Recall the Application about why people walk up stairs but not escalators to answer the following question(s).

- 12) Weighing the benefits and costs of walking up an escalator versus standing still on an escalator addresses the economic concept known as
- 12)

A) the marginal principle.

- B) the principle of opportunity cost.
- C) the principle of voluntary exchange.
- D) the principle of diminishing returns.

Answer: A

Explanation: A)

- B)
- C)
- D)

Recall the Application about Jasper Johns and house painting to answer the following question(s). In this Application, it is assumed that Johns can earn \$5,000 per day by painting works of art, and therefore should hire a housepainter who charges \$150 per day, and takes 10 days, to paint his house.

- 13) Based on the Application, Jasper Johns' daily earnings are 33.33 times more than the housepainter's daily earnings. If Jasper Johns' earnings per day were only twice as much as the housepainter's earnings, what should he do?
- 13)

- A) He should still hire the housepainter to paint his house.
- B) He should hire a less productive housepainter.
- C) He should remain indifferent as to who paints the house, for the difference in daily earnings would now be much less significant.
- D) He should paint his house himself.

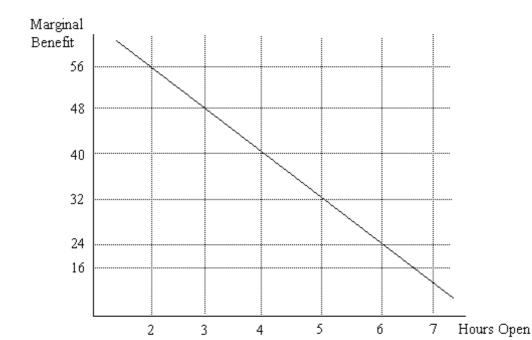

Answer: D

Explanation: A)

B)

Recall the Application about the value of the minimum wage between 1974 and 2007 and the impact inflation has on the real minimum wage to answer the following question(s). The following table is from the Application.

	1974	2007
Minimum wage per hour	\$ 2.00	\$ 5.85
Weekly income from minimum wage	\$80.00	\$234.00
Cost of a standard basket of goods	\$47.00	\$202.00
Number of baskets per week	1.70	1.16

- 18) In comparing the minimum wages between 1974 and 2007, this Application addresses the economic concept of
 - A) the real-nominal principle.

- B) the marginal principle.
- C) the principle of voluntary exchange.
- D) the principle of diminishing returns.

Recall the Application about the time and invested funds that are involved in starting a decorative bottle-cap pin business to answer the following question(s).

- 23) The time and invested funds involved in starting a decorative bottle-cap pin business address the 23) economic concept of
 - A) opportunity cost.
 - C) the real-nominal principle.

B) the principle of diminishing returns.

D) the marginal principle.

Answer: A

Explanation: A)

- B)
- C)
- D)

Additional Application

Summary of the article: Consumer spending stalls, threatens recovery msnbc.com news services August 3, 2010

Reflecting what is being referred to as the "new normal," consumer spending is down, home sales have declined, and personal savings has risen since the start of the recession in 2007, and the continuation of this trend is threatening the economic recovery in the United States. In June 2010, factory orders fell for the second consecutive month, home sales fell by nearly 19 percent compared to June 2009, and personal spending and income remained relatively flat. The personal savings rate, however, has continued to increase, reaching a level of 6.4 percent of after-tax income in June 2010, which is more than three times higher than the average savings rate prior to the start of the recession in 2007. The increase in savings is coming at the expense of consumer spending, and economists worry that households' financial problems could cause a further decline in spending for the second half of 2010.

	ne Application, a tradeoff exists between	24)

