 1 Easy

Learning Objective: 02-01

Learning Objective: 02-02

Learning Objective: 02-04

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Customizing Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)

= \$56,400 + (\$3.30 per direct labor-hour × 6,000 direct labor-hours)

= \$56,400 + \$19,800 = \$76,200

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$76,200 ÷ 6,000 direct labor-hours = \$12.70 per direct labor-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$12.70 per direct labor-hour × 60 direct labor-hours = \$762

Reference: CH02-Ref37

Stoke Corporation has two production departments, Forming and Assembly. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Forming Department's predetermined overhead rate is based on machine-hours and the Assembly Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Forming	Assembly
Machine-hours	20,000	15,000
Direct labor-hours	2,000	7,000
Total fixed manufacturing overhead cost	\$138,000	\$58,100
Variable manufacturing overhead per machine-hour	\$2.30	
Variable manufacturing overhead per direct labor-hour		\$3.00

During the current month the company started and finished Job A460. The following data were recorded for this job:

Job A460:	Forming	Assembly
Machine-hours	80	10
Direct labor-hours	30	50

[QUESTION]

209. The amount of overhead applied in the Forming Department to Job A460 is closest to:

A) \$184,000.00

B) \$184.00

C) \$736.00

D) \$664.00

Answer: C

Difficulty: 1 Easy

Learning Objective: 02-01

Learning Objective: 02-02

Learning Objective: 02-04

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref37

Feedback:

Forming Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)

= \$138,000 + (\$2.30 per machine-hour × 20,000 machine-hours)

= \$138,000 + \$46,000 = \$184,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$184,000 ÷ 20,000 machine-hours = \$9.20 per machine-hour
 Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$9.20 per machine-hour × 80 machine-hours = \$736

[QUESTION]

210. The amount of overhead applied in the Assembly Department to Job A460 is closest to:

- A) \$415.00
- B) \$150.00
- C) \$565.00
- D) \$79,100.00

Answer: C

Difficulty: 1 Easy

Learning Objective: 02-01

Learning Objective: 02-02

Learning Objective: 02-04

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Feedback:

Assembly Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)

= \$58,100 + (\$3.00 per direct labor-hour × 7,000 direct labor-hours)

= \$58,100 + \$21,000 = \$79,100

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$79,100 ÷ 7,000 direct labor-hours = \$11.30 per direct labor-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$11.30 per direct labor-hour × 50 direct labor-hours = \$565

Reference: CH02-Ref38

Vanliere Corporation has two production departments, Machining and Finishing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Machining Department's predetermined overhead rate is based on machine-hours and the Finishing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Machining	Finishing
Machine-hours.....	19,000	11,000
Direct labor-hours.....	3,000	6,000
Total fixed manufacturing overhead cost.....	\$138,700	\$52,800
Variable manufacturing overhead per machine-hour.....	\$1.90	
Variable manufacturing overhead per direct labor-hour....		\$3.80

During the current month the company started and finished Job A803. The following data were recorded for this job:

Job A803:	Machining	Finishing
Machine-hours.....	90	20
Direct labor-hours.....	20	60

[QUESTION]

211. The predetermined overhead rate for the Finishing Department is closest to:

- A) \$8.80 per direct labor-hour
- B) \$3.98 per direct labor-hour

C) \$12.60 per direct labor-hour

D) \$3.80 per direct labor-hour

Answer: C

Difficulty: 1 Easy

Learning Objective: 02-01

Learning Objective: 02-04

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref38

Feedback:

Finishing Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)

= \$52,800 + (\$3.80 per direct labor-hour × 6,000 direct labor-hours)

= \$52,800 + \$22,800 = \$75,600

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$75,600 ÷ 6,000 direct labor-hours = \$12.60 per direct labor-hour

[QUESTION]

212. The amount of overhead applied in the Machining Department to Job A803 is closest to:

A) \$828.00

B) \$792.00

C) \$171.00

D) \$174,800.00

Answer: A

Difficulty: 1 Easy

Learning Objective: 02-02

Learning Objective: 02-04

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref38

Feedback:

Machining Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)

= \$138,700 + (\$1.90 per machine-hour × 19,000 machine-hours)

= \$138,700 + \$36,100 = \$174,800

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$174,800 ÷ 19,000 machine-hours = \$9.20 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$9.20 per machine-hour × 90 machine-hours = \$828

Reference: CH02-Ref39

Ahlheim Corporation has two production departments, Forming and Assembly. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Forming Department's predetermined overhead rate is based on machine-hours and the Assembly Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Forming	Assembly
Machine-hours.....	16,000	15,000
Direct labor-hours.....	2,000	6,000

Total fixed manufacturing overhead cost	\$102,400	\$55,200
Variable manufacturing overhead per machine-hour	\$2.30	
Variable manufacturing overhead per direct labor-hour....		\$4.50

During the current month the company started and finished Job T924. The following data were recorded for this job:

Job T924:	Forming	Assembly
Machine-hours	70	20
Direct labor-hours	30	40
Direct materials	\$870	\$385
Direct labor cost	\$630	\$840

[QUESTION]

213. The estimated total manufacturing overhead for the Forming Department is closest to:

- A) \$36,800
- B) \$102,400
- C) \$309,867
- D) \$139,200

Answer: D

Difficulty: 1 Easy

Feedback:

Forming Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)
= \$102,400 + (\$2.30 per machine-hour × 16,000 machine-hours)
= \$102,400 + \$36,800 = \$139,200

[QUESTION]

214. The estimated total manufacturing overhead for the Assembly Department is closest to:

- A) \$27,000
- B) \$55,200
- C) \$82,200
- D) \$47,700

Answer: C

Difficulty: 1 Easy

Learning Objective: 02-01

Learning Objective: 02-04

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref39

Feedback:

Assembly Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)
= \$55,200 + (\$4.50 per direct labor-hour × 6,000 direct labor-hours)
= \$55,200 + \$27,000 = \$82,200

[QUESTION]

215. The total amount of overhead applied in both departments to Job T924 is closest to:

- A) \$1,157
- B) \$548
- C) \$609
- D) \$1,705

Answer: A

Difficulty: 2 Medium

Learning Objective: 02-01

Learning Objective: 02-02

Learning Objective: 02-04

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref39

Feedback:

Forming Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)

= \$102,400 + (\$2.30 per machine-hour × 16,000 machine-hours)

= \$102,400 + \$36,800 = \$139,200

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$139,200 ÷ 16,000 machine-hours = \$8.70 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$8.70 per machine-hour × 70 machine-hours = \$609

Assembly Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)

= \$55,200 + (\$4.50 per direct labor-hour × 6,000 direct labor-hours)

= \$55,200 + \$27,000 = \$82,200

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$82,200 ÷ 6,000 direct labor-hours = \$13.70 per direct labor-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$13.70 per direct labor-hour × 40 direct labor-hours = \$548

Overhead applied to Job T924

Forming Department	\$609
Assembly Department	548
Total.....	<u>\$1,157</u>

Feedback:

Customizing Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)
= \$81,000 + (\$4.30 per direct labor-hour × 9,000 direct labor-hours)
= \$81,000 + \$38,700 = \$119,700

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$119,700 ÷ 9,000 direct labor-hours = \$13.30 per direct labor-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$13.30 per direct labor-hour × 50 direct labor-hours = \$665

Reference: CH02-Ref43

Petty Corporation has two production departments, Milling and Finishing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Milling Department's predetermined overhead rate is based on machine-hours and the Finishing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Milling	Finishing
Machine-hours.....	20,000	14,000
Direct labor-hours.....	2,000	8,000
Total fixed manufacturing overhead cost	\$148,000	\$88,000

Variable manufacturing overhead per machine-hour	\$1.90	
Variable manufacturing overhead per direct labor-hour		\$3.60

[QUESTION]

224. The estimated total manufacturing overhead for the Milling Department is closest to:

- A) \$408,000
- B) \$38,000
- C) \$148,000
- D) \$186,000

Answer: D

Difficulty: 1 Easy

Customizing Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)

= \$68,600 + (\$4.30 per direct labor-hour × 7,000 direct labor-hours)

= \$68,600 + \$30,100 = \$98,700

[QUESTION]

227. The predetermined overhead rate for the Casting Department is closest to:

- A) \$9.70 per machine-hour
- B) \$7.60 per machine-hour
- C) \$2.10 per machine-hour
- D) \$27.71 per machine-hour

Answer: A

Difficulty: 1 Easy

Learning Objective: 02-01

Learning Objective: 02-04

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref44

Feedback:

Casting Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)

= \$152,000 + (\$2.10 per machine-hour × 20,000 machine-hours)

= \$152,000 + \$42,000 = \$194,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$194,000 ÷ 20,000 machine-hours = \$9.70 per machine-hour

Reference: CH02-Ref45

Marciante Corporation has two production departments, Casting and Finishing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Casting Department's predetermined overhead rate is based on machine-hours and the Finishing

Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Casting	Finishing
Machine-hours	17,000	10,000
Direct labor-hours	2,000	5,000
Total fixed manufacturing overhead cost	\$105,400	\$52,000
Variable manufacturing overhead per machine-hour	\$1.70	
Variable manufacturing overhead per direct labor-hour		\$3.90

[QUESTION]

228. The estimated total manufacturing overhead for the Casting Department is closest to:

- A) \$387,260
- B) \$134,300
- C) \$28,900
- D) \$105,400

Answer: B

Finishing Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)

= \$52,000 + (\$3.90 per direct labor-hour × 5,000 direct labor-hours)

= \$52,000 + \$19,500 = \$71,500

Reference: CH02-Ref46

Jurica Corporation has two production departments, Forming and Customizing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Forming Department's predetermined overhead rate is based on machine-hours and the Customizing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Forming	Customizing
Machine-hours	19,000	15,000
Direct labor-hours	4,000	6,000
Total fixed manufacturing overhead cost	\$100,700	\$63,000
Variable manufacturing overhead per machine-hour	\$2.00	
Variable manufacturing overhead per direct labor-hour		\$3.90

[QUESTION]

230. The predetermined overhead rate for the Forming Department is closest to:

- A) \$23.12 per machine-hour
- B) \$2.00 per machine-hour
- C) \$5.30 per machine-hour
- D) \$7.30 per machine-hour

Answer: D

Difficulty: 1 Easy

Learning Objective: 02-01

Learning Objective: 02-04

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref46

Feedback:

Forming Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)

= \$100,700 + (\$2.00 per machine-hour × 19,000 machine-hours)

= \$100,700 + \$38,000 = \$138,700

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$138,700 ÷ 19,000 machine-hours = \$7.30 per machine-hour

[QUESTION]

231. The predetermined overhead rate for the Customizing Department is closest to:

- A) \$4.55 per direct labor-hour
- B) \$3.90 per direct labor-hour
- C) \$10.50 per direct labor-hour
- D) \$14.40 per direct labor-hour

Answer: D

Difficulty: 1 Easy

Learning Objective: 02-01

Learning Objective: 02-04

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref46

Feedback:

Customizing Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)

= \$63,000 + (\$3.90 per direct labor-hour × 6,000 direct labor-hours)

= \$63,000 + \$23,400 = \$86,400

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base incurred = \$86,400 ÷ 6,000 direct labor-hours = \$14.40 per direct labor-hour

Reference: CH02-Ref47

Claybrooks Corporation has two manufacturing departments--Casting and Assembly. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Casting	Assembly	Total
Estimated total machine-hours (MHs)	3,000	2,000	5,000
Estimated total fixed manufacturing overhead cost	\$17,700	\$5,800	\$23,500
Estimated variable manufacturing overhead cost per MH ...	\$1.50	\$2.20	

[QUESTION]

232. Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. That predetermined manufacturing overhead rate is closest to:

- A) \$4.70
- B) \$7.40
- C) \$6.48
- D) \$3.70

Answer: C

Difficulty: 2 Medium

Learning Objective: 02-01

Topic Area:

Blooms: Apply

AACSB: Analytical Thinking

AICPA: BB Critical Thinking

AICPA: FN Measurement

Refer To: CH02-Ref47

Feedback:

The first step is to calculate the estimated total overhead costs in the two departments.

