Correlation Chart between Bloom's Taxonomy, Learning Objectives and End-of-Chapter Exercises and Problems

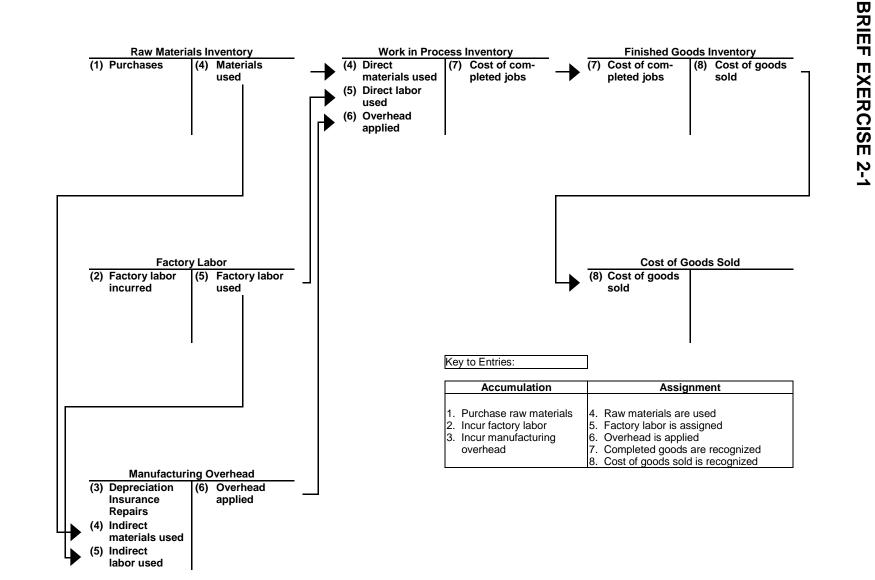

ANSWERS TO QUESTIONS

- 1. (a) Cost accounting involves the measuring, recording, and reporting of product costs. A cost accounting system consists of manufacturing cost accounts that are fully integrated into the general ledger of a company.
 - (b) An important feature of a cost accounting system is the use of a perpetual inventory system that provides immediate, up-to-date information on the cost of a product.
- 2. (a) The two principal types of cost accounting systems are: (1) job order cost system and (2) process cost system. Under a job order cost system, costs are assigned to each job or batch of goods; at all times each job or batch of goods can be separately identified. A job order cost system measures costs for each completed job, rather than for set time periods. Under a process cost system, product-related costs are accumulated by or assigned to departments or processes for a set period of time. Job order costing lends itself to specific, special-order manufacturing or servicing while process costing is better suited to similar, large-volume products and continuous process manufacturing.
 - (b) A company can use both types of systems. For example, General Motors uses process costing for standard model cars and job order costing for custom-made vehicles.
- **3.** A job order cost system is most likely to be used by a company that receives special orders, or custom builds, or produces heterogeneous items or products; that is, the product manufactured or the service rendered is tailored to the customer or client's requests, needs, or situation. Examples of industries that use job order systems are custom home builders, commercial printing companies, motion picture companies, construction contractors, repair shops, accounting and law firms, hospitals, shipbuilders, and architects.
- 4. A process cost system is most likely to be used by manufacturing firms with continuous production flows usually found in mass production, assembly line, large-volume, uniform, or relatively similar product industries. Companies producing appliances, chemicals, pharmaceuticals, rubber and tires, plastics, cement, petroleum, and automobiles utilize process cost systems.
- 5. The major steps in the flow of costs in a job order cost system are: (1) accumulating the manufacturing costs incurred and (2) assigning the accumulated costs to work done.
- The three inventory control accounts and their subsidiary ledgers are: Raw materials inventory—materials inventory records. Work in process inventory—job cost sheets. Finished goods inventory—finished goods records.
- 7. The source documents used in accumulating direct labor costs are time tickets and time cards.
- **8.** Disagree. Entries to Manufacturing Overhead are also made at the end of an accounting period. For example, there will be adjusting entries for factory depreciation, property taxes, and insurance.
- **9.** The source document for materials is the materials requisition slip and the source document for labor is the time ticket. The entries are:

