- 48. Who are the only people the Persian kings did not defeat and conquer?
  - a. Chaldeans
  - b. Medians
  - c. Lydians
  - d. Scythians
  - e. All of these

ANS: D REF: p. 57

- 49. Why were the Persians better tolerated than the Assyrians?
  - a. They allowed religious freedom.
  - b. They did not have any taxes.
  - c. They did not require people to serve in the military.
  - d. They ruled by treaty rather than mandate.
  - e. None of these.

ANS: A REF: p. 55

- 50. Which of the following is a significant weakness of the Persian Empire?
  - a. Its lack of a uniform culture in a diverse population.
  - b. The autonomy granted to the satraps.
  - c. The demobilization of the enormous military of the Assyrians.
  - d. The lack of scientific development in the empire.
  - e. An unstable economy because of lack of artisanal development.

ANS: B REF: p. 55

#### **ESSAY**

51. Analyze why iron was so significant to this new age by examining how and where it was used.

### ANS:

Iron use was significantly different from the earlier use of bronze because it was cheaper to make and more readily available. It was also stronger and more durable than bronze. It could be used for weaponry, chariots, plows, and farming implements and therefore had broad-reaching benefits to military, agricultural, technological, and cultural applications. It inspired long-range trade and made farming easier in more arid and/or hard-soil areas. Thus, iron indirectly helped in the expansion of empires.

52. In addition to the religious aspects, what was unusual about the formation of civilization among the Hebrews?

## ANS:

In addition to adhering to one of the earliest known forms of monotheism, the significant characteristic of Hebrew society was that the Israelites managed to build a civilization without most of the characteristic elements of other civilizations. These characteristic elements included a sedentary population, cities, writing, organized infrastructure with law and government, social ordering, and divisions of labor. After the disruption of early Abrahamic civilization due to the capture, enslavement, and then reestablishment of Israelite civilization after the Exodus led by Moses, there was a brief period of city building and traditional civilization, but it was disrupted again by Assyrian capture and the subsequent Babylonian captivity. What makes the Hebrew peoples unique is the idea of a cultural identification with a place as bound by the terms of the Covenant.

53. What differences do you see between Bronze and Iron Age civilizations? Compare and contrast these civilizations.

#### ANS:

Students should recognize that Bronze Age civilizations emerged in river valleys and were more geographically dependent and fixed in locale. There were fewer empires and less production of trade goods. While empires could be found in the Bronze Age (such as the Sargonian), they were much more limited in expanse than those in the Iron Age. The use of iron promoted more trade and expansion into less desirable, but now usable areas that could be sustained without being in close proximity to river valleys. Emphasis on trade meant that people were more mobile and less limited to local resources. Specialization of production helped to delineate economic development.

54. Compare and contrast the differences and similarities between Mesopotamian and early Hebrew civilizations.

#### ANS:

Students should be able to list a number of similarities, starting with the carrying of Mesopotamian traditions by Abraham, as the patriarch of the Hebrew religion, following the formation of a monotheistic covenant. The similarities of Hammurabi's laws with many found in Hebrew Scripture can be explained with the example of "an eye for an eye." Conversely, while women had a number of civil and legal rights within Mesopotamian society, they had few within the patriarchal Hebrew society. Traditional stories about the flood exist in the Noah epic of Hebrew tradition, as well as the Gilgamesh epic in Mesopotamia. Descriptions of Mesopotamian zigurrats are in accord with the biblical descriptions of the Tower of Babel, itself a reference to Babylon.

55. Discuss the creation of a Hebrew civilization in the absence of traditional civilizing features and permanent settlements.

#### ANS:

Students should be able to analyze the fundamental characteristics of early civilizations, such as cities, civil government, laws, technology, organized military, economic growth, and so on, and discuss the absences of these characteristics in early Hebrew civilization. Early Hebrew civilization was pastoral and not sedentary, had no direct or stable leadership or permanent forms of government, and had no laws until after the Exodus with the delivery of the Ten Commandments by Moses. There was no written literature until approximately one thousand years after Abraham, meaning that there were no direct records from the Hebrew civilization. There were no permanent cities, economic emphasis was on self-sufficiency, and trade was not regulated. The Hebrews were taken into captivity in Egypt, according to biblical tradition, and thus they vacated the land they had previously been inhabiting. Thus, for approximately one thousand years, the Hebrew peoples did not meet the criteria for a civilization and yet retained a cultural identification based on the covenant with God and his promises.

56. How does the creation of coinage by the Lydian civilization represent a universal change to civilizations?

### ANS:

The creation of a coin system based on precious metals is fundamental to creating a systematic economy and promoting trade among regions. The change from using lumps of precious and semiprecious metals to coins, that is, lumps of uniform weight in gold and silver, represented a step forward in facilitating trade. While coins might be called different things in different regions, a uniform agreement among traders in civilizations of the Near East and the Mediterranean meant that goods and services would be valued at a common standard.

