96. During the month of January, Marcos & Henesey, Inc. had total manufacturing costs of \$165,000. It incurred \$62,000 of direct labor cost and \$40,000 of manufacturing overhead cost during the month. If the materials inventory on January 1 was \$5,800 less than the materials inventory on January 31, what was the cost of materials purchased during the month?

a. \$53,650

b. \$68,800

c. \$58,000

d. \$93,800

ANSWER:

Copyright Cengage Learning. Powered by Cognero.

b

RATIONALE:	SUPPORTING CALCULATIONS: Direct materials used = Total manufacturing cost - (Direct labor cost + Overhead cost) = \$165,000 - (\$62,000 + \$40,000) = \$165,000 - \$102,000 = \$63,000 Direct materials purchased = Direct materials used + Difference in inventory balances = \$63,000 + \$5,800 = \$68,800

101. If total warehousing cost for the year amounts to \$950,000, and 35 percent of the warehousing activity is associated with finished goods and 65 percent with direct materials, how much of the cost would be charged as a product cost?

a. \$285,000	
b. \$332,500	
c. \$617,500	
d. \$950,000	
ANSWER:	С
RATIONALE:	SUPPORTING CALCULATIONS: Total product cost = Total cost × Percent of direct materials = $950,000 \times 0.65 = \frac{617,500}{2}$

103. All of Eva Enterprise's operations are housed in one building with the costs of occupying the building accumulated in a separate account. The total costs incurred in July amounted to \$48,000. The company allocates these costs on the basis of square feet of floor space occupied. Administrative offices, sales offices, and factory operations occupy 9,000, 6,000, and 30,000 square feet, respectively. How much will be classified as a product cost for July?

d
SUPPORTING CALCULATIONS: [30,000/(9,000 + 6,000 + 30,000)] × \$48,000 = <u>\$32,000</u>

140. The records of Bentler Shoppers, Inc. for December 2018 shows the following information:

Sales	\$2,050,000
Selling and administrative expenses	250,000
Direct materials purchases	205,000
Direct labor	298,000
Factory overhead	350,000

Direct materials, December 31	41,000
Work-in-process, December 31	72,000
Finished goods, December 31	55,000

The net income for the month of December is:

a. \$875,000.	
b. \$916,000.	
c. \$884,000.	
d. \$770,000.	
ANSWER:	b
RATIONALE:	SUPPORTING CALCULATIONS:
	Cost of goods manufactured = (Beginning direct materials + Direct materials purchases -
	Ending direct materials) + (Direct labor + Factory overhead + Beginning work in process -
	Ending work in process) = $(\$50,000 + \$205,000 - \$41,000) + (\$298,000 + \$350,000 + \$205,000)$
	85,000 - 72,000 = 875,000

Chapter	2

	Cost of goods sold = Cost of goods manufactured + Beginning finished goods - Ending finished goods = $\$75,000 + \$64,000 - \$55,000 = \underline{\$884,000}$ Net income = Sales - Cost of goods sold - Selling and administrative expense = $\$2,050,000 - \$884,000 - \$250,000 = \underline{\$91}6,000$

191. Describe a cost mana <i>ANSWER:</i>	 agement information system, its objectives, and major subsystems. The cost management information system is an accounting information subsystem that is primarily concerned with producing outputs for internal users using inputs and processes needed to satisfy management objectives. The objectives are as follows: To provide information for costing out services, products, and other objects of interest to management. To provide information for planning and control. To provide information for decision making. The major subsystems of a cost management information system are the cost accounting information system and the operational control information system.

192. Explain the differences between direct tracing, driver tracing, and allocation.			
ANSWER:	Direct tracing is the process of identifying and assigning costs to a cost object that are specifically or physically associated with the cost object. Driver tracing is assigning costs using drivers, which are causal factors. The driver approach relies on identification of factors that allegedly capture the causal relationship. Allocation is the assignment of indirect costs to cost objects based on convenience or assumed linkages.

194. Big Foot Athletics designs and manufactures running shoes. A new model of shoes, Fast Track, has been developed and is ready for production.

Required:

Which costs will the production manager collect from the value chain, and how would these costs be used in different decisions?

- traditional product costs a.
- operating product costs b.
- value-chain product costs с.

ANSWER:

Production costs would be included in all of the above definitions.

	a. traditional product costs:	Direct materials, direct labor and manufacturing overhead are the traditional product costs. They would be used for external reporting, budgeting, and control of costs.	
	b. operating product costs:	In addition to the traditional product costs, marketing and customer service costs would be considered in analyzing profitability of the product. Strategic questions about the operating design, i.e., materials and plant layout, would be addressed. The focus is on the revenue and cost of Fast Track.	
	c. value-chain product costs:	Production costs of Fast Track must be viewed in relation to other products. Strategic pricing and product mix decisions must be made. The profitability of all the product lines is at issue.

202. In choosing a cost management system, the controller must balance the total costs of implementing such systems. What costs must be balanced to determine total cost? How do traditional and activity-based cost systems balance the trade-offs?

ANSWER:	Error costs and measurement costs must be considered in choosing a cost management system. Activity-based cost management has greater measurement costs due to analyzing many activities but has greater accuracy and fewer error costs. Functional-based cost systems have lower measurement costs but higher error costs. Controllers must assess the need for accuracy in costing, pricing, and managing profitability.