Materials			Labor		
Work in Process Inventory	XX		Work in Process Inventory	XX	
Manufacturing Overhead	XX		Manufacturing Overhead	XX	
Raw Materials Inventory		XX	Factory Labor		XX

Questions Chapter 2 (Continued)

- **10.** The purpose of a job cost sheet is to record the costs chargeable to a specific job and to determine the total and unit costs of the completed job.
- **11.** The source documents for charging costs to specific jobs are materials requisition slips for direct materials, time tickets for direct labor, and the predetermined overhead rate for manufacturing overhead.
- 12. The materials requisition slip is a business document used as an authorization to issue materials from inventory to production. It is approved and signed by authorized personnel so that materials may be removed from inventory and charged to production, to specific jobs, departments, or processes. The materials requisition slip is the basis for posting to the materials inventory records and to the job cost sheet.
- **13.** Disagree. Actual manufacturing overhead cannot be determined until the end of a period of time. Consequently, there could be a significant delay in assigning overhead and in determining the total cost of the completed job.
- 14. The relationships for computing the predetermined overhead rate are the estimated annual overhead costs and an expected activity base such as direct labor hours. The rate is computed by dividing the estimated annual overhead costs by the expected annual operating activity.
- **15.** At any point in time, the balance in Work in Process Inventory should equal the sum of the costs shown on the job cost sheets of unfinished jobs. Alternatively, posting to Work in Process Inventory may be compared with the sum of the postings to the job cost sheets for each of the manufacturing cost elements.
- **16.** Jane is incorrect. There is a difference in computing total manufacturing costs. In job order costing, manufacturing overhead applied is used, whereas in Chapter 1, actual manufacturing overhead is used.
- **17.** Underapplied overhead means that the overhead assigned to work in process is less than the overhead incurred. Overapplied overhead means that the overhead assigned to work in process is greater than the overhead incurred. Manufacturing Overhead will have a debit balance when overhead is underapplied and a credit balance when overhead is overapplied.
- **18.** Under- or overapplied overhead is not closed to Income Summary. The balance in Manufacturing Overhead is eliminated through an adjusting entry. Under- or overapplied overhead generally is considered to be an adjustment of Cost of Goods Sold.

BRIEF EXERCISE 2-2

Jan. 31	Raw Materials Inventory Accounts Payable	4,000	4,000
31	Factory Labor Factory Wages Payable Employer Payroll Taxes Payable	6,000	5,200 800
31	Manufacturing Overhead Utilities Payable	2,000	2,000

BRIEF EXERCISE 2-3

Jan. 31	Work in Process Inventory	2,800	
	Manufacturing Overhead	600	
	Raw Materials Inventory		3,400

BRIEF EXERCISE 2-4

Jan. 31	Work in Process Inventory	5,200	
	Manufacturing Overhead	800	
	Factory Labor		6,000

BRIEF EXERCISE 2-5

	Job 1			Job 2				
Date	Direct Materials	Direct Labor		Date	Direct Materials	Direct Labor		
1/31	900			1/31	1,200			
1/31		2,200		1/31		1,600		

Job 3				
Direct Direct				
Date	Materials	Labor		
1/31	700			
1/31		1,400		

BRIEF EXERCISE 2-6

Overhead rate per direct labor cost is 180%, or ($$900,000 \div $500,000$). Overhead rate per direct labor hour is \$18, or ($$900,000 \div 50,000$ DLH). Overhead rate per machine hour is \$9, or ($$900,000 \div 100,000$ MH).

