

CHAPTER 1—The Mission and the Method

MULTIPLE CHOICE

1. In one of the first social psychological experiments ever conducted, researcher Norman Triplett examined the records of teams of cyclists. He found that cyclists who raced against each other ____ than those who raced alone (against the clock).
- were more aggressive after the race
 - got into more accidents
 - cycled more quickly
 - enjoyed the race less

ANS: C

DIF: Moderate

REF: A Brief History of Social Psychology

KEY: Bloom's: Remember OBJ: SOCP.BAUM.17.01.02: Name the early influences and key ideas that had a lasting influence on the field.

2. In one of the first social psychological experiments ever conducted, researcher Norman Triplett built a "competition machine," in which children wind up a fishing reel. He found that the children were able to wind more quickly when ____.
- they worked as a group side by side than when they worked alone
 - they worked alone than when they worked as a group side by side
 - they were explicitly asked to work as fast as possible
 - they were explicitly asked to take their time to "get it right"

ANS: A

DIF: Moderate

REF: A Brief History of Social Psychology

KEY: Bloom's: Remember OBJ: SOCP.BAUM.17.01.02: Name the early influences and key ideas that had a lasting influence on the field.

3. Based on early research by Norman Triplett, we should expect that children who work on math problems alone will ____ than children who work on math problems side by side with their classmates.
- work more slowly
 - work more quickly
 - second-guess themselves less
 - second-guess themselves more

ANS: A

DIF: Difficult

REF: A Brief History of Social Psychology

KEY: Bloom's: Apply OBJ: SOCP.BAUM.17.01.02: Name the early influences and key ideas that had a lasting influence on the field.

4. Based on early research by Norman Triplett with racing cyclists, we should expect that people who exercise on rowing machines at gyms are more likely to ____ than people who exercise on the same machines in the privacy of their homes.
- burn more calories
 - burn less calories
 - feel a sense of accomplishment
 - feel a sense of failure

ANS: A

DIF: Difficult

REF: A Brief History of Social Psychology

KEY: Bloom's: Apply OBJ: SOCP.BAUM.17.01.02: Name the early influences and key ideas that

Social Psychology & Human Nature, 4th Edition

had a lasting influence on the field.

5. In one of the first social psychological experiments ever conducted, researcher Max Ringelmann observed men as they pulled on a rope either alone, as part of a small group, or as part of a large group. He found that as the size of the group increased, ____.
- individual effort increased
 - individual effort decreased
 - the task took longer to complete
 - the task took less time to complete

ANS: B

DIF: Difficult

REF: A Brief History of Social Psychology

KEY: Bloom's: Apply OBJ: SOCP.BAUM.17.01.02: Name the early influences and key ideas that had a lasting influence on the field.

6. Suppose that you own a rowboat and enjoy going rowing on a nearby lake in the summer. In June, you are planning to go rowing with two of your friends (three people total in the boat), and in July, you are planning to go rowing with just one friend (two people total in the boat). Will you put in more effort (row harder) on the three-person trip or on the two-person trip?
- You will put in more effort on the three-person trip.
 - You will put in more effort on the two-person trip.
 - You will put in the same amount of effort on both trips.
 - It is impossible to say—no research has examined this question.

ANS: B

DIF: Difficult

REF: A Brief History of Social Psychology

KEY: Bloom's: Apply OBJ: SOCP.BAUM.17.01.02: Name the early influences and key ideas that had a lasting influence on the field.

7. Given Max Ringelmann's early research looking at group size and individual effort, should we expect Student X to put in a different amount of effort depending on whether she worked on a history project in a five-person group rather than a two-person group?
- Yes, we should expect her to work harder in the five-person group.
 - Yes, we should expect her to work harder in the two-person group.
 - No, we should expect her to work equally hard in both groups.
 - It is impossible to say; it appears group size effects depend on other variables.