Casting

Estimated fixed manufacturing overhead	\$17,700
Estimated variable manufacturing overhead (\$1.50 per MH × 3,000 MHs)	4,500
Estimated total manufacturing overhead cost	<u>\$22,200</u>

Assembly

Estimated fixed manufacturing overhead	\$5,800
Estimated variable manufacturing overhead (\$2.20 per MH × 2,000 MHs)	4,400
Estimated total manufacturing overhead cost	<u>\$10,200</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$22,200 + \$10,200 = \$32,400) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$32,400	
Estimated total machine hours	5,000	MHs
Predetermined overhead rate.....	\$6.48	per MH

[QUESTION]

233. Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both departments. The *departmental* predetermined overhead rate in the Casting Department is closest to:

- A) \$1.50
- B) \$7.40
- C) \$5.90

D) \$6.48

Answer: B

Difficulty: 2 Medium

Essay

[QUESTION]

235. Linneer Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours.....	30,000
Total fixed manufacturing overhead cost	\$144,000
Variable manufacturing overhead per machine-hour	\$4.00

Required:

Calculate the estimated total manufacturing overhead for the year.

Answer:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$144,000 + (\$4.00 per machine-hour × 30,000 machine-hours) = \$144,000 + \$120,000 = \$264,000

Difficulty: 1 Easy

Learning Objective: 02-01

[QUESTION]

236. Dallman Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on 70,000 machine-hours, total fixed manufacturing overhead cost of \$287,000, and a variable manufacturing overhead rate of \$3.50 per machine-hour.

Required:

a. Calculate the estimated total manufacturing overhead for the year.

b. Calculate the predetermined overhead rate for the year.

Answer:

a. Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$287,000 + (\$3.50 per machine-hour × 70,000 machine-hours) = \$287,000 + \$245,000 = \$532,000

b. Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$532,000 ÷ 70,000 machine-hours = \$7.60 per machine-hour

Difficulty: 1 Easy

Learning Objective: 02-01

[QUESTION]

237. Henkes Corporation bases its predetermined overhead rate on the estimated labor-hours for the upcoming year. At the beginning of the most recently completed year, the company estimated the labor-hours for the upcoming year at 66,000 labor-hours. The estimated variable manufacturing overhead was \$8.41 per labor-hour and the estimated total fixed manufacturing overhead was \$1,533,180. The actual labor-hours for the year turned out to be 68,400 labor-hours.

Required:

Compute the company's predetermined overhead rate for the recently completed year.

Answer:

Estimated total manufacturing overhead = \$1,533,180 + (\$8.41 per labor-hour × 66,000 labor-hours) = \$2,088,240

Predetermined overhead rate = \$2,088,240 ÷ 66,000 labor-hours = \$31.64 per labor-hour

Difficulty: 1 Easy

Learning Objective: 02-01

Topic Area:

[QUESTION]

244. Florek Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on the following data:

Total direct labor-hours	10,000
Total fixed manufacturing overhead cost	\$31,000
Variable manufacturing overhead per direct labor-hour..	\$2.50

Required:

a. Calculate the estimated total manufacturing overhead for the year.

b. Calculate the predetermined overhead rate for the year.

Answer:

a. Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$31,000 + (\$2.50 per direct labor-hour × 10,000 direct labor-hours) = \$31,000 + \$25,000 = \$56,000

b. Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$56,000 ÷ 10,000 direct labor-hours = \$5.60 per direct labor-hour

[QUESTION]

245. Meenach Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on 80,000 direct labor-hours, total fixed manufacturing overhead cost of \$160,000, and a variable manufacturing

overhead rate of \$2.30 per direct labor-hour. Recently Job X387 was completed and required 120 direct labor-hours.

Required:

Calculate the amount of overhead applied to Job X387.

Answer:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$160,000 + (\$2.30 per direct labor-hour × 80,000 direct labor-hours) = \$160,000 + \$184,000 = \$344,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$344,000 ÷ 80,000 direct labor-hours = \$4.30 per direct labor-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$4.30 per direct labor-hour × 120 direct labor-hours = \$516

[QUESTION]

247. Fillmore Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on 60,000 direct labor-hours, total fixed manufacturing overhead cost of \$96,000, and a variable manufacturing overhead rate of \$3.30 per direct labor-hour. Recently Job X809 was completed and required 100 direct labor-hours.

Required:

a. Calculate the estimated total manufacturing overhead for the year.

b. Calculate the predetermined overhead rate for the year.

c. Calculate the amount of overhead applied to Job X809.

Answer:

a. Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$96,000 + (\$3.30 per direct labor-hour × 60,000 direct labor-hours) = \$96,000 + \$198,000 = \$294,000

b. Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$294,000 ÷ 60,000 direct labor-hours = \$4.90 per direct labor-hour

c. Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$4.90 per direct labor-hour × 100 direct labor-hours = \$490

[QUESTION]

248. Thrall Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours.....	10,000
Total fixed manufacturing overhead cost	\$50,000
Variable manufacturing overhead per machine-hour	\$3.90

Recently Job K125 was completed and required 160 machine-hours.

Required:

Calculate the amount of overhead applied to Job K125.

Answer:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$50,000 + (\$3.90 per machine-hour × 10,000 machine-hours) = \$50,000 + \$39,000 = \$89,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$89,000 ÷ 10,000 machine-hours = \$8.90 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$8.90 per machine-hour × 160 machine-hours = \$1,424

[QUESTION]

249. Verry Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on the following data:

Total direct labor-hours	60,000
Total fixed manufacturing overhead cost	\$342,000

Variable manufacturing overhead per direct labor-hour.. \$2.40

Recently Job X711 was completed and required 90 direct labor-hours.

Required:

- Calculate the estimated total manufacturing overhead for the year.
- Calculate the predetermined overhead rate for the year.
- Calculate the amount of overhead applied to Job X711.

Answer:

a. Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$342,000 + (\$2.40 per direct labor-hour × 60,000 direct labor-hours) = \$342,000 + \$144,000 = \$486,000

b. Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$486,000 ÷ 60,000 direct labor-hours = \$8.10 per direct labor-hour

c. Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$8.10 per direct labor-hour × 90 direct labor-hours = \$729

[QUESTION]

250. Trevigne Corporation uses a predetermined overhead rate base on machine-hours that it recalculates at the beginning of each year. The company has provided the following data for the most recent year.

Estimated total fixed manufacturing overhead from the beginning of the year	\$114,000	
Estimated activity level from the beginning of the year	10,000	machine-hours
Actual total fixed manufacturing overhead	\$104,000	
Actual activity level	9,400	machine-hours

Required:

Determine the amount of manufacturing overhead that would have been applied to all jobs during the period.

Answer:

Estimated total fixed manufacturing overhead (a)...	\$114,000	
Estimated activity level (b)	10,000	machine-hours
Predetermined overhead rate (a) ÷ (b)	\$11.40	per machine-hour
Actual activity level	9,400	machine-hours
Manufacturing overhead applied	\$107,160

[QUESTION]

251. Luarca Corporation has two manufacturing departments--Casting and Customizing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Casting	Customizing	Total
Estimated total machine-hours (MHs)	2,000	3,000	5,000
Estimated total fixed manufacturing overhead cost	\$11,600	\$7,200	\$18,800
Estimated variable manufacturing overhead cost per MH ...	\$1.90	\$2.80	

During the most recent month, the company started and completed two jobs--Job F and Job L. There were no beginning inventories. Data concerning those two jobs follow:

	Job F	Job L
Direct materials.....	\$10,600	\$6,600
Direct labor cost.....	\$24,400	\$8,600
Casting machine-hours	1,400	600
Customizing machine-hours.....	1,200	1,800

Required:

Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours and uses a markup of 50% on manufacturing cost to establish selling prices. Calculate the selling prices for Job F and Job L.

Answer:

The first step is to calculate the estimated total overhead costs in the two departments.

Casting

Estimated fixed manufacturing overhead	\$11,600
Estimated variable manufacturing overhead (\$1.90 per MH × 2,000 MHs)	3,800
Estimated total manufacturing overhead cost	<u>\$15,400</u>

Customizing

Estimated fixed manufacturing overhead	\$7,200
Estimated variable manufacturing overhead (\$2.80 per MH × 3,000 MHs)	8,400
Estimated total manufacturing overhead cost	<u>\$15,600</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$15,400 + \$15,600 = \$31,000) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$31,000	
Estimated total machine hours	5,000	MHs
Predetermined overhead rate.....	\$6.20	per MH

The overhead applied to Job F is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job
= \$6.20 per MH x (1,400 MHs + 1,200 MHs)
= \$6.20 per MH x (2,600 MHs)
= \$16,120

The overhead applied to Job L is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job
= \$6.20 per MH x (600 MHs + 1,800 MHs)
= \$6.20 per MH x (2,400 MHs)
= \$14,880

Job F's manufacturing cost:

Direct materials.....	\$10,600
Direct labor cost.....	24,400

Manufacturing overhead applied	16,120
Total manufacturing cost	<u>\$51,120</u>

Job L's manufacturing cost:

Direct materials.....	\$6,600
Direct labor cost.....	8,600
Manufacturing overhead applied	14,880
Total manufacturing cost	<u>\$30,080</u>

The selling price for Job F:

Total manufacturing cost	\$51,120
Markup (50%)	25,560
Selling price	<u>\$76,680</u>

The selling price for Job L:

Total manufacturing cost	\$30,080
Markup (50%)	15,040
Selling price	<u>\$45,120</u>

[QUESTION]

252. Lamberson Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours.....	50,000
Total fixed manufacturing overhead cost	\$460,000
Variable manufacturing overhead per machine-hour	\$3.10

Recently Job P647 was completed with the following characteristics:

Number of units in the job	50
Total machine-hours.....	150
Direct materials.....	\$740
Direct labor cost.....	\$6,000

Required:

- Calculate the amount of overhead applied to Job P647.
- Calculate the total job cost for Job P647.
- Calculate the unit product cost for Job P647.

Answer:

a. Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$460,000 + (\$3.10 per machine-hour × 50,000 machine-hours) = \$460,000 + \$155,000 = \$615,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$615,000 ÷ 50,000 machine-hours = \$12.30 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate x Amount of the allocation base incurred by the job = \$12.30 per machine-hour x 150 machine-hours = \$1,845

b.	Direct materials.....	\$740
	Direct labor	6,000
	Manufacturing overhead applied	<u>1,845</u>
	Total cost of Job P647	<u>\$8,585</u>
c.	Total cost of Job P647 (a)	\$8,585
	Number of units (b)	50
	Unit product cost (a) ÷ (b)	\$171.70

[QUESTION]

253. Mcewan Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on 20,000 direct labor-hours, total fixed manufacturing overhead cost of \$182,000, and a variable manufacturing overhead rate of \$2.50 per direct labor-hour. Job X941, which was for 50 units of a custom product, was recently completed. The job cost sheet for the job contained the following data:

Total direct labor-hours	250
Direct materials.....	\$740
Direct labor cost.....	\$6,500

Required:

Calculate the selling price for Job X941 if the company marks up its unit product costs by 20%.

