ESSAY

1. Describe the basics of SWOT analysis.

ANS:

SWOT analysis permits the organization to formulate strategy based upon internal and external analysis of strengths, weaknesses, opportunities and threats. Strengths and weaknesses are internal factors, while opportunities and threats are external factors. Managers can build upon SWOT analysis to formulate corporate, business and HR strategies for the firm.

PTS: 1 REF: p. 67 OBJ: 2-5

2. Describe the criteria necessary for firms to achieve sustained competitive advantage through people.

ANS:

For an organization to achieve sustained competitive advantage through people, four criteria must be met.

- a. First, the resources that are developed must be of value to the organization. People are a source of competitive advantage when they improve the efficiency or effectiveness of the company. This value is increased when employees find ways to decrease costs, provide something unique to customers, or some combination of the two.
- b. Second, the resources must be rare. People are a source of competitive advantage when their skills, knowledge, and abilities are not equally available to competitors.
- c. Third, people are a source of competitive advantage when employee capabilities and contributions are inimitable, or cannot be copied by other firms. For example, companies such as Disney, Southwest Airlines, and Starbucks are known for creating unique cultures that get the most from employees and are difficult to imitate.
- d. Finally, people are a source of competitive advantage when their talents can be combined and deployed to work on new assignments at a moment's notice when they are organized. For example, information technology, teamwork, and cooperation are methods for ensuring an organized workforce.

PTS: 1 REF: p. 54 OBJ: 2-3

3. Describe the three key elements of the HR Forecasting model.

ANS:

The three key elements in the HR Forecasting process are: (1) forecasting demand, (2) forecasting supply, and (3) balancing supply and demand considerations.

Employment forecasting involves estimating in advance the number and type of people needed to meet organizational objectives. It may involve a quantitative approach using statistical analysis and mathematical models or a qualitative approach focusing on employee performance and promotability.

Supply analysis determines if there are sufficient numbers and types of employees available to staff anticipated openings. Sources of supply can be external or internal.

HR planning should strive for a proper balance between the emphasis placed on demand considerations and that placed on supply considerations. Demand considerations are based on the forecast of trends in business activity. Supply considerations involve the determination of where and how candidates with the required qualifications are to be found to fill vacancies.

4. What is the Balanced Scorecard?

ANS:

The Balanced Scorecard is a tool developed by Drs. Robert Kaplan and David Norton that helps organizations clarify their vision and strategy and translates them into operational objectives. This tool builds on some existing key management concepts like customer-defined quality, continuous improvement, employee empowerment, and measurement-based management and feedback.

The model has four related cells: (1) financial, (2) customer, (3) processes, and (4) learning. The logic of this tool is firmly rooted in HRM. People management and learning helps management improve their internal business processes (e.g., product development, service, etc.) and provide excellent customer service. Internal processes are critical for creating customer satisfaction, customer loyalty, contain costs, and improve productivity. Customer value creation then can lead to higher profitability and market value.

5. How would you define "organizational capability"?

ANS:

Organizational capability refers to the capacity of the organization to continuously act and change in pursuit of sustainable competitive advantage.

Flexibility and agility when the environment changes can be enhanced by HR planning. Coordination flexibility refers to rapid reallocation of resources to new or changing needs, and resource flexibility results from having people who can do many different things in many different ways