ANS: B

DIF: Moderate

KEY: Bloom's: Apply OBJ: SOCP.BAUM.17.01.02: Name the early influences and key ideas that had a lasting influence on the field. NOTES: Modified

8. Early research in social psychology conducted by Max Ringelmann revealed that people ____ when they work as part of a group (e.g., pushing a car off of the road with two other people) compared to when they work alone at the same task.
- do not work as hard
 - work harder
 - feel like they are doing more work
 - feel like they are doing less work

ANS: A

DIF: Moderate

REF: A Brief History of Social Psychology

KEY: Bloom's: Understand OBJ: SOCP.BAUM.17.01.02: Name the early influences and key ideas that had a lasting influence on the field. NOTES: Modified

Chapter 1—The Mission and the Method

9. The first social psychological experiments and the publication of the first book to bear the title *Social Psychology* both occurred around ____.
- 400 A.D.
 - 1750
 - 1900
 - 1965

ANS: C

DIF: Moderate

REF: A Brief History of Social Psychology

KEY: Bloom's: Remember OBJ: SOCP.BAUM.17.01.02: Name the early influences and key ideas that had a lasting influence on the field.

10. During the first half of the 20th century, who argued that attitudes were the most important and useful concept in social psychology?
- Kurt Lewin
 - Max Ringelmann
 - Norman Triplett
 - Gordon Allport

ANS: D

DIF: Easy

REF: A Brief History of Social Psychology

KEY: Bloom's: Remember OBJ: SOCP.BAUM.17.01.02: Name the early influences and key ideas that had a lasting influence on the field.

11. Who proposed the idea that behavior is a function of both the person and the situation in the first half of the 20th century?
- Max Ringelmann
 - Norman Triplett
 - Kurt Lewin
 - Gordon Allport

ANS: C

DIF: Easy

REF: A Brief History of Social Psychology

KEY: Bloom's: Remember OBJ: SOCP.BAUM.17.01.02: Name the early influences and key ideas that had a lasting influence on the field.

12. You want to ask your friend Maya to help you with your sorority's float for the competition in the homecoming parade next week. Maya is extremely reliable and trustworthy, but she is totally swamped with her internship and upcoming midterm exams. You decide not to ask her since she might be too busy to follow through. According to Kurt Lewin's analysis of human behavior, knowing that Maya is reliable is an example of "____" information, and knowing she is busy is an example of "____" information.
- person; situation
 - situation; person
 - social; nonsocial
 - nonsocial; social

ANS: A

DIF: Moderate

REF: A Brief History of Social Psychology

KEY: Bloom's: Apply OBJ: SOCP.BAUM.17.01.02: Name the early influences and key ideas that had a lasting influence on the field.

13. In the history of psychology and social psychology, the late 1800s and early 1900s marked ____.
- the very first social psychological experiments
 - social psychology's independence from behaviorism
 - the beginnings of research in social cognition

Social Psychology & Human Nature, 4th Edition

d. the beginnings of research in social neuroscience

ANS: A DIF: Difficult REF: A Brief History of Social Psychology
KEY: Bloom's: Remember OBJ: SOCP.BAUM.17.01.02: Name the early influences and key ideas that had a lasting influence on the field. NOTES: Modified

14. When did social psychology begin to come into its own as a field?
- The 1910s and 1920s
 - The 1930s and 1940s
 - The 1950s and 1960s
 - The 1970s and 1980s

ANS: C DIF: Difficult REF: A Brief History of Social Psychology
KEY: Bloom's: Remember OBJ: SOCP.BAUM.17.01.02: Name the early influences and key ideas that had a lasting influence on the field. NOTES: Modified

15. Milgram's famous studies of obedience to authority were motivated by which historical event?
- The Holocaust
 - The fall of Communism
 - The return of soldiers from Desert Storm
 - The Great Depression

ANS: A DIF: Easy REF: A Brief History of Social Psychology
KEY: Bloom's: Remember OBJ: SOCP.BAUM.17.01.02: Name the early influences and key ideas that had a lasting influence on the field.

