65. Describe the different w	vays you can sort data in a table and how to do so.

65. Describe the different ways you can sort data in a table and how to do so.

Rows in a table can be sorted in alphabetical or sequential order, based on the data in one or more columns. To sort data in a table you specify which column(s) to sort by, what type of data you are sorting, and the sort order. You can sort data in ascending order, which lists data alphabetically or sequentially (A-Z, 0-9, or earliest to latest), or in descending order, which lists data in reverse alphabetical or sequential order (Z-A, 9-0, or latest to earliest).

Click the Sort command in the Data group on the Table Tools Layout tab to open the Sort

ANSWER:

Date:

nally,

	dialog box. Choose which column(s) to sort by, choose the type of information you are sorting (text, numbers, or dates), and set the sort order (ascending or descending). Finally select secondary and tertiary sort criteria if you are sorting by multiple columns.

Subjective Short Answer

72. Anne Michael is working with the table shown below. Explain what will happen when she works with the PaymentNo field in Datasheet View.

Field Name	Data Type
PaymentNo	AutoNumber
PaymentDate	Date/Type
PaymentAmt	Currency
SalesNo	Number

ANSWER: The PaymentNo field is an AutoNumber data type. Access automatically provides a unique, sequential value for each record. Anne will not be able to edit that value. POINTS: 1 **REFERENCES:** Access 106 **Design Related Tables QUESTION TYPE:** Subjective Short Answer HAS VARIABLES: False LEARNING OBJECTIVES: ENHA.FRIE.16.087 - Set field data types in Table Design View TOPICS: Critical Thinking DATE CREATED: 2/26/2016 8:21 PM DATE MODIFIED: 5/17/2016 3:33 PM 73. How does the Enforce Referential Integrity option relate to the creation of orphan records? ANSWER: Enforce Referential Integrity is a set of rules to help ensure that no orphan records are created in the database. An orphan record is a record in the "many" table that has no match in the "one" table. Checking the Enforce Referential Integrity option prevents this possibility for new records entered into the database. 1 POINTS: **REFERENCES:** Access 109 Create One-to-Many Relationships **QUESTION TYPE:** Subjective Short Answer

74. Kelsey wants to create queries to answer management questions from a relational database she does not have much experience with. Why might a Relationships report help her create the queries?

ANSWER:	A Relationship report would show her how the relational database is designed and includes table names, field names, primary key fields, and one-to-many relationships. This is information that is helpful when creating queries given a query often requires that you select fields from multiple tables. Therefore, she first needs to know the field names, tables, and how the tables are related in order to select the fields you want for the query. The less familiar she is with the database, the more valuable the Relationship report is in explaining how it is structured.

62. How can you animate objects in PowerPoint?

ANSWER:	To add animation to a PowerPoint object, you first select the object, then apply a standard animation from the Animation group on the Animations tab. You can then customize the
	animation by changing the timing, speed, and direction. Animations have many effects that
	you can change including entrance, exit, emphasis, and motion path. All of these effects are
	found through the menu at the bottom of the Animation Gallery.

63. What are font themes a	nd how do you go about modifying the font themes in PowerPoint?
ANSWER:	Font themes are a set of two fonts: major fonts for headlines and minor fonts for body text. Font themes may be the same or contrasting. To change the font theme, you first go to Slide Master view. Then, right-click one of the text placeholders on the master and choose what you would like to edit (bullets, font, etc). Switch to Normal view and you will see the changes that were made.

### PowerPoint Module 5: Working with Advanced Tools and Masters

64. Define the following terms: indent levels, indent markers, and tab selector. Name and briefly describe the four tab options (hint: One tab option is a Decimal-aligned tab).

ANSWER:	Master text and content placeholders have five levels of text, called <u>indent levels</u> . You can modify indent levels using PowerPoint's ruler. The position of each indent level on the ruler is represented by two small triangles and a square called <u>indent markers</u> . You can modify an indent level by moving these indent markers on the ruler. You can also set tabs on the horizontal ruler, which identifies where a text indent or a column of text begins. By clicking the <u>tab selector</u> located at the far left of the horizontal ruler, you are able to choose which of the four text begins.
	the four tab options you want to use.
	Left-aligned tab: Aligns tab text on the left
	Center-aligned tab: Aligns tab text in the center
	<u>Right-aligned tab</u> : Aligns tab text on the right
	Decimal-aligned tab: Aligns tab text on a decimal point