Answer:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base x Estimated total amount of the allocation base) = \$182,000 + (\$2.50 per direct labor-hour x 20,000 direct labor-hours) = \$182,000 + \$50,000 = \$232,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$232,000 ÷ 20,000 direct labor-hours = \$11.60 per direct labor-hour

Overhead applied to a particular job = Predetermined overhead rate x Amount of the allocation base incurred by the job = \$11.60 per direct labor-hour x 250 direct labor-hours = \$2,900

Direct materials.....	\$740
Direct labor	6,500
Manufacturing overhead applied	<u>2,900</u>
Total cost of Job X941	<u>\$10,140</u>
Total cost of Job X941 (a)	\$10,140
Number of units (b)	50
Unit product cost (a) ÷ (b)	\$202.80

Unit product cost for Job X941	\$202.80
Markup (20% × \$202.80)	40.56
Selling price	<u>\$243.36</u>

[QUESTION]

254. Teasley Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on 70,000 machine-hours, total fixed manufacturing overhead cost of \$630,000, and a variable manufacturing overhead rate of \$3.40 per machine-hour. Job X159 was recently completed. The job cost sheet for the job contained the following data:

Total machine-hours	200
Direct materials	\$670
Direct labor cost	\$7,800

Required:

Calculate the total job cost for Job X159.

Answer:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$630,000 + (\$3.40 per machine-hour × 70,000 machine-hours) = \$630,000 + \$238,000 = \$868,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$868,000 ÷ 70,000 machine-hours = \$12.40 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$12.40 per machine-hour × 200 machine-hours = \$2,480

Direct materials	\$670
Direct labor	7,800
Manufacturing overhead applied	2,480

[QUESTION]

255. Alsobrooks Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours.....	40,000
Total fixed manufacturing overhead cost	\$156,000
Variable manufacturing overhead per machine-hour	\$2.20

Recently Job M242 was completed with the following characteristics:

Number of units in the job	20
Total machine-hours.....	60
Direct materials.....	\$725
Direct labor cost.....	\$1,680

Required:

- Calculate the total job cost for Job M242.
- Calculate the unit product cost for Job M242.

Answer:

a. Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$156,000 + (\$2.20 per machine-hour × 40,000 machine-hours) = \$156,000 + \$88,000 = \$244,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$244,000 ÷ 40,000 machine-hours = \$6.10 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$6.10 per machine-hour × 60 machine-hours = \$366

Direct materials.....	\$725
Direct labor	1,680
Manufacturing overhead applied	366
Total cost of Job M242	<u>\$2,771</u>

256. Ryans Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours.....	10,000
Total fixed manufacturing overhead cost	\$71,000
Variable manufacturing overhead per machine-hour...	\$2.50

Recently Job P512 was completed with the following characteristics:

Number of units in the job	30
Total machine-hours.....	60

Direct materials.....	\$870
Direct labor cost.....	\$2,400

Required:

- Calculate the predetermined overhead rate for the year.
- Calculate the amount of overhead applied to Job P512.
- Calculate the total job cost for Job P512.
- Calculate the unit product cost for Job P512.

Answer:

a. Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$71,000 + (\$2.50 per machine-hour × 10,000 machine-hours) = \$71,000 + \$25,000 = \$96,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$96,000 ÷ 10,000 machine-hours = \$9.60 per machine-hour

b. Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$9.60 per machine-hour × 60 machine-hours = \$576

c. Direct materials.....	\$870
Direct labor	2,400
Manufacturing overhead applied	576

[QUESTION]

257. Lezo Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on 40,000 machine-hours, total fixed manufacturing overhead cost of \$136,000, and a variable manufacturing overhead rate of \$2.90 per machine-hour. Job A290, which was for 60 units of a custom product, was recently completed. The job cost sheet for the job contained the following data:

Total machine-hours.....	300
Direct materials.....	\$585
Direct labor cost.....	\$7,200

Required:

- Calculate the estimated total manufacturing overhead for the year.
- Calculate the predetermined overhead rate for the year.
- Calculate the amount of overhead applied to Job A290.
- Calculate the total job cost for Job A290.

Answer:

a. Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$136,000 + (\$2.90 per machine-hour × 40,000 machine-hours) = \$136,000 + \$116,000 = \$252,000

b. Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$252,000 ÷ 40,000 machine-hours = \$6.30 per machine-hour

c. Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$6.30 per machine-hour × 300 machine-hours = \$1,890

[QUESTION]

258. Whitlatch Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours.....	60,000
Total fixed manufacturing overhead cost	\$342,000
Variable manufacturing overhead per machine-hour	\$2.70

Recently Job M238 was completed with the following characteristics:

Number of units in the job	70
Total machine-hours.....	140
Direct materials.....	\$945
Direct labor cost.....	\$2,800

Required:

Calculate the total job cost for Job M238.

Answer:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$342,000 + (\$2.70 per machine-hour × 60,000 machine-hours) = \$342,000 + \$162,000 = \$504,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$504,000 ÷ 60,000 machine-hours = \$8.40 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$8.40 per machine-hour × 140 machine-hours = \$1,176

Direct materials.....	\$945

[QUESTION]

259. Obermeyer Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on 10,000 direct labor-hours, total fixed manufacturing overhead cost of \$96,000, and a variable manufacturing overhead rate of \$3.60 per direct labor-hour. Job A735, which was for 40 units of a custom product, was recently completed. The job cost sheet for the job contained the following data:

Total direct labor-hours	200
Direct materials.....	\$540
Direct labor cost.....	\$6,400

Required:

- Calculate the amount of overhead applied to Job A735.
- Calculate the total job cost for Job A735.
- Calculate the unit product cost for Job A735.

Answer:

a. Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$96,000 + (\$3.60 per direct labor-hour × 10,000 direct labor-hours) = \$96,000 + \$36,000 = \$132,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$132,000 ÷ 10,000 direct labor-hours = \$13.20 per direct labor-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$13.20 per direct labor-hour × 200 direct labor-hours = \$2,640

b. Direct materials.....	\$540
Direct labor	6,400
Manufacturing overhead applied	<u>2,640</u>
Total cost of Job A735.....	<u>\$9,580</u>

[QUESTION]

260. Olmscheid Corporation has two manufacturing departments--Molding and Customizing. The company used the following data at the beginning of the period to calculate predetermined overhead rates:

	Molding	Customizing	Total
Estimated total machine-hours (MHs)	5,000	5,000	10,000
Estimated total fixed manufacturing overhead cost	\$21,000	\$14,000	\$35,000
Estimated variable manufacturing overhead cost per MH ...	\$1.50	\$2.40	

During the period, the company started and completed two jobs--Job F and Job K. There were no beginning inventories. Data concerning those two jobs follow:

	Job F	Job K
Direct materials.....	\$12,700	\$6,400
Direct labor cost.....	\$19,100	\$7,900
Molding machine-hours	3,400	1,600
Customizing machine-hours.....	2,000	3,000

Required:

- Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. Calculate that overhead rate.
- Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. Calculate the amount of manufacturing overhead applied to Job F.
- Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. Calculate the amount of manufacturing overhead applied to Job K.
- Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. Calculate the total manufacturing cost assigned to Job F.
- Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. Calculate the total manufacturing cost assigned to Job K.
- Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours and uses a markup of 30% on manufacturing cost to establish selling prices. Calculate the selling price for Job F.
- Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours and uses a markup of 30% on manufacturing cost to establish selling prices. Calculate the selling price for Job K.
- Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. If both jobs were sold during the month, what was the company's cost of goods sold for the month?

Answer:

- The first step is to calculate the estimated total overhead costs in the two departments.

Molding

Estimated fixed manufacturing overhead	\$21,000
Estimated variable manufacturing overhead (\$1.50 per MH × 5,000 MHs)	7,500
Estimated total manufacturing overhead cost	<u>\$28,500</u>

Customizing

Estimated fixed manufacturing overhead	\$14,000
Estimated variable manufacturing overhead (\$2.40 per MH × 5,000 MHs)	12,000
Estimated total manufacturing overhead cost	<u>\$26,000</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$28,500 + \$26,000 = \$54,500) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$54,500	
Estimated total machine hours	10,000	MHs
Predetermined overhead rate.....	\$5.45	per MH

b. The overhead applied to Job F is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job
= \$5.45 per MH x (3,400 MHs + 2,000 MHs)
= \$5.45 per MH x (5,400 MHs)
= \$29,430

c. The overhead applied to Job K is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job
= \$5.45 per MH x (1,600 MHs + 3,000 MHs)
= \$5.45 per MH x (4,600 MHs)
= \$25,070

d. Job F's manufacturing cost:

Direct materials.....	\$12,700
Direct labor cost.....	19,100
Manufacturing overhead applied	29,430
Total manufacturing cost	<u>\$61,230</u>

e. Job K's manufacturing cost:

Direct materials.....	\$6,400
Direct labor cost.....	7,900
Manufacturing overhead applied	25,070
Total manufacturing cost	<u>\$39,370</u>

f. The selling price for Job F:

Total manufacturing cost	\$61,230
Markup (30%)	18,369
Selling price	<u>\$79,599</u>

g. The selling price for Job K:

Total manufacturing cost	\$39,370
Markup (30%)	11,811
Selling price	<u>\$51,181</u>

h.

Total manufacturing cost assigned to Job F	\$61,230
Total manufacturing cost assigned to Job K	39,370
Cost of goods sold.....	<u>\$100,600</u>

[QUESTION]

261. Cardoso Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on 70,000 machine-hours, total fixed manufacturing overhead cost of \$308,000, and a variable manufacturing overhead rate of \$2.10 per machine-hour. Job M556, which was for 50 units of a custom product, was recently completed. The job cost sheet for the job contained the following data:

Total machine-hours.....	100
Direct materials.....	\$555
Direct labor cost.....	\$2,700

Required:

- Calculate the total job cost for Job M556.
- Calculate the unit product cost for Job M556.

Answer:

a. Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$308,000 + (\$2.10 per machine-hour × 70,000 machine-hours) = \$308,000 + \$147,000 = \$455,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$455,000 ÷ 70,000 machine-hours = \$6.50 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$6.50 per machine-hour × 100 machine-hours = \$650

Direct materials.....	\$555
Direct labor	2,700
Manufacturing overhead applied	650
Total cost of Job M556	<u>\$3,905</u>

- | | |
|----------------------------------|---------|
| Total cost of Job M556 (a)..... | \$3,905 |
| Number of units (b) | 50 |
| Unit product cost (a) ÷ (b)..... | \$78.10 |

[QUESTION]

262. Dietzen Corporation has two manufacturing departments--Casting and Finishing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Casting	Finishing	Total
Estimated total machine-hours (MHs)	4,000	6,000	10,000
Estimated total fixed manufacturing overhead cost	\$18,000	\$18,000	\$36,000
Estimated variable manufacturing overhead cost per MH ...	\$1.50	\$2.30	

During the most recent month, the company started and completed two jobs--Job D and Job J. There were no beginning inventories. Data concerning those two jobs follow:

	Job D	Job J
Direct materials.....	\$14,300	\$6,800
Direct labor cost.....	\$21,700	\$8,800
Casting machine-hours	2,700	1,300
Finishing machine-hours	2,400	3,600

Required:

- a. Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. Calculate the total manufacturing cost assigned to Job D.
- b. Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. Calculate the total manufacturing cost assigned to Job J.

Answer:

- a. The first step is to calculate the estimated total overhead costs in the two departments.