16. Today, both funded and unfunded studies conducted at universities must first obtain ____ approval.
- ABPP
 - IRB
 - APA
 - ERB

ANS: B DIF: Easy
REF: How Do Social Psychologists Answer Their Own Questions? KEY: Bloom's: Remember
OBJ: SOCP.BAUM.17.01.07: Analyze the ethical issues associated with psychological research in general and social psychological research in particular.

17. Which of the following elements is particularly critical to include in a deception study, but is not usually required in other types of studies?
- IRB approval
 - demand characteristics
 - complete debriefing
 - informed consent

ANS: C DIF: Difficult
REF: How Do Social Psychologists Answer Their Own Questions? KEY: Bloom's: Understand
OBJ: SOCP.BAUM.17.01.07: Analyze the ethical issues associated with psychological research in general and social psychological research in particular.

18. Dr. Puni does not want the participants in his study to be aware of his hypothesis. What will he strive to reduce in his study?
- margin of error

Chapter 1—The Mission and the Method

- b. divergent validity
- c. measurement validity
- d. demand characteristics

ANS: D DIF: Difficult

OBJ: SOCP.BAUM.17.01.05: Describe the components and steps of the scientific method.

19. In the 1950s and 1960s, mainstream psychology was divided between two main theoretical camps: ____.
- a. trait theory and behaviorism
 - b. Freudian psychoanalysis and humanism
 - c. humanism and trait theory
 - d. behaviorism and Freudian psychoanalysis

ANS: D DIF: Moderate REF: A Brief History of Social Psychology

KEY: Bloom's: Understand

OBJ: SOCP.BAUM.17.01.02: Name the early influences and key ideas that had a lasting influence on the field.

20. The influence of Freudian psychoanalysis on psychology is most readily seen in ____.
- a. the identification of neurological correlates
 - b. detailed studies of genotypes and phenotypes
 - c. elaborate interpretation of individual experiences
 - d. the systematic search for reinforcement contingencies

ANS: C DIF: Moderate REF: A Brief History of Social Psychology

KEY: Bloom's: Understand

OBJ: SOCP.BAUM.17.01.02: Name the early influences and key ideas that had a lasting influence on the field. NOTES: New

21. Behaviorism seeks to explain human behavior in terms of ____.
- a. basic biological drives such as hunger and thirst
 - b. broad environmental influences such as historical time period
 - c. the natural tensions between biological drives and society
 - d. learning principles such as rewards and punishments

ANS: D DIF: Easy REF: A Brief History of Social Psychology

KEY: Bloom's: Understand

OBJ: SOCP.BAUM.17.01.02: Name the early influences and key ideas that had a lasting influence on the field.

22. How are social psychologists generally similar to behaviorists?
- a. They both tend to favor experiments and the scientific method.
 - b. They are both interested in the mind, thoughts, and emotions.
 - c. They are both originally rooted in psychoanalytic theory.
 - d. They are both interested in the unconscious mind.

ANS: A DIF: Moderate REF: A Brief History of Social Psychology

KEY: Bloom's: Understand

OBJ: SOCP.BAUM.17.01.02: Name the early influences and key ideas that had a lasting influence on the field.

23. Social psychologists are generally similar to Freudian psychoanalysts in that they both ____.
- a. are more interested in abnormal behavior than in normal behavior
 - b. tend to favor experiments and the scientific method
 - c. are primarily interested in external behaviors rather than the mind
 - d. have an interest in thoughts and feelings as well as behaviors

Social Psychology & Human Nature, 4th Edition

ANS: D DIF: Moderate REF: A Brief History of Social Psychology
KEY: Bloom's: Understand OBJ: SOCP.BAUM.17.01.02: Name the early influences and key ideas that had a lasting influence on the field.

24. While social psychologists are interested in a wide variety of topics, three themes that have become increasingly important during the last 30 years are ____.
- psychoanalysis, meditation, and hypnosis
 - economic behavior, political behavior, and criminal behavior
 - social cognition, biological influences on behavior, and the self
 - personality measurement, organizational behavior, and spirituality

ANS: C DIF: Moderate REF: A Brief History of Social Psychology KEY: Bloom's: Remember OBJ: SOCP.BAUM.17.01.01: Define social psychology.