SHORT A	ANSWER. Write the word or phrase that best completes each statement or answers the quest	ion.
103)	103) Different people eat different amounts of food when they go to buffet restaurants, even though they all pay the same price. Explain how this relates to the marginal principle.Answer: The marginal monetary cost of eating more is zero, so people will eat until they	
	would not enjoy eating other bite. There is an implicit cost of eating more once you are full (extra weight gain and physical discomfort). Therefore, people will eat until marginal benefit equals marginal cost, and this will occur at different amounts of food for different people.	
	Explanation:	
104)	You are running a small yard maintenance business for the summer. What do you expect to happen to the number of yards you can maintain in a day as you add workers if you don't purchase more capital equipment (like mowers and leaf blowers)?	104)
	Answer: It is likely that as you add workers, you will get incrementally less output out of each additional worker. Holding constant your materials, such as trucks, lawnmowers, etc., you'll almost surely be able to maintain more yards per day. But as you hire more workers, there might be waits for use of the tools, or for transportation to the next job. This is the prediction of the principle of diminishing returns.	
	Explanation:	
105)	What is a marginal benefit?	105)
	Answer: A marginal benefit is the additional benefit resulting from a small increase in the production of a good. Explanation:	
106)	When a firm hired its tenth worker, its factory output increased by four units per month. Would you expect the firm's output to increase by eight more units per month if the firm hired two more workers?	106)
	Answer: No. The principle of diminishing marginal returns suggests that after some point of increasing returns, each incremental worker should have a progressively lower level of marginal productivity. Explanation:	
107)	What is an opportunity cost? Answer: An opportunity cost is what you sacrifice to get something. Explanation:	107)
108)	How would an increase in prices in retail stores change the real value of the money you earn as wages?	108)
	Answer: The real value would decrease. Explanation:	
109)	Explain the concept of diminishing returns.	109)
	Answer: The principle of diminishing returns shows that in the short run, beyond some point, output will increase at a decreasing rate. For example, producing more output in an existing production facility by increasing the number of workers sharing the facility will bring into effect the principle of diminishing returns, as output will eventually increase but at a decreasing rate.	
	Explanation:	

110)	Explain the real-nominal principle.	110)
	Answer: The real-nominal principle explains that what matters to people is the real value of money or income -its purchasing power-and not the face value of money or income.	
	Explanation:	
111)	Consider a firm that is trying to determine how many hours to remain open in a day. How would the firm make this decision?	111)
	Answer: The firm would continue to stay open as long as the incremental, or marginal, benefit of staying open (say, the increased revenues) each extra hour exceeds (or at least equals) the incremental, or marginal, costs (e.g., electricity, wages, etc.) incurred from staying open that hour.	
	Explanation:	
112)	What is the opportunity cost of your college degree?	112)
	Answer: A quick answer would be to say that the cost is the tuition, room and board, and books expenditures that are borne during the college years. But such a statement would be incorrect. First, it understates one aspect of costs: one is giving up income while a student. But it also overstates the costs in another dimension: people would eat and sleep somewhere regardless of their attendance in college. So one should not consider room and board to be part of the cost of college attendance.	
	Explanation:	
113)	What is the opportunity cost of investing \$10,000 of your own money in a business you wish to start?	113)
	Answer: The opportunity cost of your \$10,000 is the money you lose because you cannot invest the money elsewhere. Explanation:	
114)	Is it possible for nominal wages to decrease while real wages increase?	114)
	Answer: Yes, though unlikely. This would imply that prices have fallen, and that the decrease is sufficiently negative to offset any losses in nominal wages.	
	Explanation:	
115)	G .	115)
	Answer: A marginal cost is the additional cost resulting from a small increase in the production of a good.	
	Explanation:	
116)	If your salary increases at a lower rate than prices are increasing, what would happen to your buying power?	116)
	Answer: Vour manay would have less buying nower	

Explanation:

117)	What do economists m	ean when they say that there is no such thing as a free lunch?	117)	
	somebody bo lunch, even the economy gave make the lunc	as a cost, even when you do not pay money for it. Suppose that ught you lunch. Resources from the economy were used to make that hough those resources may not belong to you. Consequently, the e up anything else it could have made with the resources it used to ch. The opportunity cost of that lunch is the lost opportunity to use es in some other way.		
	Explanation:			
118)		iple to explain why government mandated safety features in e 1960s and 1970s resulted in an increase in collisions between les.	118) _	
	wear seat belt speed is less o insulated fror the number o	d safety features decreased the marginal cost of speed: People who is suffer less severe injuries in a collision, so every additional unit of costly to the driver. Drivers felt more secure because they were better in harm in the event of a collision, and so they drove faster. As a result, if collisions between cars and bicycles increased, meaning that safer for drivers led to a more hazardous environment for bicyclists.