Casting

Estimated fixed manufacturing overhead	\$18,000
Estimated variable manufacturing overhead (\$1.50 per MH × 4,000 MHs)	6,000
Estimated total manufacturing overhead cost	<u>\$24,000</u>

Finishing

Estimated fixed manufacturing overhead	\$18,000
Estimated variable manufacturing overhead (\$2.30 per MH × 6,000 MHs)	13,800
Estimated total manufacturing overhead cost	<u>\$31,800</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$24,000 + \$31,800 = \$55,800) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$55,800	
Estimated total machine hours	10,000	MHs
Predetermined overhead rate	\$5.58	per MH

The overhead applied to Job D is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job
 = \$5.58 per MH x (2,700 MHs + 2,400 MHs)
 = \$5.58 per MH x (5,100 MHs)
 = \$28,458

Job D's manufacturing cost:

Direct materials	\$14,300
Direct labor cost	21,700
Manufacturing overhead applied	28,458
Total manufacturing cost	<u>\$64,458</u>

b. The overhead applied to Job J is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job
 = \$5.58 per MH x (1,300 MHs + 3,600 MHs)
 = \$5.58 per MH x (4,900 MHs)
 = \$27,342

Job J's manufacturing cost:

Direct materials	\$6,800
Direct labor cost	8,800
Manufacturing overhead applied	27,342
Total manufacturing cost	<u>\$42,942</u>

[QUESTION]

263. Posson Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on 20,000 machine-hours, total fixed manufacturing overhead cost of \$130,000, and a variable manufacturing overhead rate of \$3.00 per machine-hour. Job K789, which was for 10 units of a custom product, was recently completed. The job cost sheet for the job contained the following data:

Total machine-hours.....	30
Direct materials.....	\$775
Direct labor cost.....	\$1,170

Required:

- Calculate the predetermined overhead rate for the year.
- Calculate the amount of overhead applied to Job K789.
- Calculate the total job cost for Job K789.
- Calculate the unit product cost for Job K789.

Answer:

a. Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$130,000 + (\$3.00 per machine-hour × 20,000 machine-hours) = \$130,000 + \$60,000 = \$190,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$190,000 ÷ 20,000 machine-hours = \$9.50 per machine-hour

b. Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$9.50 per machine-hour × 30 machine-hours = \$285

c. Direct materials.....	\$775
Direct labor	1,170
Manufacturing overhead applied	285
Total cost of Job K789.....	<u>\$2,230</u>

d. Total cost of Job K789 (a)	\$2,230
Number of units (b).....	10
Unit product cost (a) ÷ (b).....	\$223.00

[QUESTION]

264. Rondo Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours.....	30,000
Total fixed manufacturing overhead cost	\$252,000
Variable manufacturing overhead per machine-hour	\$2.90

Recently Job T506 was completed with the following characteristics:

Number of units in the job	70
Total machine-hours.....	210
Direct materials.....	\$665
Direct labor cost.....	\$6,720

Required:

- Calculate the estimated total manufacturing overhead for the year.
- Calculate the predetermined overhead rate for the year.
- Calculate the amount of overhead applied to Job T506.
- Calculate the total job cost for Job T506.
- Calculate the unit product cost for Job T506.
- Calculate the selling price for Job T506 if the company marks up its unit product costs by 20%.

Answer:

a. Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$252,000 + (\$2.90 per machine-hour × 30,000 machine-hours) = \$252,000 + \$87,000 = \$339,000

b. Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$339,000 ÷ 30,000 machine-hours = \$11.30 per machine-hour

c. Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$11.30 per machine-hour × 210 machine-hours = \$2,373

d. Direct materials.....	\$665
Direct labor	6,720
Manufacturing overhead applied	<u>2,373</u>
Total cost of Job T506	<u>\$9,758</u>

e. Total cost of Job T506 (a)	\$9,758
Number of units (b).....	70
Unit product cost (a) ÷ (b).....	\$139.40

f. Unit product cost for Job T506	\$139.40
Markup (20% × \$139.40).....	<u>27.88</u>
Selling price	<u>\$167.28</u>

[QUESTION]

265. Leadley Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on the following data:

Total direct labor-hours	10,000
Total fixed manufacturing overhead cost	\$76,000
Variable manufacturing overhead per direct labor-hour..	\$2.10

Recently Job X701 was completed with the following characteristics:

Number of units in the job	90
Total direct labor-hours	270
Direct materials.....	\$590
Direct labor cost.....	\$6,480

Required:

- Calculate the estimated total manufacturing overhead for the year.
- Calculate the predetermined overhead rate for the year.
- Calculate the amount of overhead applied to Job X701.
- Calculate the total job cost for Job X701.

Answer:

a. Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$76,000 + (\$2.10 per direct labor-hour × 10,000 direct labor-hours) = \$76,000 + \$21,000 = \$97,000

b. Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$97,000 ÷ 10,000 direct labor-hours = \$9.70 per direct labor-hour

c. Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$9.70 per direct labor-hour × 270 direct labor-hours = \$2,619

d. Direct materials.....	\$590
Direct labor	6,480
Manufacturing overhead applied	2,619
Total cost of Job X701	<u>\$9,689</u>

[QUESTION]

266. Pasko Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on the following data:

Total direct labor-hours	30,000
Total fixed manufacturing overhead cost	\$258,000
Variable manufacturing overhead per direct labor-hour...	\$2.00

Recently Job P660 was completed with the following characteristics:

Number of units in the job	50
Total direct labor-hours	250
Direct materials.....	\$645
Direct labor cost.....	\$10,00
Direct labor cost.....	0

Required:

Calculate the selling price for Job P660 if the company marks up its unit product costs by 20%.

Answer:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$258,000 + (\$2.00 per direct labor-hour × 30,000 direct labor-hours) = \$258,000 + \$60,000 = \$318,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$318,000 ÷ 30,000 direct labor-hours = \$10.60 per direct labor-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$10.60 per direct labor-hour × 250 direct labor-hours = \$2,650

Direct materials.....	\$645
Direct labor	10,000
Manufacturing overhead applied	2,650
Total cost of Job P660.....	<u>\$13,295</u>

Total cost of Job P660 (a)	\$13,295
Number of units (b).....	50
Unit product cost (a) ÷ (b).....	\$265.90

[QUESTION]

267. Leeds Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours.....	50,000
Total fixed manufacturing overhead cost	\$215,000
Variable manufacturing overhead per machine-hour	\$3.80

Recently Job T496 was completed with the following characteristics:

Number of units in the job	80
Total machine-hours.....	240
Direct materials.....	\$735
Direct labor cost.....	\$8,880

Required:

- Calculate the estimated total manufacturing overhead for the year.
- Calculate the predetermined overhead rate for the year.
- Calculate the amount of overhead applied to Job T496.
- Calculate the total job cost for Job T496.
- Calculate the unit product cost for Job T496.

Answer:

a. Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$215,000 + (\$3.80 per machine-hour × 50,000 machine-hours) = \$215,000 + \$190,000 = \$405,000

b. Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$405,000 ÷ 50,000 machine-hours = \$8.10 per machine-hour

c. Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$8.10 per machine-hour × 240 machine-hours = \$1,944

d.	Direct materials.....	\$735
	Direct labor	8,880
	Manufacturing overhead applied	1,944
	Total cost of Job T496	<u>\$11,559</u>

e.	Total cost of Job T496 (a)	\$11,559

[QUESTION]

268. Petru Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on the following data:

Total machine-hours.....	70,000
Total fixed manufacturing overhead cost	\$525,000
Variable manufacturing overhead per machine-hour	\$2.30

Recently Job P987 was completed with the following characteristics:

Number of units in the job	20
Total machine-hours.....	80
Direct materials.....	\$630
Direct labor cost.....	\$2,080

Required:

Calculate the unit product cost for Job P987.

Answer:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$525,000 + (\$2.30 per machine-hour × 70,000 machine-hours) = \$525,000 + \$161,000 = \$686,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$686,000 ÷ 70,000 machine-hours = \$9.80 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate x Amount of the allocation base incurred by the job = \$9.80 per machine-hour x 80 machine-hours = \$784

Direct materials.....	\$630
Direct labor	2,080
Manufacturing overhead applied	784
Total cost of Job P987	<u>\$3,494</u>

[QUESTION]

269. Franta Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on direct labor-hours. The company based its predetermined overhead rate for the current year on 70,000 direct labor-hours, total fixed manufacturing overhead cost of \$238,000, and a variable manufacturing overhead rate of \$2.70 per direct labor-hour. Job P873, which was for 50 units of a custom product, was recently completed. The job cost sheet for the job contained the following data:

Total direct labor-hours	200
Direct materials.....	\$630
Direct labor cost.....	\$4,800

Required:

Calculate the unit product cost for Job P873.

Answer:

Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base x Estimated total amount of the allocation base) = \$238,000 + (\$2.70 per direct labor-hour x 70,000 direct labor-hours) = \$238,000 + \$189,000 = \$427,000

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$427,000 ÷ 70,000 direct labor-hours = \$6.10 per direct labor-hour

Overhead applied to a particular job = Predetermined overhead rate x Amount of the allocation base incurred by the job = \$6.10 per direct labor-hour x 200 direct labor-hours = \$1,220

[QUESTION]

270. Temby Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on 10,000 machine-hours, total fixed manufacturing overhead cost of \$88,000, and a variable manufacturing overhead rate of \$3.20 per machine-hour. Job K418, which was for 50 units of a custom product, was recently completed. The job cost sheet for the job contained the following data:

Total machine-hours.....	150
Direct materials.....	\$580
Direct labor cost.....	\$3,900

Required:

- Calculate the estimated total manufacturing overhead for the year.
- Calculate the predetermined overhead rate for the year.
- Calculate the amount of overhead applied to Job K418.
- Calculate the total job cost for Job K418.
- Calculate the unit product cost for Job K418.
- Calculate the selling price for Job K418 if the company marks up its unit product costs by 30%.

Answer:

a. Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$88,000 + (\$3.20 per machine-hour × 10,000 machine-hours) = \$88,000 + \$32,000 = \$120,000

b. Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$120,000 ÷ 10,000 machine-hours = \$12.00 per machine-hour

c. Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$12.00 per machine-hour × 150 machine-hours = \$1,800

d. Direct materials.....	\$580
Direct labor	3,900

[QUESTION]

271. Saxon Corporation uses a job-order costing system with a single plantwide predetermined overhead rate based on machine-hours. The company based its predetermined overhead rate for the current year on 10,000 machine-hours, total fixed manufacturing overhead cost of \$91,000, and a variable manufacturing overhead rate of \$2.40 per machine-hour. Job K373, which was for 60 units of a custom product, was recently completed. The job cost sheet for the job contained the following data:

Total machine-hours.....	120
Direct materials.....	\$645
Direct labor cost.....	\$3,720

Required:

- Calculate the estimated total manufacturing overhead for the year.
- Calculate the predetermined overhead rate for the year.
- Calculate the amount of overhead applied to Job K373.
- Calculate the total job cost for Job K373.
- Calculate the unit product cost for Job K373.