25. Which topic has been of the MOST interest to social psychologists during the last 30 years?
- Social cognition—concerned with how people think about other people and how people think about the social world in general
 - Behaviorism—concerned with basic principles of learning such as reward and punishment
 - The idea that modern life makes people vulnerable to alienation and exploitation
 - The idea that people act less on the basis of firm moral principles than they do on the basis of conformity, or "following the crowd"

ANS: A DIF: Difficult REF: A Brief History of Social Psychology
KEY: Bloom's: Understand OBJ: SOCP.BAUM.17.01.01: Define social psychology.

26. Following the collapse of the Soviet empire in 1989, social psychology's focus on conflict ____.
- remained unchanged
 - emphasized racial/ethnic conflict
 - lessened
 - increased

ANS: B DIF: Moderate REF: A Brief History of Social Psychology
KEY: Bloom's: Understand OBJ: SOCP.BAUM.17.01.01: Define social psychology.

27. Social psychology is best defined as the study of ____.
- how we learn to behave in accordance with the rules of society
 - how our thoughts, feelings, and behaviors are affected by other people
 - how cultures are created in order to serve the interests of the powerful
 - how societies work to allocate resources and responsibilities

ANS: B DIF: Moderate REF: What Do Social Psychologists Do?
MSC: KEY: Bloom's: Understand OBJ: SOCP.BAUM.17.01.01: Define social psychology.
NOTES: Modified

28. As a rule, social psychologists are MOST interested in ____.
- normal adult human beings
 - severe mental illness
 - normal childhood development
 - diagnoses in abnormal behavior

ANS: A DIF: Easy REF: What Do Social Psychologists Do?
KEY: Bloom's: Understand OBJ: SOCP.BAUM.17.01.01: Define social psychology.

Chapter 1—The Mission and the Method

29. In social psychology, the "ABC triad" consists of ____.

- a. attitudes, beliefs and commitments
- b. ambiances, biology, and culture
- c. affects, behaviors and cognitions
- d. attributions, boundaries, and corrections

ANS: C

DIF: Moderate

KEY: Bloom's: Remember OBJ: SOCP.BAUM.17.01.04: Explain how social psychology relates to other fields of study. NOTES: Modified

56. How has the textbook described the historical relationship between clinical psychology and social psychology?
- a. Clinical psychology grew out of social psychology.
 - b. Both clinical psychology and social psychology grew out of cognitive psychology.
 - c. The two fields have historically been at odds and argued with one another.
 - d. The two fields have historically exchanged ideas and viewpoints.

ANS: D DIF: Difficult REF: Social Psychology's Place in the World
KEY: Bloom's: Remember OBJ: SOCP.BAUM.17.01.04: Explain how social psychology relates to other fields of study.

57. Within psychology, ____ typically focus on "abnormal" behavior (e.g., mental disorders and behavioral disorders).
- a. only clinical psychologists
 - b. both clinical psychologists and personality psychologists
 - c. only personality psychologists
 - d. psychologists from all branches of psychology

ANS: A DIF: Moderate REF: Social Psychology's Place in the World
KEY: Bloom's: Understand OBJ: SOCP.BAUM.17.01.04: Explain how social psychology relates to other fields of study.

Chapter 1—The Mission and the Method

58. Dr. Kay researches the effectiveness of different therapies for treating severe anxiety disorders. He is MOST likely a ____.
- personality psychologist
 - clinical psychologist
 - cognitive psychologist
 - Freudian psychoanalyst

ANS: B DIF: Moderate REF: Social Psychology's Place in the World
KEY: Bloom's: Apply OBJ: SOCP.BAUM.17.01.04: Explain how social psychology relates to other fields of study.