203. The cost of goods sold for the Immaculate Corporation for the month of April 2018 was \$450,000. Work-in-process inventory at the end of April was 95 percent of the work-in-process inventory at the beginning of the month. Overhead is 80 percent of the direct labor cost. During the month, \$110,000 of direct materials were purchased. Revenues for Immaculate were \$600,000, and the selling and administrative costs were \$70,000. Other information about Immaculate's inventories and production for April was as follows:

Ending inventories-April 30	
Direct materials	\$ 19,000
Work in process	?
Finished goods	105,000
Beginning inventories-April 1	
Direct materials	\$ 22,200
Work in process	40,000
Finished goods	208,500

Required:

- a. Prepare a cost of goods manufactured and cost of goods sold statements.
- b. Prepare an income statement.
- c. What are the prime costs, conversion costs, and period costs?

a.

ANSWER:

Immaculate Corporation Statement of Cost of Goods Manufactured For Month of April 2018

Direct Materials:	
Beginning inventory*	\$ 22,200
Add: Purchases*	110,000
Materials available	\$132,200
Less: Ending inventory*	19,000
Direct materials used in production	\$113,200
Direct labor below	128,500
Manufacturing overhead ($$128,500 \times$	102,800
0.80)	102,800
Total manufacturing costs added	\$344,500
Add: Beginning work-in-process	40,000
inventory*	40,000
Total costs in process	\$384,500
Less: Ending work-in-process inventory	38,000
(\$40,000 × 0.95)	
Cost of goods manufactured (from	\$246 500
COGS statement)	<u>\$346,500</u>

DM used = 22,200 + 110,000 - 19,000 = 113,200CGM = 450,000 + 105,000 - 208,500 = 346,500

Total manufacturing costs added = DM + DL + MOH\$344,500 = 113,200 + DL + MOH\$231,300 = DL + MOH\$231,300 = $DL + \{MOH = 0.80 \times DL\}$ \$231,300 = DL + .8DL\$231,300 = DL + .8DL\$231,300 = DL + .8DL\$128,500 = DLMOH = $0.80 \times DL$ MOH = $0.80 \times 128,500 = 102,800$

Immaculate Corporation Cost of Goods Sold Statement For Month of April 2018

Cost of goods sold*:	
Add: Cost of goods manufactured	\$346,500
Beginning inventory finished goods*	208,500
Cost of goods available for sale	\$555,000
Less: Ending inventory finished goods*	105,000
Cost of Goods Sold*	<u>\$450,000</u>

*These items are provided.

b.

Income Statement For Month of April 2018

	Sales*\$600,000Less: Cost of goods sold*:\$346,500Add: Cost of goods manufactured\$346,500Beginning inventory finished goods*208,500Cost of goods available for sale\$555,000Less: Ending inventory finished goods*105,000Gross margin\$150,000Less: Selling and administrative expenses*70,000Operating income\$80,000	
	•	
	c. Conversion costs = direct labor and overhead = $$231,300$ = $$128,500 + $102,800 = $231,300$	
	Prime costs = $DM + DL = \$113,200 + \$128,500 = \$241,700$

204. The following items (partial list) are associated with a functional-based cost accounting information system, an activity-based cost accounting information system, or both:

- a. materials purchasing cost incurrence
- b. assignment of purchasing cost to products using direct labor hours
- c. assignment of purchasing cost using number of purchase orders
- d. usage of direct materials
- e. direct materials cost assigned to products using direct tracing
- f. materials handling cost incurrence
- g. materials handling cost assigned using direct labor hours
- h. materials handling cost assigned using the number of moves as the driver

- i. computer
- j. materials handling equipment
- k. decision to make a part or buy it from a supplier
- 1. costing out of products
- m. report detailing individual product costs

Required:

- 1. For an activity-based cost system, classify the items into one of the following categories:
 - a. interrelated parts
 - b. processes
 - c. objectives
 - d. inputs
 - e. outputs
 - f. user actions
- 2. How would the choices differ between the two systems? What are the costs and benefits of each?
- ANSWER:

- 1. The activity-based cost accounting system:
 - a. interrelated parts: computer
 - b. processes: cost assignment: direct tracing of materials, driver tracing of purchasing costs (orders), materials handling cost (moves)
 - c. objectives: costing out of products
 - d. inputs: direct materials cost, purchasing cost, materials handling cost
 - e. outputs: product cost report
 - f. user actions: make-or-buy decision
- 2. The difference in the costing systems is found in the processes. A functional-based cost system would not use nonunit drivers such as moves and orders to assign overhead but would use a unit driver like direct labor hours. There is increased accuracy of the cost assignments in an activity-based system, and a more comprehensive idea of costs may be used for decision making.

The activity-based cost accounting system is more expensive to develop but has the benefit of more comprehensive uses for cost information. The functional-based cost system is simpler and less expensive to implement but the information generated is less versatile.

205. Describe several of the major differences between a traditional cost management system and an activity-based cost management system.			
ANSWER:	The traditional cost accounting system assumes that all costs can be classified as fixed or variable with respect to changes in the units or volume of product produced.		
	The activity-based cost management system's objective is to improve the quality, content, relevance, and timing of information.		
	A comparison of the two systems is shown below:		
	 Traditional Unit-based drivers Allocation-intensive Narrow and rigid product costing Focus on managing costs Sparse activity information Maximization of individual unit performance Uses financial measures of performance 	2. 3. 4. 5. 6.	Activity-based Unit and non-unit-based drivers Tracing-intensive Broad, flexible product costing Focus on managing activities Detailed activity information Systemwide performance maximization Uses both financial and nonfinancial