57. Compare the development of law among the Hebrew population with that of other Near Eastern civilizations.

#### ANS:

The two most comparable pieces of law one could evaluate by primary source would be the Ten Commandments and Hammurabi's Law Code, which contain similarities and differences. Both contain laws of retaliation and the specific similarity of "an eye for an eye" regarding personal injury is not accidental, theorized as a transfer of Akkadian culture to the pastoral tribes moving to the Levant. Women in both areas were treated with an inferior status relative to a patriarchal system, however, some rights were outlined in both cases. An interesting difference that could be cited by students is that of the Afterlife: While clearly defined in Sumerian and Egyptian religions, it is divided in Hebrew theology (Psalms versus Isaiah).

58. Compare the techniques of the Assyrians and the Persians in building and maintaining an empire.

#### ANS:

Students should be able to characterize the Assyrian Empire as evolving first and ultimately giving rise to the Persian Empire through its downfall. The Assyrian Empire was created from military necessity as a defense against the incursions of foreign peoples. Eventually, by gaining control over trade access to the Tigris River, the Assyrians were able to begin levying taxes and take advantage of the Iron Age in ways that no one else had done yet. They combined iron weaponry and cavalry with one of the largest standing armies in the Near East. In assimilation of the various territories under their domain, the Assyrians used terror and intimidation to suppress any potential rebellion, although rebellions continued to occur. Enslaved peoples were deported and reassigned to completely new and foreign territories, and they were kept in line through constant threats, torture, and graphic depictions of torture art. Eventually, resentment grew strong enough that subjugated populations rebelled, arising to form a united opposition in 612. Four component states emerged from the remnants of the Assyrian Empire, with the Chaldeans initially taking the lead in forming a basis of power. Soon, however, the Persians overcame the Medeans under the leadership of Cyrus the Great, who continued to expand his empire across Medes, Persia, Chaldea, and Lydia. Cambyses brought Egypt into the empire, and Darius the Great reigned over a very large and heterogeneous empire. However, both Cyrus and Darius ruled with a lighter hand, allowing some degree of autonomy to various provinces, allowing religious tolerance, and emphasizing growth of both culture and trade for a more positive assimilation and maintenance of the empire.

59. Analyze the three primary forms of religion found in the Iron Age, and explain their influence on their respective civilizations in terms of law, government, and culture.

ANS: Students should be able to designate polytheism, monotheism, and dualism as the primary forms of religion in this time period, and assign them to their respective geographic/cultural locales. Most early civilizations were polytheistic, and students should be able to distinguish that most early kings were not divine, but divinely endorsed. This distinction affected the social organization by providing a tight interconnection between the government and religious authorities, which the students should discuss. Laws deriving from a religious perspective tended to be more morally based, while laws derived from civil government tended to be more ethically or socially based. Students could point to any number of early civilizations that were polytheistic, including Assyrian, Phoenician, and Philistine. For monotheism, students should be able to explore the Abrahamic tradition, including the covenant between El (later YHWH) and his chosen people and their development of a cultural identification on the basis of religion rather than a geographic establishment with traditional infrastructural elements. The absence of a formal government for the first thousand years and the absence of a written law code until sometime in the first millennium (or any writing at all) separated the Hebrew people from traditional polytheistic communities. For dualism, students should be able to point to the official religion of the Persian Empire, Zoroastrianism, which argued for a polarity between good and evil, with specific gods for each. Because this religion was initially transmitted by a

prophet and won the endorsement of the king, it was different from the other two forms, in which law and government preexisted the development of the religion.

60. Explain the importance of the Phoenicians in the eastern Mediterranean and the Near East during the Iron Age.

## ANS:

Students should be able to identify the Phoenicians as responsible for three major influences in this time period: trade, alphabet, and maritime skills. In general, the Phoenicians were one of the earliest international civilizations, but they did not form a militarily bound empire. Instead, they formed links between diverse civilizations of the Near East and Mediterranean worlds by promoting these three aspects, and the resultant trickle-down effect on the respective civilizations gave them the tools to prosper. Particularly with regard to trade throughout the regions, the Phoenicians came to dominate the economic world, which in turn inspired others trading with them over long distances to adhere to certain standards, such as the coinage established by Lydians to facilitate trade. Also, because of pressures from the Assyrian Empire, the Phoenicians began to explore further to the west, casting an even wider net of interconnection among the Mediterranean civilizations.

61. Compare the role of women in Hebrew tradition, using Deborah, Esther and Judith as examples. What makes these perspectives unusual?

## ANS:

In an era in which women were traditionally subordinated under a patriarchal system and given limited rights, even within Hebrew society, these three garnered admiration as examples for defending their faith through direct action. In the case of Deborah and Judith, each led military expeditions against conquerors, with Judith assassinating Nebuchadnezzar's General Halofernes by plying him with drink and cutting off his head. Deborah, one of the earliest texts of the Hebrew scripture, was a prophetess ael, gh of