59. Which branch of psychology is primarily concerned with thought processes (e.g., how memory works and what people notice)?
- developmental psychology
 - social psychology
 - cognitive psychology
 - biological psychology

ANS: C DIF: Easy REF: Social Psychology's Place in the World
KEY: Bloom's: Understand OBJ: SOCP.BAUM.17.01.04: Explain how social psychology relates to other fields of study.

60. In recent years, what has emerged as an important subfield of social psychology that explores the ways in which people think about social situations?
- cognitive sociology
 - social cognition
 - cognitive psychology
 - socioneurology

ANS: B DIF: Difficult REF: Social Psychology's Place in the World
KEY: Bloom's: Remember OBJ: SOCP.BAUM.17.01.04: Explain how social psychology relates to other fields of study.

61. Which of the following topics would a cognitive psychologist be MOST likely to study?
- The heritability of depression
 - Male-female differences in sexual behavior
 - How people learn to memorize complex musical compositions
 - Altruistic behavior among chimpanzees

ANS: C DIF: Easy REF: Social Psychology's Place in the World
KEY: Bloom's: Understand OBJ: SOCP.BAUM.17.01.04: Explain how social psychology relates to other fields of study.

62. Which of the following topics is a personality psychologist MOST likely to study?
- The development of schizophrenia
 - Gender differences in the acquisition of language skills
 - Individual differences in leadership ability
 - Cross-cultural differences in mating and courtship behaviors

ANS: C DIF: Moderate REF: Social Psychology's Place in the World
KEY: Bloom's: Apply OBJ: SOCP.BAUM.17.01.04: Explain how social psychology relates to

Social Psychology & Human Nature, 4th Edition

other fields of study.

63. Until recently, what was the relationship between developmental and social psychology?
- The two subfields mutually influenced each other.
 - Developmental psychology tended to draw more on social psychology.
 - Social psychology tended to draw more on developmental psychology.
 - The two fields had relatively little influence on each other.

ANS: B DIF: Difficult REF: Social Psychology's Place in the World

Chapter 1—The Mission and the Method

119. Suppose that a cereal manufacturer tried out a new cereal box design for a few months, and—during the same time period—notices that its sales have tripled. One of the cereal executives, Mr. Correl, boasts that the new cereal box must have sparked the increase in sales. But another executive, Mr. Scien, points out that the increase could be due to the new advertising campaign that the company is using, or to new distribution practices that have taken hold, or to the fact that more and more people are eating cereal these days. That is, Mr. Scien suggests that the company's "test" of the new cereal box design is low in ____.
- operationalizing
 - generalizability
 - internal validity
 - external validity

Chapter 1—The Mission and the Method

ESSAY

1. During the era in which social psychology was emerging as a discipline, it was caught between two opposing camps: behaviorism and Freudian psychoanalysis. Explain how social psychology did not fit neatly into either of those camps, and how it ultimately integrated features from both as it emerged as an independent field.

ANS:

- a. Behaviorism sought to explain all human behavior in terms of learning principles and reinforcement contingencies (i.e., rewards and punishments). Behaviorists were opposed to talking about inner processes such as thoughts and feelings as they felt such processes were unobservable and thus “unscientific.” They preferred to study human behavior using observation and the scientific method. Social psychology, however, was interested in how thoughts and feelings influenced, and were influenced by, social context.
- b. Freudian psychoanalysis sought to generate elaborate interpretations of individuals’ subjective experiences. In contrast to behaviorists, psychoanalysts were very interested in examining inner processes. However, scholars from this camp rarely engaged in scientific study of these processes; rather, they relied on case analyses from clinical patients. Social psychology appreciated the emphasis on inner processes, but was not aligned to the more subjective methodologies the Freudian psychoanalysts tended towards.
- c. As social psychology came into its own in the 1970s, it was able to integrate the Freudian interest in inner processes with the behaviorist commitment to the scientific method. Social psychologists found ways to study thoughts, feelings and behaviors using the scientific method rather than case studies.