Answer:

a. Estimated total manufacturing overhead cost = Estimated total fixed manufacturing overhead cost + (Estimated variable overhead cost per unit of the allocation base × Estimated total amount of the allocation base) = \$91,000 + (\$2.40 per machine-hour × 10,000 machine-hours) = \$91,000 + \$24,000 = \$115,000

b. Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the allocation base = \$115,000 ÷ 10,000 machine-hours = \$11.50 per machine-hour

c. Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$11.50 per machine-hour × 120 machine-hours = \$1,380

d.	Direct materials.....	\$645
	Direct labor	3,720

[QUESTION]

272. Kluth Corporation has two manufacturing departments--Molding and Customizing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Molding	Customizing	Total
Estimated total machine-hours (MHs)	3,000	2,000	5,000
Estimated total fixed manufacturing overhead cost	\$15,900	\$4,200	\$20,100

Estimated variable manufacturing overhead cost per MH ...	\$1.20	\$2.40
---	--------	--------

During the most recent month, the company started and completed two jobs--Job C and Job M. There were no beginning inventories. Data concerning those two jobs follow:

	Job C	Job M
Direct materials.....	\$15,600	\$8,600
Direct labor cost.....	\$25,100	\$8,300
Molding machine-hours	2,000	1,000
Customizing machine-hours.....	800	1,200

Required:

Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both production departments. Further assume that the company uses a markup of 20% on manufacturing cost to establish selling prices. Calculate the selling prices for Job C and for Job M.

Answer:

Molding Department predetermined overhead rate:

Estimated fixed manufacturing overhead.....	\$15,900	
Estimated variable manufacturing overhead (\$1.20 per MH × 3,000 MHs).....	3,600	
Estimated total manufacturing overhead cost (a).....	\$19,500	
Estimated total machine-hours (b)	3,000	MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$6.50	per MH

Customizing Department predetermined overhead rate:

Estimated fixed manufacturing overhead.....	\$4,200	
Estimated variable manufacturing overhead (\$2.40 per MH × 2,000 MHs).....	4,800	
Estimated total manufacturing overhead cost (a).....	\$9,000	
Estimated total machine-hours (b)	2,000	MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$4.50	per MH

Manufacturing overhead applied to Job C:

Molding (\$6.50 per MH × 2,000 MHs).....	\$13,000
Customizing (\$4.50 per MH × 800 MHs).....	3,600
Total manufacturing overhead applied.....	<u>\$16,600</u>

Manufacturing overhead applied to Job M:

Molding (\$6.50 per MH × 1,000 MHs).....	\$6,500
Customizing (\$4.50 per MH × 1,200 MHs).....	5,400
Total manufacturing overhead applied.....	<u>\$11,900</u>

The selling price for Job C would be calculated as follows:

Direct materials.....	\$15,600
Direct labor cost.....	25,100
Manufacturing overhead applied	16,600
Total manufacturing cost	\$57,300
Markup (20%)	11,460
Selling price	<u>\$68,760</u>

The selling price for Job M would be calculated as follows:

Direct materials.....	\$8,600
Direct labor cost.....	8,300
Manufacturing overhead applied	11,900
Total manufacturing cost	\$28,800
Markup (20%)	5,760
Selling price	<u>\$34,560</u>

[QUESTION]

273. Amason Corporation has two production departments, Forming and Assembly. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Forming Department's predetermined overhead rate is based on machine-hours and the Assembly Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Forming	Assembly
Machine-hours	16,000	11,000
Direct labor-hours	2,000	6,000
Total fixed manufacturing overhead cost	\$102,400	\$66,000
Variable manufacturing overhead per machine-hour	\$1.90	
Variable manufacturing overhead per direct labor-hour		\$3.80

During the current month the company started and finished Job A950. The following data were recorded for this job:

Job A950:	Forming	Assembly
Machine-hours	50	20
Direct labor-hours	20	40
Direct materials	\$665	\$415
Direct labor cost	\$520	\$1,040

Required:

Calculate the selling price for Job A950 if the company marks up its unit product costs by 30% to determine selling prices.

Answer:

Forming Department:

Forming Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)

= \$102,400 + (\$1.90 per machine-hour × 16,000 machine-hours)

= \$102,400 + \$30,400 = \$132,800

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the
= \$132,800 ÷ 16,000 machine-hours = \$8.30 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$8.30 per machine-hour × 50 machine-hours = \$415

Assembly Department:

Assembly Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)

= \$66,000 + (\$3.80 per direct labor-hour × 6,000 direct labor-hours)

= \$66,000 + \$22,800 = \$88,800

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the
= \$88,800 ÷ 6,000 direct labor-hours = \$14.80 per direct labor-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$14.80 per direct labor-hour × 40 direct labor-hours = \$592

Overhead applied to Job A950

Forming Department	\$415
Assembly Department	592
Total.....	<u>\$1,007</u>

	Forming	Assembly	Total
Direct materials.....	\$665	\$415	\$1,080
Direct labor	\$520	\$1,040	1,560

[QUESTION]

274. Dancel Corporation has two production departments, Milling and Finishing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Milling Department's predetermined overhead rate is based on machine-hours and the Finishing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Milling	Finishing
Machine-hours.....	17,000	14,000
Direct labor-hours	1,000	6,000
Total fixed manufacturing overhead cost	\$91,800	\$64,200
Variable manufacturing overhead per machine-hour	\$2.00	
Variable manufacturing overhead per direct labor-hour....		\$3.40

During the current month the company started and finished Job M565. The following data were recorded for this job:

Job M565:	Milling	Finishing
Machine-hours.....	70	20
Direct labor-hours	10	40
Direct materials.....	\$750	\$360
Direct labor cost.....	\$340	\$1,360

Required:

- Calculate the total amount of overhead applied to Job M565 in both departments.
- Calculate the total job cost for Job M565.

c. Calculate the selling price for Job M565 if the company marks up its unit product costs by 20% to determine selling prices.

Answer:

a. Milling Department:

Milling Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)

= \$91,800 + (\$2.00 per machine-hour × 17,000 machine-hours)

= \$91,800 + \$34,000 = \$125,800

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the = \$125,800 ÷ 17,000 machine-hours = \$7.40 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$7.40 per machine-hour × 70 machine-hours = \$518

Finishing Department:

Finishing Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)

= \$64,200 + (\$3.40 per direct labor-hour × 6,000 direct labor-hours)

= \$64,200 + \$20,400 = \$84,600

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the = \$84,600 ÷ 6,000 direct labor-hours = \$14.10 per direct labor-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$14.10 per direct labor-hour × 40 direct labor-hours = \$564

Overhead applied to Job M565

Milling Department	\$518
Finishing Department	564
Total.....	<u>\$1,082</u>

b.

	Milling	Finishing	Total
Direct materials.....	\$750	\$360	\$1,110
Direct labor	\$340	\$1,360	1,700
Manufacturing overhead applied ...	\$518	\$564	1,082

[QUESTION]

275. Pangle Corporation has two production departments, Forming and Customizing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Forming Department's predetermined overhead rate is based on machine-hours and the Customizing

Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Forming	Customizing
Machine-hours	16,000	12,000
Direct labor-hours	4,000	9,000
Total fixed manufacturing overhead cost	\$91,200	\$99,000
Variable manufacturing overhead per machine-hour	\$2.10	
Variable manufacturing overhead per direct labor-hour		\$3.10

During the current month the company started and finished Job M109. The following data were recorded for this job:

Job M109:	Forming	Customizing
Machine-hours	50	30
Direct labor-hours	20	50
Direct materials	\$915	\$355
Direct labor cost	\$620	\$1,550

Required:

Calculate the total job cost for Job M109.

Answer:

Forming Department:

Forming Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)

= \$91,200 + (\$2.10 per machine-hour × 16,000 machine-hours)

= \$91,200 + \$33,600 = \$124,800

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the
= \$124,800 ÷ 16,000 machine-hours = \$7.80 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$7.80 per machine-hour × 50 machine-hours = \$390

Customizing Department:

Customizing Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)

= \$99,000 + (\$3.10 per direct labor-hour × 9,000 direct labor-hours)

= \$99,000 + \$27,900 = \$126,900

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the
= \$126,900 ÷ 9,000 direct labor-hours = \$14.10 per direct labor-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$14.10 per direct labor-hour × 50 direct labor-hours = \$705

Overhead applied to Job M109

Forming Department	\$390
Customizing Department	705
Total	<u>\$1,095</u>

	Forming	Customizing	Total
Direct materials	\$915	\$355	\$1,270
Direct labor	\$620	\$1,550	2,170

[QUESTION]

276. Vasilopoulos Corporation has two production departments, Casting and Assembly. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Casting Department's predetermined overhead rate is based on machine-hours and the Assembly Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Casting	Assembly
Machine-hours	17,000	11,000
Direct labor-hours	3,000	6,000
Total fixed manufacturing overhead cost	\$119,000	\$51,000
Variable manufacturing overhead per machine-hour	\$2.10	
Variable manufacturing overhead per direct labor-hour		\$3.10

During the current month the company started and finished Job A182. The following data were recorded for this job:

Job A182:	Casting	Assembly
Machine-hours	50	20
Direct labor-hours	10	50
Direct materials	\$895	\$365
Direct labor cost	\$240	\$1,200

Required:

- Calculate the estimated total manufacturing overhead for the Casting Department.
- Calculate the estimated total manufacturing overhead for the Assembly Department.
- Calculate the predetermined overhead rate for the Casting Department.
- Calculate the predetermined overhead rate for the Assembly Department.
- Calculate the total amount of overhead applied to Job A182 in both departments.
- Calculate the total job cost for Job A182.
- Calculate the selling price for Job A182 if the company marks up its unit product costs by 20% to determine selling prices.

Answer:

a. Casting Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)
= \$119,000 + (\$2.10 per machine-hour × 17,000 machine-hours)
= \$119,000 + \$35,700 = \$154,700

b. Assembly Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)
= \$51,000 + (\$3.10 per direct labor-hour × 6,000 direct labor-hours)
= \$51,000 + \$18,600 = \$69,600

c. Casting Department:

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the
= \$154,700 ÷ 17,000 machine-hours = \$9.10 per machine-hour

d. Assembly Department:

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the
 = \$69,600 ÷ 6,000 direct labor-hours = \$11.60 per direct labor-hour

e. Casting Department: Overhead applied to a particular job = Predetermined overhead rate × Amount of the
 allocation base incurred by the job = \$9.10 per machine-hour × 50 machine-hours = \$455

Assembly Department: Overhead applied to a particular job = Predetermined overhead rate × Amount of the
 allocation base incurred by the job = \$11.60 per direct labor-hour × 50 direct labor-hours = \$580

Overhead applied to Job A182

[QUESTION]

277. Hultquist Corporation has two manufacturing departments--Forming and Customizing. The company used the following data at the beginning of the period to calculate predetermined overhead rates:

	Forming	Customizing	Total
Estimated total machine-hours (MHs)	9,000	1,000	10,000
Estimated total fixed manufacturing overhead cost	\$50,400	\$2,600	\$53,000
Estimated variable manufacturing overhead cost per MH ...	\$1.70	\$2.10	

During the period, the company started and completed two jobs--Job C and Job L. Data concerning those two jobs follow:

	Job C	Job L
Direct materials.....	\$15,100	\$6,900
Direct labor cost.....	\$20,800	\$8,500
Forming machine-hours	6,100	2,900
Customizing machine-hours.....	400	600

Required:

- Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. Calculate that overhead rate.
- Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. Calculate the amount of manufacturing overhead applied to Job L.
- Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. Calculate the total manufacturing cost assigned to Job L.
- Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours and uses a markup of 80% on manufacturing cost to establish selling prices. Calculate the selling price for Job L.
- Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both departments. What is the *departmental* predetermined overhead rate in the Forming department?
- Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both production departments. What is the *departmental* predetermined overhead rate in the Customizing department?
- Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both production departments. How much manufacturing overhead will be applied to Job L?
- Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both production departments. Further assume that the company uses a markup of 80% on manufacturing cost to establish selling prices. Calculate the selling price for Job L.

Answer:

- The first step is to calculate the estimated total overhead costs in the two departments.

