

Chapter 2. Tabular and Graphical Methods Solutions

1.

a.

Rating	Frequency	Relative Frequency
5	12	$12/36 = 0.333$
4	9	$9/36 = 0.250$
3	7	$7/36 = 0.194$
2	5	$5/36 = 0.139$
1	3	$3/36 = 0.083$
Total	36	≈ 1.000

- b. More than a third of the patrons are very satisfied with the entrees. Overall more than half of the customers gave a top rating of either 4 or 5. Only 8.3% gave the lowest rating.

2.

a.

Rating	Frequency	Relative Frequency
Excellent	5	$5/24 = 0.208$
Good	12	$12/24 = 0.500$
Fair	4	$4/24 = 0.167$
Poor	3	$3/24 = 0.125$
Total	24	1.000

- b. The most common response is Good which comprises 50% of total responses. More than 70% of the patients reveal that they are in good or excellent health conditions.

3.

a.

Expectation	Frequency	Relative Frequency
Better	5	$5/25 = 0.20$
Same	16	$16/25 = 0.64$
Worse	4	$4/25 = 0.16$

Total	25	1.00
-------	----	------

Most of the chief executives (64%) believed that the economy would be the same in the next 12 months.

b.

4.

a.

Delays	Frequency	Relative Frequency
PM Delays	1	$1/18 = 0.056$
All Day Delays	6	$6/18 = 0.333$
AM Delays	4	$4/18 = 0.222$
None	7	$7/18 = 0.389$

Total	18	1.000
-------	----	-------

The most common type of delays was 'None', comprising 38.9% of all types. The second most common type was 'All Day Delays', comprising 33.3%.

b.

5.

- a. 22 (18 + 4) out of 50 rookies received a rating of 4 or better; 14 (10 + 4) out of 50 rookies received a rating of 2 or worse.

b.

Rating	Relative Frequency
1	$4/50 = 0.08$
2	$10/50 = 0.20$
3	$14/50 = 0.28$
4	$18/50 = 0.36$
5	$4/50 = 0.08$
Total	1.00

8% of the rookies received a rating of 5.

c.

6.

a.

Response	Frequency
Good Jobs	$0.37 \times 5,324 = 1,970$
Affordable homes	$0.15 \times 5,324 = 799$
Top schools	$0.11 \times 5,324 = 586$
Low crimes	$0.23 \times 5,324 = 1,225$
Things to do	$0.14 \times 5,324 = 745$
Total	5,324

1225 respondents considered 'Low crimes' as the most important criterion.

b.

7.

a.

Top Vacation Choice	Relative Frequency
Cruises	$140/316 = 0.443$
Beaches	$68/316 = 0.215$
Amusement Parks	$68/316 = 0.215$
Big Cities	$20/316 = 0.063$
Lakes	$12/316 = 0.038$
Summer Camp	$8/316 = 0.025$
Total	≈ 1.000

44.3% of the children cited 'Cruises' as the perfect summer trip.

b.

8.

a.

Car-Rental Company	Relative Frequency (Market Share)
Enterprise	$10.7/21.9 = 0.489$
Hertz	$4.7/21.9 = 0.215$
Avis Budget	$4/21.9 = 0.183$
Dollar Thrifty	$1.5/21.9 = 0.068$
Other	$1/21.9 = 0.046$
Total	1.000

b. Hertz accounted for 21.5% of sales.

c.

9.

a.

- b. $(0.4 * 829) = 332$ respondents believe that a cure for cancer will be found.

10.

- a. The number of responses for “Others” is the difference between the total number of responses and the sum of responses in the table. That is, $20,825 - 15,241 = 5,584$.
- b. The proportion of respondents that felt that the Green Bay Packers would win Super Bowl XLV is $1,076/20,825 = 0.052$.

c.

Team	Relative Frequency
Falcons	$4,040/20,825 = 0.194$
Saints	$1,880/20,825 = 0.090$
Texans	$1,791/20,825 = 0.086$

Cowboys	$1,631/20,825 = 0.078$
Vikings	$1,438/20,825 = 0.069$
Colts	$1,149/20,825 = 0.055$
Steelers	$1,141/20,825 = 0.055$
Patriots	$1,095/20,825 = 0.053$
Packers	$1,076/20,825 = 0.052$
Others	$5,584/20,825 = 0.268$
Total	1.000

11.