DIF: Moderate REF: A Brief History of Social Psychology KEY: Bloom’s: Understand
OBJ: SOCP.BAUM.17.01.02: Name the early influences and key ideas that had a lasting influence on the field.

2. Describe the ABC triad and give examples of each component with respect to the experience of falling in love.

ANS:

- a. Affect: The A in the triad stands for affect. Affect refers to feelings or emotional experiences. For example, when a person falls in love, they have the overwhelming emotional experience of passion for another person.
- b. Behavior: The B in the triad stands for behavior. Behavior refers to actions that people do. For example, when a person falls in love, they alter their schedule to spend more time with their beloved or find themselves talking on the phone more frequently than they do when they are not in such an intense relationship.
- c. Cognition: The C in the triad stands for cognition. Cognition refers to thoughts or beliefs. For example, when a person falls in love, they find themselves thinking of the object of their affection constantly.

OBJ: SOCP.BAUM.17.01.03: Describe the ABC triad of social psychology.

Social Psychology & Human Nature, 4th Edition

3. Compare and contrast social psychology with two other branches of psychology (e.g., cognitive psychology, personality psychology).

ANS:

- a. Biological psychology: The study of what happens in the brain, nervous system, and other aspects of the body; increasingly overlapping with social psychology.
- b. Clinical psychology: The study of behavior disorders and other forms of mental illness, and how to treat them; has a long history of fruitful exchange with social psychology.
- c. Cognitive psychology: The study of thought processes, such as how memory works and what people notice; linked with social psychology via research in social cognition.
- d. Developmental psychology: The study of how people change across their lives, from conception and birth through old age and death; relevant to social psychology but an area with little overlap historically.
- e. Personality psychology: The study of important individual differences; very intertwined with social psychology.

DIF: Easy REF: Social Psychology's Place in the World KEY: Bloom's: Understand
OBJ: SOCP.BAUM.17.01.04: Explain how social psychology relates to other fields of study.

4. Compare and contrast social psychology with two related fields outside of psychology (e.g., sociology, anthropology).

ANS:

- a. Anthropology: The study of human culture—the shared values, beliefs, and practices of a group of people.
- b. Economics: The study of the production, distribution, and consumption of goods and services, and the study of money.
- c. History: The study of past events.
- d. Political science: The study of political organizations and institutions, especially governments.
- e. Sociology: The study of human societies and groups that form those societies; differs from social psychology in that sociologists focus on groups while social psychologists focus on individuals within groups.

DIF: Easy REF: Social Psychology's Place in the World KEY: Bloom's: Understand
OBJ: SOCP.BAUM.17.01.04: Explain how social psychology relates to other fields of study.

5. Explain the difference between applied and basic research.

ANS:

- a. Applied research is focused on a particular, substantive problem found in the real world. For example, a scientist may be very interested in reducing discrimination in urban housing. Basic research, in contrast, focuses more on identifying principles of behavior that will generalize across contexts of study. For example, a scientist may be interested in understanding the cognitive processes that underlie stereotyping, prejudice, and ultimately discrimination without focusing on a particular setting (like urban housing) in which these processes take place.

DIF: Difficult REF: Why People Study Social Psychology KEY: Bloom's: Understand
OBJ: SOCP.BAUM.17.01.05: Describe the components and steps of the scientific method.

Chapter 1—The Mission and the Method

6. Outline the scientific method, describing each of the different steps involved.

ANS:

- a. State a problem for study.
- b. Define a hypothesis.
- c. Design a research study and collect data.
- d. Conduct statistical analyses of data.
- e. Communicate study results (write up a journal article and submit it for publication).

DIF: Moderate REF: How Do Social Psychologists Answer Their Own Questions?

KEY: Bloom's: Remember OBJ: SOCP.BAUM.17.01.05: Describe the components and steps of the scientific method.

7. Compare and contrast the experimental method with the correlational method. How do these two approaches differ, and what are the advantages and disadvantages of each?