BRIEF EXERCISE 2-7

Jan. 31	Work in Process Inventory Manufacturing Overhead (\$40,000 X 70%)	28,000	28,000
			20,000
Feb. 28	Work in Process Inventory Manufacturing Overhead	21,000	
	(\$30,000 X 70%)		21,000
Mar. 31	Work in Process Inventory Manufacturing Overhead	35,000	
	(\$50,000 X 70%)		35,000
BRIEF EX	KERCISE 2-8		
Mar. 31	Finished Goods Inventory	50,000	50 000
	Work in Process Inventory		50,000
31	Cash Sales Revenue	35,000	35,000
31	Cost of Goods Sold	20,000	
	Finished Goods Inventory		20,000
BRIEF EX	KERCISE 2-9		
	Service Contracts in Process	28,000	
	Operating Overhead Service Salaries and Wages	8,000	36,000
	Service Contracts in Process		
	(\$28,000 X .25) Operating Overhead	7,000	7,000

BRIEF EXERCISE 2-10

Dec. 31	Shimeca Company Cost of Goods Sold Manufacturing Overhead	1,200	1,200
Dec. 31	Garcia Company Manufacturing Overhead Cost of Goods Sold	900	900
	SOLUTIONS FOR DO IT! REVIEW EXERCI	SES	
DO IT! 2	-1		
(a) Rav	v Materials Inventory Accounts Payable (Purchases of raw materials on account)	18,000	18,000
(b) Fac	tory Labor Factory Wages Payable Employer Payroll Taxes Payable (To record factory labor costs)	40,000	31,000 9,000
(c) Mar	nufacturing Overhead Accumulated Depreciation—Buildings Utilities Payable Prepaid Property Taxes (To record overhead costs)	15,300	9,500 3,100 2,700

DO IT! 2-2

The three summary entries are:

Work in Process Inventory (\$7,200 + \$9,000) Raw Materials Inventory (To assign materials to jobs)	16,200	16,200
Work Process Inventory (\$4,000 + \$8,000) Factory Labor (To assign labor to jobs)	12,000	12,000
Work in Process Inventory (\$5,200 + \$9,800) Manufacturing Overhead (To assign overhead to jobs)	15,000	15,000

DO IT! 2-3

The predetermined overhead for Washburn Company is:

\$200,000 ÷ 2,500 hours = \$80.00

The amount of overhead assigned to number 551 would be:

90 hours × \$80.00 = \$7,200

The entry to record the assignment of overhead to job number 551 on January 15^{th} is:

January 15	Work in Process Inventory	7,200	
	Manufacturing Overhead	•	7,200
	(To assign overhead to jobs)		

DO IT! 2-4

Finished Goods Inventory Work in Process Inventory (To record completion of Job 310, costing \$70,000 and Job 312, costing \$50,000)	120,000	120,000
Accounts Receivable Sales Revenue (To record sale of Job 312)	90,000	90,000
Cost of Goods Sold Finished Goods Inventory (To record cost of goods sold for Job 312)	50,000	50,000

DO IT! 2-5

Manufacturing overhead applied = 130% X \$85,000 = \$110,500 Underapplied manufacturing overhead = \$115,000 - \$110,500 = \$4,500

SOLUTIONS TO EXERCISES

EXERCISE 2-1

31	Work in Process Inventory (\$12,500 X 60%) Manufacturing Overhead	7,500	7,500
31	Finished Goods Inventory Work in Process Inventory (\$2,000 + \$2,500 + \$1,900 + \$1,140*)	7,540	7,540
*\$1,	900 X 60%		

(b)	Work in Process Inventory			
	May 1 Balance	3,500	May 31	7,540
	31	10,400	-	
	31	12,500		
	31	7,500		
	May 31 Balance	26,360		

EXERCISE 2-2 (Continued)

Job Cost Sheets					
Job	Beginning Work	Direct	Direct	Manufacturing [*]	Total
No.	in Process	Material	Labor	Overhead	
430	\$1,500	\$3,500	\$ 3,000	\$1,800	\$ 9,800
431	<u>0</u>	<u>4,400</u>	<u>7,600</u>	<u>4,560</u>	<u>16,560</u>
	<u>\$1,500</u>	\$7,900	<u>\$10,600</u>	<u>\$6,360</u>	<u>\$26,360</u>

*Direct labor X .60

EXERCISE 2-3

- (a) 1. \$15,200, or (\$5,000 + \$6,000 + \$4,200).
 - Last year 70%, or (\$4,200 ÷ \$6,000); this year 80% (either \$6,400 ÷ \$8,000 or \$3,200 ÷ \$4,000).