Forming

Estimated fixed manufacturing overhead	\$50,400
Estimated variable manufacturing overhead (\$1.70 per MH × 9,000 MHs)	15,300
Estimated total manufacturing overhead cost	<u>\$65,700</u>

Customizing

Estimated fixed manufacturing overhead	\$2,600
Estimated variable manufacturing overhead (\$2.10 per MH × 1,000 MHs)	2,100
Estimated total manufacturing overhead cost	<u>\$4,700</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$65,700 + \$4,700 = \$70,400) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$70,400	
Estimated total machine hours	10,000	MHs
Predetermined overhead rate.....	\$7.04	per MH

- The overhead applied to Job L is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job
= \$7.04 per MH x (2,900 MHs + 600 MHs)
= \$7.04 per MH x (3,500 MHs)
= \$24,640

- Job L's manufacturing cost:

Direct materials.....	\$6,900
Direct labor cost.....	8,500
Manufacturing overhead applied	24,640
Total manufacturing cost	<u>\$40,040</u>

- The selling price for Job L:

Total manufacturing cost	\$40,040
Markup (80%)	<u>32,032</u>

Selling price	<u>\$72,072</u>
---------------------	-----------------

e. Forming Department predetermined overhead rate:

Estimated fixed manufacturing overhead	\$50,400	
Estimated variable manufacturing overhead (\$1.70 per MH × 9,000 MHs)	<u>15,300</u>	
Estimated total manufacturing overhead cost (a)	\$65,700	
Estimated total machine-hours (b)	9,000	MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$7.30	per MH

f. Customizing Department predetermined overhead rate:

Estimated fixed manufacturing overhead	\$2,600	
Estimated variable manufacturing overhead (\$2.10 per MH × 1,000 MHs)	<u>2,100</u>	
Estimated total manufacturing overhead cost (a)	\$4,700	
Estimated total machine-hours (b)	1,000	MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$4.70	per MH

g. Manufacturing overhead applied to Job L:

Forming (\$7.30 per MH × 2,900 MHs)	\$21,170
Customizing (\$4.70 per MH × 600 MHs)	<u>2,820</u>
Total manufacturing overhead applied	<u>\$23,990</u>

h. The selling price for Job L would be calculated as follows:

Direct materials	\$6,900
Direct labor cost	8,500
Manufacturing overhead applied	<u>23,990</u>
Total manufacturing cost	\$39,390
Markup (80%)	<u>31,512</u>
Selling price	<u>\$70,902</u>

[QUESTION]

278. Carcana Corporation has two manufacturing departments--Machining and Finishing. The company used the following data at the beginning of the period to calculate predetermined overhead rates:

	Machining	Finishing	Total
Estimated total machine-hours (MHs)	1,000	4,000	5,000
Estimated total fixed manufacturing overhead cost	\$4,200	\$8,800	\$13,000
Estimated variable manufacturing overhead cost per MH ...	\$1.90	\$2.90	

During the period, the company started and completed two jobs--Job E and Job G. Data concerning those two jobs follow:

	Job E	Job G
Direct materials	\$11,800	\$8,000
Direct labor cost	\$19,200	\$6,700
Machining machine-hours	700	300

Finishing machine-hours	1,600	2,400
-------------------------------	-------	-------

Required:

- Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both departments. What is the *departmental* predetermined overhead rate in the Machining department?
- Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both production departments. What is the *departmental* predetermined overhead rate in the Finishing department?
- Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both production departments. How much manufacturing overhead will be applied to Job E?
- Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both production departments. How much manufacturing overhead will be applied to Job G?
- Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both production departments. Further assume that the company uses a markup of 80% on manufacturing cost to establish selling prices. Calculate the selling price for Job E.
- Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both production departments. Further assume that the company uses a markup of 80% on manufacturing cost to establish selling prices. Calculate the selling price for Job G.
- Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both production departments. If both jobs were sold during the month, what was the company's cost of goods sold for the month?

Answer:

- Machining Department predetermined overhead rate:

Estimated fixed manufacturing overhead	\$4,200	
Estimated variable manufacturing overhead (\$1.90 per MH × 1,000 MHs)	1,900	
Estimated total manufacturing overhead cost (a)	<u>\$6,100</u>	
Estimated total machine-hours (b)	1,000	MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$6.10	per MH

- Finishing Department predetermined overhead rate:

Estimated fixed manufacturing overhead	\$8,800	
Estimated variable manufacturing overhead (\$2.90 per MH × 4,000 MHs)	<u>11,600</u>	
Estimated total manufacturing overhead cost (a)	\$20,400	
Estimated total machine-hours (b)	4,000	MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$5.10	per MH

- Manufacturing overhead applied to Job E:

Machining (\$6.10 per MH × 700 MHs)	\$4,270
Finishing (\$5.10 per MH × 1,600 MHs)	<u>8,160</u>
Total manufacturing overhead applied	<u>\$12,430</u>

- Manufacturing overhead applied to Job G:

Machining (\$6.10 per MH × 300 MHs)	\$1,830
Finishing (\$5.10 per MH × 2,400 MHs)	<u>12,240</u>
Total manufacturing overhead applied	<u>\$14,070</u>

- The selling price for Job E would be calculated as follows:

Direct materials	\$11,800
Direct labor cost	19,200
Manufacturing overhead applied	<u>12,430</u>
Total manufacturing cost	\$43,430
Markup (80%)	<u>34,744</u>
Selling price	<u>\$78,174</u>

f. The selling price for Job G would be calculated as follows:

Direct materials.....	\$8,000
Direct labor cost.....	6,700
Manufacturing overhead applied.....	14,070
Total manufacturing cost.....	<u>\$28,770</u>
Markup (80%).....	23,016
Selling price.....	<u>\$51,786</u>

g.

Total manufacturing cost Job E.....	\$43,430

[QUESTION]

279. Braegelmann Corporation has two production departments, Casting and Assembly. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Casting Department's predetermined overhead rate is based on machine-hours and the Assembly Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Casting	Assembly
Machine-hours.....	20,000	14,000
Direct labor-hours.....	4,000	6,000
Total fixed manufacturing overhead cost.....	\$110,000	\$65,400
Variable manufacturing overhead per machine-hour.....	\$1.60	
Variable manufacturing overhead per direct labor-hour....		\$4.50

During the current month the company started and finished Job K246. The following data were recorded for this job:

Job K246:	Casting	Assembly
Machine-hours.....	60	30
Direct labor-hours.....	20	40
Direct materials.....	\$950	\$305
Direct labor cost.....	\$460	\$920

Required:

- Calculate the estimated total manufacturing overhead for the Casting Department.
- Calculate the estimated total manufacturing overhead for the Assembly Department.
- Calculate the predetermined overhead rate for the Casting Department.
- Calculate the predetermined overhead rate for the Assembly Department.
- Calculate the amount of overhead applied in the Casting Department to Job K246.
- Calculate the amount of overhead applied in the Assembly Department to Job K246.
- Calculate the total job cost for Job K246.

h. Calculate the selling price for Job K246 if the company marks up its unit product costs by 40% to determine selling prices.

Answer:

a. Casting Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)
 = \$110,000 + (\$1.60 per machine-hour × 20,000 machine-hours)
 = \$110,000 + \$32,000 = \$142,000

b. Assembly Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)
 = \$65,400 + (\$4.50 per direct labor-hour × 6,000 direct labor-hours)
 = \$65,400 + \$27,000 = \$92,400

c. Casting Department:

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the
 = \$142,000 ÷ 20,000 machine-hours = \$7.10 per machine-hour

d. Assembly Department:

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the
 = \$92,400 ÷ 6,000 direct labor-hours = \$15.40 per direct labor-hour

e. Casting Department:

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$7.10 per machine-hour × 60 machine-hours = \$426

f. Assembly Department:

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$15.40 per direct labor-hour × 40 direct labor-hours = \$616

g.

	Casting	Assembly	Total
Direct materials.....	\$950	\$305	\$1,255
Direct labor	\$460	\$920	1,380
Manufacturing overhead applied ...	\$426	\$616	1,042
Total cost of Job K246.....			<u>\$3,677</u>

h.

Total cost of Job K246.....	\$3,677.00
Markup (\$3,677.00 × 40%).	1,470.80
Selling price	<u>\$5,147.80</u>

[QUESTION]

280. Matrejek Corporation has two manufacturing departments--Forming and Customizing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

Forming	Customizing	Total
---------	-------------	-------

Estimated total machine-hours (MHs)	8,000	2,000	10,000
Estimated total fixed manufacturing overhead cost	\$36,800	\$4,800	\$41,600
Estimated variable manufacturing overhead cost per MH ...	\$1.60	\$2.90	

During the most recent month, the company started and completed two jobs--Job D and Job K. There were no beginning inventories. Data concerning those two jobs follow:

	Job D	Job K
Direct materials.....	\$15,600	\$6,900
Direct labor cost.....	\$19,100	\$8,700
Forming machine-hours	5,400	2,600
Customizing machine-hours.....	800	1,200

Required:

- Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours and uses a markup of 50% on manufacturing cost to establish selling prices. Calculate the selling price for Job D.
- Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours and uses a markup of 50% on manufacturing cost to establish selling prices. Calculate the selling price for Job K.
- Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both production departments. Further assume that the company uses a markup of 50% on manufacturing cost to establish selling prices. Calculate the selling price for Job D.
- Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both production departments. Further assume that the company uses a markup of 50% on manufacturing cost to establish selling prices. Calculate the selling price for Job K.

Answer:

- The first step is to calculate the estimated total overhead costs in the two departments.

Forming

Estimated fixed manufacturing overhead	\$36,800
Estimated variable manufacturing overhead (\$1.60 per MH × 8,000 MHs)	12,800
Estimated total manufacturing overhead cost	<u>\$49,600</u>

Customizing

Estimated fixed manufacturing overhead	\$4,800
Estimated variable manufacturing overhead (\$2.90 per MH × 2,000 MHs)	5,800
Estimated total manufacturing overhead cost	<u>\$10,600</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$49,600 + \$10,600 = \$60,200) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$60,200	
Estimated total machine hours	10,000	MHs
Predetermined overhead rate.....	\$6.02	per MH

The overhead applied to Job D is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate × Machine-hours incurred by the job
= \$6.02 per MH × (5,400 MHs + 800 MHs)
= \$6.02 per MH × (6,200 MHs)
= \$37,324

The selling price for Job D:

Direct materials.....	\$15,600
Direct labor cost.....	19,100

Manufacturing overhead applied	37,324
Total manufacturing cost	\$72,024
Markup (50%)	36,012
Selling price	<u>\$108,036</u>

b. The overhead applied to Job K is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job
= \$6.02 per MH x (2,600 MHs + 1,200 MHs)
= \$6.02 per MH x (3,800 MHs)
= \$22,876

Job K's manufacturing cost:

Direct materials.....	\$6,900
Direct labor cost.....	8,700
Manufacturing overhead applied	22,876
Total manufacturing cost	<u>\$38,476</u>

The selling price for Job K:

Total manufacturing cost	\$38,476
Markup (50%)	19,238
Selling price	<u>\$57,714</u>

c. Forming Department predetermined overhead rate:

Estimated fixed manufacturing overhead	\$36,800	
Estimated variable manufacturing overhead (\$1.60 per MH x 8,000 MHs)	12,800	
Estimated total manufacturing overhead cost (a)	<u>\$49,600</u>	
Estimated total machine-hours (b)	8,000	MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$6.20	per MH

Customizing Department predetermined overhead rate:

Estimated fixed manufacturing overhead	\$4,800	
Estimated variable manufacturing overhead (\$2.90 per MH x 2,000 MHs)	5,800	
Estimated total manufacturing overhead cost (a)	<u>\$10,600</u>	
Estimated total machine-hours (b)	2,000	MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$5.30	per MH