ANS:

- a. Experimental method: Involves manipulation of at least one independent variable and measurement of at least one dependent variable. The two defining features are random assignment (to conditions, or levels, of an independent variable) and control (over the independent variable). Experiments are typically preferred to other studies within social psychology because they allow the researcher to draw causal conclusions with a relatively high degree of confidence (i.e., they are high in internal validity). They are sometimes not feasible for practical or ethical reasons, however, and they are often low in external validity and mundane realism.
- b. Correlational method: Involves measuring the relationship between two or more variables, without manipulation and without random assignment. Correlational studies are relatively low in internal validity (compared to experiments) but they are often a researcher's only option (e.g., when variables cannot be manipulated for logistic or ethical reasons). Correlational studies are also often relatively high in external validity and mundane realism.

DIF: Difficult REF: How Do Social Psychologists Answer Their Own Questions?

KEY: Bloom's: Understand OBJ: SOCP.BAUM.17.01.06: Assess the different methods of data collection in social psychology.

8. Explain the difference between reliability and validity.

ANS:

- a. Reliability is focused on consistency in measurement. Consistency can be measured in several ways. With test-retest reliability, the consistency is temporal in nature. A psychologist measures a characteristic at one time, and then measures it at a later time to see if the measure is stable across times. Alternately, consistency can be measured as "internal consistency" of a measure. If a measure has multiple items on it, all of them purporting to measure the same thing, the items should be highly inter-correlated. Validity, however, focuses more on the degree to which a survey scale measures what it claims to measure. For example, face validity is the degree to which a scale appears on the face of it to measure what it says it measures. Of course, this is not alone sufficient to establish validity. Convergent validity speaks to a measure correlating with other, related measures, while divergent validity speaks to a measure failing to correlate with unrelated measures. Measurement validity deals with whether or not a measure is predictive of outcomes it should be able to predict. An instrument cannot be valid unless it first is reliable. If a measure is inconsistent (either temporally or internally) then we cannot know for certain what exactly is being measured.

KEY: Bloom's: Understand

OBJ: SOCP.BAUM.17.01.06: Assess the different

methods of data collection in social psychology.

9. According to the textbook, is most social psychological research high in external validity? Why or why not? How big of a problem is cultural relativity for social psychology as a field, and what steps are researchers taking to address it?

ANS:

- a. Most research in social psychology is experimental in nature, and conducted on college students in the U.S. or western Europe, such that it is often vulnerable to low external validity. While the college student samples used in research do not appear to pose a major problem—at least for most areas within social psychology—there is reason to believe that research findings may not always generalize to different cultures and/or time periods (i.e., that cultural relativity is an issue in social psychology). That being said, not enough cross-cultural research has been done to know the extent of this problem. However, because science is self-correcting—the fact that research slowly and systematically builds off of past research, and the fact that the peer review process is in place at most major journals, help to ensure that errors in past research will be brought to light—any cultural biases/limitations in social psychological research should, over time, be corrected. Social psychologists have become increasingly aware that their research could be culturally biased, and they are more and more often seeking to replicate their research cross-culturally (and with diverse samples/methods within cultures), as well as to conduct more research on the role of culture and cross-cultural differences themselves.

DIF: Difficult REF: How Much of Social Psychology Is True? KEY: Bloom's: Understand

OBJ: SOCP.BAUM.17.01.06: Assess the different methods of data collection in social psychology.

10. Explain the self-correcting nature of science.

ANS:

- a. Often in social psychology, two opposing sides of a position can point to experimental data that seems to support conflicting perspectives. Furthermore, some data may be flawed, leading to erroneous conclusions. Because science is an iterative process, each new study builds on previously published ones, correcting design flaws and erroneous conclusions along the way. Additionally, when new researchers replicate old studies, they are able to establish if the results are repeatable. If they are, we can have all the more confidence in them. If they are not replicated, then we may have to question if the results from the original study were a statistical fluke, and more research will be required. Over time, as researchers correct flaws and replicate previous studies, science can approximate the truth more and more closely.