(b)	Jan. 31	Work in Process Inventory Raw Materials Inventory	8,000	8,000
	31	Work in Process Inventory Factory Labor	12,000	12,000
	31	Work in Process Inventory Manufacturing Overhead	9,600	9,600
	31	Finished Goods Inventory Work in Process Inventory	44,800	44,800

EXERCISE 2-4

(a) + \$50,000 + \$42,500 = \$145,650 (a) = \$53,150

\$145,650 + (b) = \$201,500 (b) = \$55,850

\$201,500 - (c) = \$192,300 (c) = \$9,200 **EXERCISE 2-4 (Continued)**

[<u>Note</u>: The instructions indicate that manufacturing overhead is applied on the basis of direct labor cost, and the rate is the same in all cases. From Case A, a student should note the overhead rate to be 85%, or (\$42,500 ÷ \$50,000).]

```
(d) = .85 X $140,000
(d) = $119,000
$83,000 + $140,000 + $119,000 = (e)
(e) = $342,000
342,000 + 15,500 = (f)
(f) = $357,500
357,500 - 11,800 = (q)
(g) = $345,700
[<u>Note</u>: (h) and (i) are solved together.]
(i) = .85(h)
(63,150 + (h) + .85(h) = (213,000)
1.85(h) = $149,850
(h) = $81,000
(i) = $68,850
(j) = $213,000 + $18,000
(i) = $231,000
231,000 - (k) = 222,000
(k) = $9,000
EXERCISE 2-5
(a) $2.40 per machine hour ($300,000 ÷ 125,000 MH).
(b) ($322,000) – ($2.40 x 130,000 Machine Hours)
    $322,000 - $312,000 = $10,000 underapplied
(c) Cost of Goods Sold .....
                                                        10,000
        Manufacturing Overhead .....
                                                                 10,000
```

EXERCISE 2-6

(a)	 (1) The source documents are: Direct materials—Materials requisition slips. Direct labor—Time tickets. Manufacturing overhead—Predetermined overhead rate 	9.
	(2) The predetermined overhead rate is 125% of direct labor of example, on July 15, the computation is \$550 ÷ \$440 = 12 same result is obtained on July 22 and 31.	
	 (3) The total cost is: Direct materials Direct labor Manufacturing overhead The unit cost is \$3.10 (\$7,760 ÷ 2,500). 	\$4,700 1,360 <u>1,700</u> <u>\$7,760</u>
(b)	July 31 Finished Goods Inventory 7,760 Work in Process Inventory	7,760

BYP 2-1 DECISION-MAKING ACROSS THE ORGANIZATION

- (a) The manufacturing cost element that is responsible for the fluctuating unit costs is manufacturing overhead. Manufacturing overhead is being included as incurred rather than being applied on a predetermined basis. Direct materials and direct labor are not the cause as they have the same unit cost per batch in each quarter.
- (b) The solution is to apply overhead using a predetermined overhead rate based on a relevant basis of production activity. Based on actual overhead incurred and using batches of product TC-1 as the activity base, the overhead rate is \$16,000 per batch [(\$105,000 + \$153,000 + \$97,000 + \$125,000) ÷ 30]. Another approach would be to use direct labor cost as the relevant basis to apply overhead on a predetermined basis. For example, a rate of 133 1/3% of direct labor cost (\$480,000 ÷ \$360,000) could be used. Either approach will provide the same result.
- (c) The quarterly results using a predetermined overhead rate based on batches produced are as follows:

	Quarter				
Costs	1	2	3	4	
Direct materials	\$100,000	\$220,000	\$ 80,000	\$200,000	
Direct labor	60,000	132,000	48,000	120,000	
Manufacturing overhead Applied					
(\$16,000 X batches)	80,000	<u>176,000</u>	<u>64,000</u>	<u>160,000</u>	
Total (a)	<u>\$240,000</u>	<u>\$528,000</u>	<u>\$192,000</u>	<u>\$480,000</u>	
Production in batches (b)	5	11	4	<u> </u>	
Unit cost (per batch) (a) ÷ (b)	<u>\$ 48,000</u>	<u>\$ 48,000</u>	<u>\$ 48,000</u>	<u>\$ 48,000</u>	

(<u>Note</u>: The unit cost of a batch remains the same in each quarter. Both sales and production should be pleased with this solution to fluctuating unit costs.)

BYP 2-2

- 1. (a) Work in Process Inventory25,000Raw Materials Inventory25,000
 - (b) If not corrected, the balance sheet is affected. Cash is understated and Raw Materials Inventory is overstated.
- - (b) Both the income statement and the balance sheet are affected. In the income statement, Sales Bonus Expense is understated, Income Tax Expense is overstated, and net income is overstated. The error causes the underapplied overhead to be overstated or the overapplied overhead to be understated. This affects Cost of Goods Sold, since the over- or underapplied balance is closed out to Cost of Goods Sold. The error in Cost of Goods Sold also has an effect on Retained Earnings. Also, Retained Earnings is overstated because of the over-statement of net income, and Income Taxes Payable is overstated.
- 3. (a) Factory Labor120,000Factory Wages Payable.....102,000Employer Payroll Taxes Payable.....18,000
 - (b) If not corrected, both the income statement and the balance sheet are affected. On the income statement, Cost of Goods Sold is understated and Wages Expense is overstated. On the balance sheet, Cash, Factory Wages Payable, and Employer Payroll Taxes Payable are understated.

BYP 2-2 (Continued)

- - (b) Both the income statement and balance sheet are affected. If units that were in process during the month have been sold, then in the income statement Cost of Goods Sold is overstated, Income Tax Expense is understated, and net income is understated. This causes the Retained Earnings and Income Taxes Payable in the balance sheet to be understated. Also the error causes underapplied overhead to be understated or overapplied overhead to be overstated. This affects Cost of Goods Sold, since the over- or underapplied balance is closed out to Cost of Goods Sold. The error in Cost of Good Sold also has an affect on Retained Earnings.

BYP 2-3

- (a) Candidates for the CMA or CFM Certificate must complete two continuous years of professional experience in management accounting or financial management. This requirement may be completed prior to or within seven years of passing the examination.
- (b) CMAs, CFMs, and candidates who have completed the CMA and/or the CFM examination but have not yet met the experience requirement, are required to maintain their proficiency in the fields of management accounting and financial management. This includes knowledge of new concepts and techniques as well as their application in the management accounting and financial management professions. The objective is to maintain the professional competence of the individual and to enhance one's ability to perform job-related requirements. Persons who have retired need not meet continuing education requirements. The continuing requirement is 30 hours per year and at least 2 of those hours must be ethics-related.

A broad range of subjects may be included in the programs for which hours of credit will be given. The subjects should be related to the topics covered on the CMA/CFM examination and/or to an individual's job responsibilities. Illustrative of the subjects that may qualify are: all aspects of accounting, financial management, business applications of mathematics and statistics, computer science, economics, management, production, marketing, business law, and organizational behavior. **BYP 2-4**

Williams Company Date

Nancy Kopay 123 Cedar Lane Altoona, Kansas 66651

Dear Ms. Kopay:

Thank you for your prompt payment! I am very glad that you found the cost information helpful.

Thank you also for your questions about our overhead costs. We do try to provide our customers with as much information as possible, but we cannot give detailed information on overhead costs. The cost of providing such information is prohibitive.