Manufacturing overhead applied to Job D:

Forming (\$6.20 per MH x 5,400 MHs)	\$33,480
Customizing (\$5.30 per MH x 800 MHs)	4,240
Total manufacturing overhead applied	<u>\$37,720</u>

The selling price for Job D would be calculated as follows:

Direct materials.....	\$15,600
Direct labor cost.....	19,100
Manufacturing overhead applied	37,720
Total manufacturing cost	\$72,420
Markup (50%)	36,210
Selling price	<u>\$108,630</u>

d. Manufacturing overhead applied to Job K:

Forming (\$6.20 per MH x 2,600 MHs)	\$16,120
Customizing (\$5.30 per MH x 1,200 MHs)	6,360
Total manufacturing overhead applied	<u>\$22,480</u>

The selling price for Job K would be calculated as follows:

Direct materials.....	\$6,900
Direct labor cost.....	8,700
Manufacturing overhead applied.....	22,480
Total manufacturing cost.....	<u>\$38,080</u>
Markup (50%).....	19,040
Selling price.....	<u>\$57,120</u>

[QUESTION]

281. Harnett Corporation has two manufacturing departments--Molding and Assembly. The company used the following data at the beginning of the period to calculate predetermined overhead rates:

	Molding	Assembly	Total
Estimated total machine-hours (MHs).....	5,000	5,000	10,000
Estimated total fixed manufacturing overhead cost	\$29,000	\$13,500	\$42,500
Estimated variable manufacturing overhead cost per MH ...	\$1.20	\$2.30	

During the period, the company started and completed two jobs--Job E and Job M. Data concerning those two jobs follow:

	Job E	Job M
Direct materials.....	\$14,300	\$9,400
Direct labor cost.....	\$22,800	\$8,900
Molding machine-hours	3,400	1,600
Assembly machine-hours	2,000	3,000

Required:

- Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. Calculate that overhead rate.
- Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. Calculate the amount of manufacturing overhead applied to Job E.
- Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. Calculate the total manufacturing cost assigned to Job E.
- Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours and uses a markup of 60% on manufacturing cost to establish selling prices. Calculate the selling price for Job E.
- Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both departments. What is the *departmental* predetermined overhead rate in the Molding department?
- Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both production departments. What is the *departmental* predetermined overhead rate in the Assembly department?
- Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both production departments. How much manufacturing overhead will be applied to Job E?
- Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both production departments. Further assume that the company uses a markup of 60% on manufacturing cost to establish selling prices. Calculate the selling price for Job E.

Answer:

a. The first step is to calculate the estimated total overhead costs in the two departments.

Molding

Estimated fixed manufacturing overhead	\$29,000
Estimated variable manufacturing overhead (\$1.20 per MH × 5,000 MHs)	6,000
Estimated total manufacturing overhead cost	<u>\$35,000</u>

Assembly

Estimated fixed manufacturing overhead	\$13,500
Estimated variable manufacturing overhead (\$2.30 per MH × 5,000 MHs)	11,500
Estimated total manufacturing overhead cost	<u>\$25,000</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$35,000 + \$25,000 = \$60,000) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$60,000	
Estimated total machine hours	10,000	MHs
Predetermined overhead rate.....	\$6.00	per MH

b. The overhead applied to Job E is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate × Machine-hours incurred by the job

= \$6.00 per MH × (3,400 MHs + 2,000 MHs)

= \$6.00 per MH × (5,400 MHs)

= \$32,400

c. Job E's manufacturing cost:

Direct materials.....	\$14,300
Direct labor cost.....	22,800
Manufacturing overhead applied	32,400
Total manufacturing cost	<u>\$69,500</u>

d. The selling price for Job E:

Total manufacturing cost	\$69,500
Markup (60%)	41,700
Selling price	<u>\$111,200</u>

e. Molding Department predetermined overhead rate:

Estimated fixed manufacturing overhead	\$29,000	
Estimated variable manufacturing overhead (\$1.20 per MH × 5,000 MHs)	6,000	
Estimated total manufacturing overhead cost (a)	\$35,000	
Estimated total machine-hours (b)	5,000	MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$7.00	per MH

f. Assembly Department predetermined overhead rate:

Estimated fixed manufacturing overhead	\$13,500	
Estimated variable manufacturing overhead (\$2.30 per MH × 5,000 MHs)	11,500	
Estimated total manufacturing overhead cost (a)	\$25,000	
Estimated total machine-hours (b)	5,000	MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$5.00	per MH

g. Manufacturing overhead applied to Job E:

Molding (\$7.00 per MH × 3,400 MHs)	\$23,800
Assembly (\$5.00 per MH × 2,000 MHs)	10,000
Total manufacturing overhead applied	<u>\$33,800</u>

h. The selling price for Job E would be calculated as follows:

Direct materials.....	\$14,300
Direct labor cost.....	22,800
Manufacturing overhead applied.....	33,800
Total manufacturing cost	<u>\$70,900</u>
Markup (60%)	42,540
	<u>\$113,44</u>
Selling price	<u>0</u>

[QUESTION]

282. Bulla Corporation has two production departments, Machining and Customizing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Machining Department's predetermined overhead rate is based on machine-hours and the Customizing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Machining	Customizing
Machine-hours.....	19,000	13,000
Direct labor-hours	2,000	9,000
Total fixed manufacturing overhead cost	\$98,800	\$84,600
Variable manufacturing overhead per machine-hour	\$2.10	
Variable manufacturing overhead per direct labor-hour....		\$3.60

During the current month the company started and finished Job K369. The following data were recorded for this job:

Job K369:	Machining	Customizing
Machine-hours.....	90	10
Direct labor-hours	20	50

Required:

Calculate the total amount of overhead applied to Job K369 in both departments.

Answer:

Machining Department:

Machining Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)

= \$98,800 + (\$2.10 per machine-hour × 19,000 machine-hours)

= \$98,800 + \$39,900 = \$138,700

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the
= \$138,700 ÷ 19,000 machine-hours = \$7.30 per machine-hour

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$7.30 per machine-hour × 90 machine-hours = \$657

Customizing Department:

Customizing Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)
= \$84,600 + (\$3.60 per direct labor-hour × 9,000 direct labor-hours)
= \$84,600 + \$32,400 = \$117,000
Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the
= \$117,000 ÷ 9,000 direct labor-hours = \$13.00 per direct labor-hour
Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$13.00 per direct labor-hour × 50 direct labor-hours = \$650

Overhead applied to Job K369

Machining Department	\$657
Customizing Department.....	650
Total.....	<u>\$1,307</u>

Difficulty: 1 Easy

[QUESTION]

283. Bierce Corporation has two manufacturing departments--Machining and Finishing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Machining	Finishing	Total
Estimated total machine-hours (MHs)	4,000	1,000	5,000
Estimated total fixed manufacturing overhead cost	\$20,000	\$2,100	\$22,100
Estimated variable manufacturing overhead cost per MH ...	\$1.40	\$2.80	

During the most recent month, the company started and completed two jobs--Job B and Job K. There were no beginning inventories. Data concerning those two jobs follow:

	Job B	Job K
Direct materials.....	\$12,800	\$7,900
Direct labor cost.....	\$24,700	\$6,400
Machining machine-hours	2,700	1,300
Finishing machine-hours	400	600

Required:

- Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. Calculate that overhead rate.
- Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. Calculate the amount of manufacturing overhead applied to Job B.
- Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. Calculate the amount of manufacturing overhead applied to Job K.
- Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both departments. What is the *departmental* predetermined overhead rate in the Machining department?
- Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both production departments. What is the *departmental* predetermined overhead rate in the Finishing department?
- Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both production departments. How much manufacturing overhead will be applied to Job B?

g. Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both production departments. How much manufacturing overhead will be applied to Job K?

Answer:

a. The first step is to calculate the estimated total overhead costs in the two departments.

Machining

Estimated fixed manufacturing overhead	\$20,000
Estimated variable manufacturing overhead (\$1.40 per MH × 4,000 MHs)	5,600
Estimated total manufacturing overhead cost	<u>\$25,600</u>

Finishing

Estimated fixed manufacturing overhead	\$2,100
Estimated variable manufacturing overhead (\$2.80 per MH × 1,000 MHs)	2,800
Estimated total manufacturing overhead cost	<u>\$4,900</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$25,600 + \$4,900 = \$30,500) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$30,500	
Estimated total machine hours	5,000	MHs
Predetermined overhead rate	\$6.10	per MH

b. The overhead applied to Job B is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate × Machine-hours incurred by the job
= \$6.10 per MH × (2,700 MHs + 400 MHs)
= \$6.10 per MH × (3,100 MHs)
= \$18,910

c. The overhead applied to Job K is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate × Machine-hours incurred by the job
= \$6.10 per MH × (1,300 MHs + 600 MHs)
= \$6.10 per MH × (1,900 MHs)
= \$11,590

d. Machining Department predetermined overhead rate:

Estimated fixed manufacturing overhead	\$20,000	
Estimated variable manufacturing overhead (\$1.40 per MH × 4,000 MHs)	5,600	
Estimated total manufacturing overhead cost (a)	\$25,600	
Estimated total machine-hours (b)	4,000	MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$6.40	per MH

e. Finishing Department predetermined overhead rate:

Estimated fixed manufacturing overhead	\$2,100	
Estimated variable manufacturing overhead (\$2.80 per MH × 1,000 MHs)	2,800	
Estimated total manufacturing overhead cost (a)	\$4,900	
Estimated total machine-hours (b)	1,000	MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$4.90	per MH

f. Manufacturing overhead applied to Job B:

Machining (\$6.40 per MH × 2,700 MHs)	\$17,280
Finishing (\$4.90 per MH × 400 MHs)	1,960
Total manufacturing overhead applied	<u>\$19,240</u>

g. Manufacturing overhead applied to Job K:

Machining (\$6.40 per MH × 1,300 MHs)	\$8,320
---	---------

Finishing (\$4.90 per MH × 600 MHs)	2,940
Total manufacturing overhead applied	<u>\$11,260</u>

[QUESTION]

284. Gercak Corporation has two production departments, Forming and Assembly. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Forming Department's predetermined overhead rate is based on machine-hours and the Assembly Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Forming	Assembly
Machine-hours	16,000	11,000
Direct labor-hours	2,000	7,000
Total fixed manufacturing overhead cost	\$100,800	\$76,300
Variable manufacturing overhead per machine-hour	\$1.70	
Variable manufacturing overhead per direct labor-hour		\$3.10

During the current month the company started and finished Job X560. The following data were recorded for this job:

Job X560:	Forming	Assembly
Machine-hours	50	30
Direct labor-hours	30	40

Required:

a. Calculate the estimated total manufacturing overhead for the Assembly Department.

b. Calculate the predetermined overhead rate for the Forming Department.

c. Calculate the total amount of overhead applied to Job X560 in both departments.