Suppose se by six percent and the real rate of return in the stock market was a says that he or she was being more than fair by giving you more as a return. What do you think?	119)	
	the real rate o stock market. keeping it, yo is another exa the money du	f return that would have been enjoyed had the money been put in the For you to have been indifferent between loaning your money versus ur friend should have reimbursed you by \$5,550, or a 11% return. This imple of considering all the costs, both the loss in purchasing power of the to inflation and the implicit cost of the return that could have been money was invested in the stock market.		
TRUE/FA	LSE. Write 'T' if the sta	atement is true and 'F' if the statement is false.		
120)	•	s 1 pair of cowboy boots his costs total \$300. When he produces 2 pairs costs are \$500. This means that Lonnie's marginal cost of producing the boots is \$200.		120)
	Answer: True Explanation:	False		
121)		sts per day increase from \$200 to \$400 by adding another worker, but it \$300, it is sensible to add that additional worker.	S	121)
	Answer: True Explanation:	False		
122)	The principle of volunt makes both people bett	ary exchange is the concept that a voluntary exchange between two peter off.	ople	122)
	Answer: True Explanation:	False		

123)	What matters to people	e is the face value of money or income.	123)
	Answer: True © Explanation:	False	
124)	The notion of opportur	nity cost allows the measurement of tradeoffs.	124)
	Answer: True Explanation:	False	
125)	When applying the ma benefit equals its marg	rginal principle, you should pick the level at which the activity's marginal inal cost.	125)
	Answer: True Explanation:	False	
126)	•	elor's degree, Timothy gave up an offer for a full time job as a bartender. urred an opportunity cost.	126)
	Answer: True Explanation:	False	
127)	Basically, the marginal doing something is wo	principle teaches us to evaluate the factors involved in taking an action or if rth the effort.	127)
	Answer: True Explanation:	False	
128)	The opportunity cost o	f going to a particular college is not the same for everyone.	128)
	Answer: True Explanation:	False	
129)	Tradeoffs involve an exused in different ways.	schange of one thing for another because resources are limited and can be	129)
	Answer: True Explanation:	False	
130)		nd your employer compensates you for your time with money, resulting in er off, it is an example of a voluntary exchange.	130)
	Answer: True Explanation:	False	
131)	The cost of a bachelor's	degree in philosophy equals the tuition plus the cost of room and board.	131)
	Answer: True © Explanation:	False	
132)	Economists argue that	individuals should continue to consume until total benefit equals total cost.	132)
	Answer: True © Explanation:	False	
133)	A "market" is an arrang	gement that allows people to exchange things.	133)
	Answer: True Explanation:	False	

134)	Opportunity cost i	is the difference between the nominal and real cost of some action.	134)
	Answer: True Explanation:	False	
135)	When product pridecreases.	ces increase slower than nominal wages increase, the real value of wages	135)
	Answer: True Explanation:	False	
136)) The opportunity cost of something is the nominal price paid for the product.		136)
	Answer: True Explanation:	False	
137)	According to the p	orinciple of diminishing returns, an additional worker decreases total output.	137)
	Answer: True Explanation:	False	
138)	When applying th benefit is less than	e marginal principle, you should pick the level at which the activity's marginal its marginal cost.	138)
	Answer: True Explanation:	False	
139)	A principle is a sel	If-evident truth that most people readily understand and accept.	139)
	Answer: True Explanation:	False	
140)	What matters to p	eople is the real value of money or income.	140)
	Answer: True Explanation:	False	
141)	If product prices of	decrease more than nominal wages decrease, the real value of wages will increase.	141)
	Answer: True Explanation:	False	
142)	The opportunity c	ost of something is the gain you receive as a result of your sacrifice.	142)
	Answer: True Explanation:	False	
143)) The government uses the buying power of wages rather than face value or nominal value in reporting changes in "real wages" in the economy.		
	Answer: True Explanation:	False	
144)	The government u	uses the buying power of wages in reporting changes in "nominal wages" in the	144)
	Answer: True Explanation:	False