You asked why we do not use actual overhead costs when we bill our customers. We estimate overhead costs, rather than use actual costs, for several reasons. One of the most important reasons for you is that we could not prepare bills in a timely manner if we had to use actual overhead. We would have to wait until we were billed for such things as electricity and telephone service. A second reason is that some costs we include in overhead are only payable once or twice a year, such as insurance and taxes. When we use an estimated rate, we are able to allow for those costs. A third reason is that some costs are fixed, which means that they stay the same in dollar amount from month to month. This category includes items such as rent. If we billed you based on our actual costs, you would be billed a higher amount if your work was done during a slow time (because we would have fewer jobs to spread the costs over). An estimated overhead rate allows us to level out these costs.

BYP 2-4 (Continued)

I hope this answers some of your questions. I'm glad you are interested in our company and that you took the time to write. I am sending a copy of our annual report under separate cover. It contains some details on the information you asked about.

Thanks again for your letter and for having Williams make your new cabinets!

Sincerely,

Student

BYP 2-5

- (a) The stakeholders in this situation are:
 - ► Alice Reiley, controller for LRF Printing.
 - ► The president of LRF Printing.
 - ► The customers of LRF Printing.
 - ► The competitors of LRF Printing.
- (b) Padding cost-plus contracts is both unethical and illegal. Alice is faced with an ethical dilemma. She will be in trouble with the president if she doesn't follow his directive, and she will be committing an unethical act if she does follow his instructions.
- (c) Alice should continue to accurately account for cost-plus contracts and, if challenged by the president, she should say that she is doing her very best to charge each and every legitimate cost to the cost-plus contracts. Let the president perform the unethical act if he continues to persist in padding costs.

BYP 2-6

- (a) Your chances of success in small business are increased if you have the following characteristics: You are a self-starter, you get along with many different kinds of people, you are good at making decisions, you have physical and emotional stamina, you are well organized, you have a strong desire to succeed and you will receive family support during the start up phase.
- (b) The top ten reasons why businesses fail as cited in the books <u>Small</u> <u>Business Management</u> by Michael Ames, and <u>The Do it Yourself</u> <u>Business Book</u> by Gustav Berle are:
 - 1. Lack of experience
 - 2. Insufficient capital (money)
 - 3. Poor location
 - 4. Poor inventory management
 - 5. Over-investment in fixed assets
 - 6. Poor credit arrangements
 - 7. Personal use of business funds
 - 8. Unexpected growth
 - 9. Competition
 - 10. Low sales

BYP 2-7 CONSIDERING YOUR COSTS AND BENEFITS

Discussion guide: The situation presented is a difficult one because you are presently receiving some help for free. It would seem that the best strategy is to price your services based on what it would cost you to do the landscape business without any free help. In the long run, it is going to be impossible to continue unless you can cover these costs. In addition, if you underprice your services today, your customers may expect your prices will remain as low in the future. That probably cannot happen, given that your costs will increase substantially after the first two years. However, we should note that it is not unusual to start a small business with some assets available to you. Then, as your business grows, you acquire additional assets to meet your needs. After all, you may need a low price to get started, and as you gain experience you will be able to charge more or become more efficient.

So what to do? Let's address your old truck first. You should treat the truck as an asset owned by your business. Put it on your books at its fair value, and depreciate it over a reasonable life. This will result in an overhead charge. You need to cover the cost of that truck, as you will have to buy another one some day. The land, barn, and your mother's services are a little more difficult. If you rented the land and barn and if you paid an assistant, all of these costs would be charged to overhead. (The assistant would be indirect labor.) You are currently getting all these services for free. This is a good situation now, and you may need this situation early in your business to help you get started. But you should recognize that even if you run your business profitably for the first two years, you may have problems beginning in the third year. Thus, it would seem prudent to establish a budget based on both scenarios for the first two years. If you can charge based on your expected costs in the future, do so. If that is not realistic, because you need to establish yourself and get more experience, then charge less. But be sure from the start to cover a reasonable amount of your costs, or the business does not make sense for you financially.