- Since 60% favored Obama and 30% favored Romney in terms of likeability, then 10% favored neither Obama nor Romney.
- Of the 500 respondents, 300 ($=500 \times 0.60$) favored Obama and 150 ($=500 \times 0.30$) favored Romney. So Obama was favored by 150 more respondents.

12.

- According to this survey, an athlete in football was most likely to sustain an injury with lifelong consequences. An athlete in martial arts was least likely to sustain an injury with lifelong consequences.
- Approximately 79 respondents ($=992 \times 0.08$) believed that professional hockey players were most likely to sustain an injury with lifelong consequences.

13. This graph does not correctly depict what has happened to Caterpillar's stock price over this period. The graph has been given a relatively high value of \$500 on the vertical axis. This compresses the data so that the increase of the stock price is not as apparent as it should be.
14. This graph does not correctly depict what has happened to sales over the most recent five-year period. The vertical axis has been stretched so that the increase in sales appears more pronounced than warranted.

c. Two funds had assets of at least 100 but less than 130 (in \$ billions); 19 funds had assets less than \$160 billion.

d. 40% of the funds had assets of at least \$70 but less than \$100 (in billions); 95% of the funds had assets less than \$130 billion.

e.

The distribution is positively skewed.

Note: The histogram could have also been made with relative frequencies. It would have had the same positive skewness.

	Total = 2000		

- b. 28% of the women were at least 25 but less than 30 years old; 87% were less than 35 years old.

c.

The distribution appears to be relatively symmetric with possibly a slight positive skew.

d.

If we draw a horizontal line that corresponds to the 0.5 value on the vertical axis, it will intersect the ogive at the age of approximately 28 years old.

27.

c.

The histogram shows a positively skewed data set reflecting the relatively young age of the nightclub's guests.

28.

- a. No. The distribution is not symmetric. It is positively skewed.
- b. Forty-four percent of the states had median household income between \$45,000 and \$55,000.
- c. Sixty-six percent of the states had median household income between \$35,000 and \$55,000.

29.

- a. Draw a vertical line through Income of 50. It intercepts with the ogive at the point of about 0.4. Thus, about 40% of the states had median household income less than \$50,000.
- b. Draw a vertical line through Income of 60. It intercepts with the ogive at the point of about 0.80. Thus, about 80% of the states had median household income less than \$60,000. It is equivalent that about 20% of the states had median household of more than \$60,000.

30.

- a. No. The distribution is not symmetric. It is positively skewed.
- b. The minimum monthly stock price is approximately \$50 and the maximum stock price is approximately \$450.
- c. The \$50 - \$150 class has the highest relative frequency, which is about 0.35.

31.

- a. No. The distribution is not symmetric. It is positively skewed.
- b. Three (0.10×30) NBA players earned between \$20,000,000 and \$24,000,000.
- c. About 26 ($0.43 \times 30 + 0.43 \times 30 = 25.8$) NBA players earned between \$12,000,000 and \$20,000,000.

32.

- a. Draw a vertical line through Salary of 18. It intercepts with the ogive at the point of about 0.70. Thus, about 70% of the salaries were less than \$18,000,000.
- b. Draw a vertical line through Salary of 14. It intercepts the ogive at the point of about 0.15. Thus, about 15% of the salaries were less than \$14,000,000. It is equivalent that about 85% of the salaries were more than \$14,000,000.

- b. No. The distribution is not symmetric. It is positively skewed.
- c. The class “\$3.7 up to \$3.9” has the highest frequency.
- d.

Draw a vertical line through Price of 3.90. It intercepts the ogive at the point of about 30. Thus, about thirty states had average gas prices of \$3.90 or less, which is about 60% of the states. Consequently, about 40% of the states had average gas prices greater than \$3.90.

13,000 up to 13,250	14
13,250 up to 13,500	1
	Total = 62

The DJIA was less than 12,500 on 10 days during this quarter.

b.

The distribution is not symmetric. It is positively skewed.

c.

Draw a vertical line through Index of 13,000. It intercepts the ogive at the point of about 0.80. Thus, approximately 80% of the days the DJIA was less than 13,000.