Answer:

a. Assembly Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)

= \$76,300 + (\$3.10 per direct labor-hour × 7,000 direct labor-hours)

= \$76,300 + \$21,700 = \$98,000

b. Forming Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)

= \$100,800 + (\$1.70 per machine-hour × 16,000 machine-hours)

= \$100,800 + \$27,200 = \$128,000

Forming Department: Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the = \$128,000 ÷ 16,000 machine-hours = \$8.00 per machine-hour

c. Forming Department: Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$8.00 per machine-hour × 50 machine-hours = \$400

Assembly Department: Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the = \$98,000 ÷ 7,000 direct labor-hours = \$14.00 per direct labor-hour

Assembly Department: Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$14.00 per direct labor-hour × 40 direct labor-hours = \$560

Overhead applied to Job X560	
Forming Department	\$400
Assembly Department	560
Total.....	<u>\$960</u>

[QUESTION]

285. Sonneborn Corporation has two manufacturing departments--Molding and Customizing. The company used the following data at the beginning of the year to calculate predetermined overhead rates:

	Molding	Customizing	Total
Estimated total machine-hours (MHs)	1,000	9,000	10,000
Estimated total fixed manufacturing overhead cost	\$5,100	\$23,400	\$28,500
Estimated variable manufacturing overhead cost per MH ...	\$1.50	\$2.50	

During the most recent month, the company started and completed two jobs--Job D and Job G. There were no beginning inventories. Data concerning those two jobs follow:

	Job D	Job G
Direct materials.....	\$14,700	\$9,100
Direct labor cost.....	\$18,800	\$8,300
Molding machine-hours	700	300
Customizing machine-hours.....	3,600	5,400

Required:

- Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. Calculate the amount of manufacturing overhead applied to Job D.
- Assume that the company uses a *plantwide* predetermined manufacturing overhead rate based on machine-hours. Calculate the amount of manufacturing overhead applied to Job G.
- Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both production departments. How much manufacturing overhead will be applied to Job D?
- Assume that the company uses *departmental* predetermined overhead rates with machine-hours as the allocation base in both production departments. How much manufacturing overhead will be applied to Job G?

Answer:

- The first step is to calculate the estimated total overhead costs in the two departments.

Molding

Estimated fixed manufacturing overhead	\$5,100
Estimated variable manufacturing overhead (\$1.50 per MH × 1,000 MHs)	1,500
Estimated total manufacturing overhead cost	<u>\$6,600</u>

Customizing

Estimated fixed manufacturing overhead	\$23,400
Estimated variable manufacturing overhead (\$2.50 per MH × 9,000 MHs)	22,500
Estimated total manufacturing overhead cost	<u>\$45,900</u>

The second step is to combine the estimated manufacturing overhead costs in the two departments (\$6,600 + \$45,900 = \$52,500) to calculate the plantwide predetermined overhead rate as follow:

Estimated total manufacturing overhead cost	\$52,500	
Estimated total machine hours	10,000	MHs
Predetermined overhead rate.....	\$5.25	per MH

The overhead applied to Job D is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job
= \$5.25 per MH x (700 MHs + 3,600 MHs)
= \$5.25 per MH x (4,300 MHs)
= \$22,575

b. The overhead applied to Job G is calculated as follows:

Overhead applied to a particular job = Predetermined overhead rate x Machine-hours incurred by the job
= \$5.25 per MH x (300 MHs + 5,400 MHs)
= \$5.25 per MH x (5,700 MHs)
= \$29,925

c. Molding Department predetermined overhead rate:

Estimated fixed manufacturing overhead	\$5,100	
Estimated variable manufacturing overhead (\$1.50 per MH x 1,000 MHs)	1,500	
Estimated total manufacturing overhead cost (a)	\$6,600	
Estimated total machine-hours (b)	1,000	MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$6.60	per MH

Customizing Department predetermined overhead rate:

Estimated fixed manufacturing overhead	\$23,400	
Estimated variable manufacturing overhead (\$2.50 per MH x 9,000 MHs)	22,500	
Estimated total manufacturing overhead cost (a)	\$45,900	
Estimated total machine-hours (b)	9,000	MHs
Departmental predetermined overhead rate (a) ÷ (b)	\$5.10	per MH

Manufacturing overhead applied to Job D:

Molding (\$6.60 per MH x 700 MHs)	\$4,620
Customizing (\$5.10 per MH x 3,600 MHs)	18,360
Total manufacturing overhead applied	<u>\$22,980</u>

d. Manufacturing overhead applied to Job G:

Molding (\$6.60 per MH x 300 MHs)	\$1,980
Customizing (\$5.10 per MH x 5,400 MHs)	27,540
Total manufacturing overhead applied	<u>\$29,520</u>

[QUESTION]

286. Rocher Corporation has two production departments, Casting and Finishing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The

Casting Department's predetermined overhead rate is based on machine-hours and the Finishing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Casting	Finishing
Machine-hours.....	17,000	13,000
Direct labor-hours.....	4,000	6,000
Total fixed manufacturing overhead cost	\$124,100	\$52,200
Variable manufacturing overhead per machine-hour	\$2.30	
Variable manufacturing overhead per direct labor-hour....		\$4.00

During the current month the company started and finished Job A394. The following data were recorded for this job:

Job A394:	Casting	Finishing
Machine-hours.....	80	20
Direct labor-hours	10	40

Required:

- Calculate the estimated total manufacturing overhead for the Casting Department.
- Calculate the predetermined overhead rate for the Casting Department.
- Calculate the amount of overhead applied in the Casting Department to Job A394.

Answer:

a. Casting Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)
= \$124,100 + (\$2.30 per machine-hour × 17,000 machine-hours)
= \$124,100 + \$39,100 = \$163,200

b. Casting Department:

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the
= \$163,200 ÷ 17,000 machine-hours = \$9.60 per machine-hour

c. Casting Department:

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$9.60 per machine-hour × 80 machine-hours = \$768

Difficulty: 1 Easy

[QUESTION]

287. Marius Corporation has two production departments, Casting and Finishing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Casting Department's predetermined overhead rate is based on machine-hours and the Finishing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Casting	Finishing
Machine-hours.....	18,000	12,000
Direct labor-hours.....	4,000	6,000
Total fixed manufacturing overhead cost	\$118,800	\$57,600

Variable manufacturing overhead per machine-hour	\$2.20	
Variable manufacturing overhead per direct labor-hour....		\$4.00

During the current month the company started and finished Job K895. The following data were recorded for this job:

Job K895:	Casting	Finishing
Machine-hours	70	30
Direct labor-hours	20	60

Required:

- Calculate the estimated total manufacturing overhead for the Finishing Department.
- Calculate the predetermined overhead rate for the Finishing Department.
- Calculate the amount of overhead applied in the Finishing Department to Job K895.

Answer:

a. Finishing Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)
= \$57,600 + (\$4.00 per direct labor-hour × 6,000 direct labor-hours)
= \$57,600 + \$24,000 = \$81,600

b. Finishing Department:

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the
= \$81,600 ÷ 6,000 direct labor-hours = \$13.60 per direct labor-hour

c. Finishing Department:

Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$13.60 per direct labor-hour × 60 direct labor-hours = \$816

Difficulty: 1 Easy

[QUESTION]

288. Madole Corporation has two production departments, Forming and Customizing. The company uses a job-order costing system and computes a predetermined overhead rate in each production department. The Forming Department's predetermined overhead rate is based on machine-hours and the Customizing Department's predetermined overhead rate is based on direct labor-hours. At the beginning of the current year, the company had made the following estimates:

	Forming	Customizing
Machine-hours	19,000	12,000
Direct labor-hours	4,000	8,000
Total fixed manufacturing overhead cost	\$119,700	\$67,200
Variable manufacturing overhead per machine-hour	\$2.00	
Variable manufacturing overhead per direct labor-hour....		\$4.20

During the current month the company started and finished Job K973. The following data were recorded for this job:

Job K973:	Forming	Customizing
Machine-hours	50	20

Direct labor-hours 20 50

Required:

- Calculate the estimated total manufacturing overhead for the Forming Department.
- Calculate the predetermined overhead rate for the Customizing Department.
- Calculate the total overhead applied to Job K973 in both departments.

Answer:

a. Forming Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per machine-hour × Total machine-hours in the department)
 = \$119,700 + (\$2.00 per machine-hour × 19,000 machine-hours)
 = \$119,700 + \$38,000 = \$157,700

b. Customizing Department overhead cost = Fixed manufacturing overhead cost + (Variable overhead cost per direct labor-hour × Total direct labor-hours in the department)
 = \$67,200 + (\$4.20 per direct labor-hour × 8,000 direct labor-hours)
 = \$67,200 + \$33,600 = \$100,800

Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the
 = \$100,800 ÷ 8,000 direct labor-hours = \$12.60 per direct labor-hour

c. Forming Department: Predetermined overhead rate = Estimated total manufacturing overhead cost ÷ Estimated total amount of the = \$157,700 ÷ 19,000 machine-hours = \$8.30 per machine-hour

Forming Department: Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$8.30 per machine-hour × 50 machine-hours = \$415

Customizing Department: Overhead applied to a particular job = Predetermined overhead rate × Amount of the allocation base incurred by the job = \$12.60 per direct labor-hour × 50 direct labor-hours = \$630

Overhead applied to Job K973

Forming Department	\$415
Customizing Department.....	630
Total.....	<u>\$1,045</u>

[QUESTION]

289. Sullen Corporation uses a predetermined overhead rate base on machine-hours that it recalculates at the beginning of each year. The company has provided the following data for the most recent year.

Predetermined overhead rate.....	\$14.30	per machine-hour
Estimated total fixed manufacturing overhead from the beginning of the year	\$572,000	
Estimated activity level from the beginning of the year	40,000	machine-hours
Actual total fixed manufacturing overhead	\$605,000	
Actual activity level	36,700	machine-hours

Required:

Determine the amount of manufacturing overhead that would have been applied to all jobs during the period.

Answer:

Predetermined overhead rate (a)	\$14.30	per machine-hour
Actual activity level (b).....	36,700	machine-hours
Manufacturing overhead applied (a) × (b)	\$524,810	

Difficulty: 1 Easy

[QUESTION]

290. Levi Corporation uses a predetermined overhead rate of \$23.40 per direct labor-hour. This predetermined overhead rate was based on estimated total fixed manufacturing overhead of \$702,000 and 30,000 direct labor-hours for the period. The company incurred actual total fixed manufacturing overhead of \$738,000 and 27,100 total direct labor-hours during the period.

Required:

Determine the amount of manufacturing overhead that would have been applied to all jobs during the period.

Answer:

Predetermined overhead rate (a)	\$23.40	per direct labor-hour
Actual activity level (b).....	27,100	direct labor-hours
Manufacturing overhead applied (a) × (b)	\$634,140	

Difficulty: 1 Easy

[QUESTION]

291. Job 243 was recently completed. The following data have been recorded on its job cost sheet:

Direct materials	\$48,870	
Direct labor-hours	405	labor-hours
Direct labor wage rate	\$13	per labor-hour
Machine-hours	486	machine-hours
Number of units completed	2,700	units

The company applies manufacturing overhead on the basis of machine-hours. The predetermined overhead rate is \$11 per machine-hour.

Required:

Compute the unit product cost that would appear on the job cost sheet for this job.

Answer:

Cost Summary

Direct materials	\$48,870
Direct labor (\$13 per DLH × 405 DLHs)	5,265
Manufacturing overhead (\$11 per MH × 486 MHs).....	5,346
Total product cost	\$59,481
Unit product cost	\$22.03

[QUESTION]

292. Job 652 was recently completed. The following data have been recorded on its job cost sheet:

Direct materials	\$59,400	
Direct labor-hours	1,224	DLHs
Direct labor wage rate	\$15	per DLH
Number of units completed	3,600	units

The company applies manufacturing overhead on the basis of direct labor-hours. The predetermined overhead rate is \$35 per direct labor-hour.

Required:

Compute the unit product cost that would appear on the job cost sheet for this job.

Answer:

Cost Summary

Direct materials	\$59,400
Direct labor (\$15 per DLH × 1,224 DLHs)	18,360
Manufacturing overhead (\$35 per DLH × 1,224 DLHs)	42,840
Total product cost	<u>\$120,600</u>
Unit product cost	\$33.50