Answer Key Testname: C2

- 101) B
- 102) D
- 103) The marginal monetary cost of eating more is zero, so people will eat until they would not enjoy eating other bite.

 There is an implicit cost of eating more once you are full (extra weight gain and physical discomfort). Therefore, people will eat until marginal benefit equals marginal cost, and this will occur at different amounts of food for different people.
- 104) It is likely that as you add workers, you will get incrementally less output out of each additional worker. Holding constant your materials, such as trucks, lawnmowers, etc., you'll almost surely be able to maintain more yards per day. But as you hire more workers, there might be waits for use of the tools, or for transportation to the next job. This is the prediction of the principle of diminishing returns.
- 105) A marginal benefit is the additional benefit resulting from a small increase in the production of a good.
- 106) No. The principle of diminishing marginal returns suggests that after some point of increasing returns, each incremental worker should have a progressively lower level of marginal productivity.
- 107) An opportunity cost is what you sacrifice to get something.
- 108) The real value would decrease.
- 109) The principle of diminishing returns shows that in the short run, beyond some point, output will increase at a decreasing rate. For example, producing more output in an existing production facility by increasing the number of workers sharing the facility will bring into effect the principle of diminishing returns, as output will eventually increase but at a decreasing rate.
- 110) The real-nominal principle explains that what matters to people is the real value of money or income -its purchasing power-and not the face value of money or income.
- 111) The firm would continue to stay open as long as the incremental, or marginal, benefit of staying open (say, the increased revenues) each extra hour exceeds (or at least equals) the incremental, or marginal, costs (e.g., electricity, wages, etc.) incurred from staying open that hour.
- 112) A quick answer would be to say that the cost is the tuition, room and board, and books expenditures that are borne during the college years. But such a statement would be incorrect. First, it understates one aspect of costs: one is giving up income while a student. But it also overstates the costs in another dimension: people would eat and sleep somewhere regardless of their attendance in college. So one should not consider room and board to be part of the cost of college attendance.
- 113) The opportunity cost of your \$10,000 is the money you lose because you cannot invest the money elsewhere.
- 114) Yes, though unlikely. This would imply that prices have fallen, and that the decrease is sufficiently negative to offset any losses in nominal wages.
- 115) A marginal cost is the additional cost resulting from a small increase in the production of a good.
- 116) Your money would have less buying power.
- 117) Everything has a cost, even when you do not pay money for it. Suppose that somebody bought you lunch. Resources from the economy were used to make that lunch, even though those resources may not belong to you. Consequently, the economy gave up anything else it could have made with the resources it used to make the lunch. The opportunity cost of that lunch is the lost opportunity to use those resources in some other way.
- 118) The mandated safety features decreased the marginal cost of speed: People who wear seat belts suffer less severe injuries in a collision, so every additional unit of speed is less costly to the driver. Drivers felt more secure because they were better insulated from harm in the event of a collision, and so they drove faster. As a result, the number of collisions between cars and bicycles increased, meaning that safer environment for drivers led to a more hazardous environment for bicyclists.
- 119) The opportunity cost of that money was not just the six percent inflation, but also the real rate of return that would have been enjoyed had the money been put in the stock market. For you to have been indifferent between loaning your money versus keeping it, your friend should have reimbursed you by \$5,550, or a 11% return. This is another example of considering all the costs, both the loss in purchasing power of the money due to inflation and the implicit cost of the return that could have been earned if the money was invested in the stock market.
- 120) TRUE
- 121) TRUE