Spain has a relatively younger team compared to Netherlands. Spain's ages range from 21 to 32, while Netherlands' ages range from 22 to 39. The majority of players in both teams are in their 20s. However, Netherlands has a couple of more players in their 30s than Spain.

43.

There is a negative linear relationship between x and y . As x increases, y tends to decrease.

44.

There is no evident relationship between x and y .

45.

There is a negative relationship between x and y . As x increases, y tends to decrease.

46.

There is a positive relationship between number of hours spent studying and grades. As the number of hours spent studying increases, grades tend to increase.

47.

The results support the finding. As a mother's weight gain increases, the newborn's birth weight tends to increase well.

48.

There is a slightly negative relationship between the two assets. Therefore, it would be wise for the investor to include them in her portfolio.

49.

There is a positive relationship. The realtor can conclude that generally, with higher home prices, the number of days to sell the home will tend to be higher as well.

The sample responses show the difference regarding smoking behavior in the two states. Notice that 45% of the households in Kentucky allow smoking at home whereas only 10% do so in Utah.

b.

The bar chart shows that smoking at home is much more common in Kentucky than in Utah.

51.

Horrible	13	$13/28 = 0.464$
	Total = 28	Total = 1

From the relative frequency distribution, we can conclude that the majority of the evaluations were either "OK" or "Horrible". Notice that none of the responses included "Outstanding". Therefore, it is necessary for the owner of the restaurant to improve the service and/or experience provided.

b.

The pie chart which depicts categorical data in percentage values demonstrates the poor evaluations received.

The bar chart is another way to depict categorical data effectively. We notice that the highest bar corresponds to the last category "Horrible", and that there are no responses given for "Outstanding."

52.

a.

The charts reveal parent preferences. Sixty-five percent of parents want their children to have a profession such as a doctor, lawyer, banker or president. Less preferable are other professions such humanitarian-aid worker or a movie star.

- b. Since 9% of parents want their children to become an athlete, we find $550 \times 0.09 \approx 50$. Therefore, among 550 parents approximately 50 parents want their kids to become an athlete.

a.

Notice that the most frequent responses were regards to paying off debts or putting it in the bank.

- b. Since 11% of 1026 respondents said they would spend the refund, we find $0.11(1026) \approx 113$. Therefore, approximately 113 of the respondents would spend the tax refund.

58.

- a. The pie chart is below.

The chart shows the highest percentage of people live in the South and the lowest percentage live in the Northeast.

b.

The chart shows the highest percentage of people living in poverty are in the South and the lowest percentage of people living in poverty are living in the Northeast. The percentage of people living in poverty in the South is higher than the percentage of people that live in South, and the percentage of people living in poverty in the Northeast is less than the percentage of people that live in the Northeast.

62.

- a. There were 4 people out of 25 with a net worth greater than \$20 billion. Since $4/25 = 0.16$, 16% of the wealthiest people had net worth greater than \$20 billion.
- b. Two people had a net worth less than \$10 billion, which is $2/25 = 0.08$, or 8%. From the previous question, we know that 16% had a net worth greater than \$20 billion. Therefore, $16\% + 8\% = 24\%$ *did not* have a net worth between \$10 and \$20 billion. Consequently, 76% had net worth between \$10 billion and \$20 billion.

The vast majority of the PEG ratios fall in the 1 range. The diagram represents somewhat positively skewed distribution; there are a few firms with relatively high PEG ratios.

64.

a.

These charts show that the majority (60%) of houses were either Ranch or Colonial, but also 40% were either Contemporary or some other type.

- b. To figure out how wide to make the classes, find the highest price and subtract the lowest price to get the range. That is $\$568,000 - \$300,000 = \$268,000$. Then, since we want 7 classes, divide the range by 7; $268,000/7 = \$38,386$. However, for ease of interpretation, round to the

most sensible number: \$50,000. Therefore, our classes will have a width of \$50,000, with a lower bound of the first class of \$300,000.

c.

The histogram shows that the most frequent house price is in the \$350,000 up to \$400,000 range. The ogive shows that the middle price (with a frequency of 10/20 or 50%) is about \$400,000.

65.

The scatter plot shows that the relation between Advertising and Sales is positive. The positive trend demonstrates that an increase in advertising will tend to increase sales.

66.

The scatterplot reveals no clear relationship between PPG and MPG.
