Chapter 2

Thinking Like An Economist

TRUE/FALSE

1. Economists try to address their subject with a scientist's objectivity.

ANS: T DIF: 1 REF: 2-1

NAT: Analytic LOC: The study of economics and definitions of economics

TOP: Economists MSC: Definitional

Economists devise theories, collect data, and then analyze these data in an attempt to verify or refute their theories.

ANS: T DIF: 1 REF: 2-1

NAT: Analytic LOC: The study of economics and definitions of economics

TOP: Economists MSC: Definitional

3. The scientific method is the dispassionate development and testing of theories about how the world works.

ANS: T DIF: 1 REF: 2-1

NAT: Analytic LOC: The study of economics and definitions of economics

TOP: Scientific method MSC: Definitional

4. The scientific method can be applied to the study of economics.

ANS: T DIF: 2 REF: 2-1

NAT: Analytic LOC: The study of economics and definitions of economics

TOP: Scientific method MSC: Interpretive

5. While the scientific method is applicable to studying natural sciences, it is not applicable to studying a nation's economy.

ANS: F DIF: 2 REF: 2-1

NAT: Analytic LOC: The study of economics and definitions of economics

TOP: Scientific method MSC: Interpretive

6. For economists, conducting experiments is often difficult and sometimes impossible.

ANS: T DIF: 1 REF: 2-1

NAT: Analytic LOC: The study of economics and definitions of economics

TOP: Economists MSC: Definitional

7. Economists usually have to make do with whatever data the world happens to give them.

ANS: T DIF: 1 REF: 2-1

NAT: Analytic LOC: The study of economics and definitions of economics

TOP: Economists MSC: Definitional

8. It is difficult for economists to make observations and develop theories, but it is easy for economists to run experiments to generate data to test their theories.

ANS: F DIF: 2 REF: 2-1

NAT: Analytic LOC: The study of economics and definitions of economics

NAT. Analytic Loc. The study of economics and definitions of economic

TOP: Economists MSC: Interpretive

9. Since economists cannot use natural experiments offered by history, they must use carefully constructed laboratory experiments instead.

ANS: F DIF: 2 REF: 2-1

NAT: Analytic LOC: The study of economics and definitions of economics

TOP: Economists MSC: Interpretive

10. Historical episodes are not valuable to economists.

ANS: F DIF: 2 REF: 2-1

NAT: Analytic LOC: The study of economics and definitions of economics

TOP: Economists MSC: Interpretive

11.	Historical episode	es allow	economists to il	lustrate a	and evaluate economic theories of the present.
ANS: NAT: TOP:			1 The study of ec Definitional	REF: onomics	2-1 and definitions of economics
12.	Good assumption	s simpli	fy a problem wit	hout sub	estantially affecting the answer.

SHORT ANSWER

1. Using the outline below, draw a circular-flow diagram representing the interactions between households and firms in a simple economy. Explain briefly the various parts of the diagram.

This diagram should duplicate the essential characteristics of the diagram in the text, with an explanation of the meaning of each flow and each market. It is important that the student understands that the inner loop represents the flow of real goods and services and that the outer loop represents the corresponding flow of payments.

2. The prairie dog has always been considered a problem for American cattle ranchers. They dig holes that cattle and horses can step in, and they eat grass necessary for cattle. Recently, ranchers have discovered that there is a demand for prairie dogs as pets. In some areas, prairie dogs can sell for as high as \$150 each. Cattlemen are now fencing off prairie dog towns on their land so these towns will not be disturbed by their cattle.

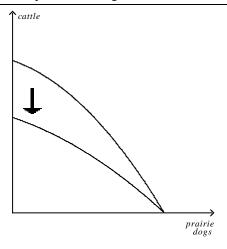

Draw a rancher's production possibilities frontier showing increasing opportunity cost of cattle production in terms of prairie dog production. Using a separate graph for each situation, show what would happen to the initial production possibilities frontier in each of the following situations:

- The outcome is efficient, with ranchers choosing to produce equal numbers of cattle and prairie dogs.
- b. As a protest against the government introducing the gray wolf back into the wild in their state, ranchers decide to withhold 25 percent of the available grassland for grazing.
- The price of prairie dogs increases to \$200 each, so ranchers decide to allot additional land for prairie dogs.
- The government grants new leases to ranchers, giving them 10,000 new acres of grassland each for grazing.
- A drought destroys most of the available grass for grazing of cattle, but not for prairie dogs since they also eat plant roots.

- 6. Use the following graph to answer the following questions.
 - a. How would point J be represented as an ordered pair?
 - b. What type of curve is this?
 - c. Does this curve show a positive or negative correlation between price and quantity?
 - d. Compute the slope of D_1 between points J and L.
 - e. What is the slope of D_1 between points L and N? Why would you not have to calculate this answer?
 - f. What is it called if we move from D_1 to D_2 ?
 - g. How do you know that the slope of D_2 is the same as the slope of D_1 ?

ANS:

- a. (20,24)
- b. a demand curve
- c. a negative correlation between price and quantity
- d. -8/20 or -2/5
- e. -2/5; because the slope of a straight line is constant
- f. an increase in demand.
- g. because the 2 lines are parallel

108 ❖ Chapter 2/Thinking Like An Economist 10. One way to characterize the difference between positive statements and normative statements is as follows: a. Positive statements tend to reflect optimism about the economy and its future, whereas normative statements tend to reflect pessimism about the economy and its future. Positive statements offer descriptions of the way things are, whereas normative statements offer opinions on how things ought to be. Positive statements involve advice on policy matters, whereas normative statements are supported by scientific theory and observation. d. Economists outside of government tend to make normative statements, whereas governmentemployed economists tend to make positive statements. ANS: B REF: 2-2 LOC: The study of economics and definitions of economics NAT: Analytic TOP: Positive statements | Normative statements MSC: Interpretive 11. - 20. When two variables have a negative correlation,
 - a. when the x-variable decreases, the y-variable decreases.
 - b. when the x-variable decreases, the y-variable increases.
 - c. when the x-variable increases, the y-variable increases.
 - d. More than one of the above is correct.

Chapter 2/Thinking Like An Economist ❖ 127

- 46. Bill has noticed that increases in unemployment insurance claims are associated with recessions, and therefore he advocates limits on unemployment insurance so as to prevent recessions. Martha has noticed that most drug addicts once attended schools, and therefore she advocates getting rid of schools so as to prevent drug addiction.
 - a. The reasoning of both Bill and Martha suffers from the omitted variable problem.
 - b. The reasoning of both Bill and Martha suffers from the reverse causality problem.
 - c. Bill's reasoning suffers from the reverse causality problem, and Martha's reasoning suffers from the omitted variable problem.
 - d. Martha's reasoning suffers from the reverse causality problem, and Bill's reasoning suffers from the omitted variable problem.

- 47. In the early 19th century, the Russian government sent doctors to southern Russian villages to provide assistance during a cholera epidemic. The villagers noticed that wherever doctors appeared, people died. Therefore, many doctors were chased away from villages, and some were even killed. This reaction to the correlation between doctors and deaths is most likely a problem of
 - a. omitted variables.
 - reverse causality.
 - c. government propaganda.
 - d. medical incompetence.
