				ative that best completes the statement or answers the quest	ion.
-	as categorical c	-			1\
1)	•			e student and staff lots at a large college recorded the make	1)
			iles. The va	ariable "make" is:	
	A) Categori	cal		B) Quantitative	
2)	The amount o	f time spent v	watching to	elevision or playing video games is considered a significant	2)
	factor on pred	icting childh	ood obesit	y. 290 parents of school-aged children were asked to	
	estimate the n	umber of hou	ırs per we	ek that their child spent watching television or playing	
	video games.	This is an exa	mple of w	hat type of variable?	
	A) Quantita	tive		B) Categorical	
3)	Your statistics	teacher has	gathered ir	nformation on each of the students in your class in order to	3)
•		7	-	gorical and quantitative variables. For each student, she	,
				and height. The variable "major" is an example of what	
	type of variab	, .	. 0		
	A) Quantita			B) Categorical	
4)	Your statistics	teacher has s	pathered in	nformation on each of the students in your class in order to	4)
-)		7	-	gorical and quantitative variables. For each student, she	-)
				and height. The variable "age" is an example of what type	
	of variable?	ricii iiiajoi, g	erraer, age	and neight. The variable age is an example of what type	
	A) Quantita	tive		B) Categorical	
	, 2			,	
Classify	the variable as	either discre	te or conti	nuous.	
5)	The time it tak	es an athlete	to run 100	meters.	5)
•	A) Continue			B) Discrete	,
	·				
6)	The number o	f calls receive	ed betweer	n 8 a.m. and 5 p.m. by a technical support professional.	6)
	A) Continue	ous		B) Discrete	
7)	The following	table shows	the height:	s of the five tallest mountains in North America.	7)
,					,
	Mountain		Kank		
	McKinley	20,320	1		
	Logan	19,850	2		
	Citlaltepec	18,700	3		
	St. Elias	18,008	4		
	Popocatepetl	17,930	5		
	The ranks give	en in the third	d column r	represent what type of data?	
	A) Discrete			B) Continuous	
8)	The following	table shows	the height:	s of the five tallest mountains in North America.	Th second

) The following	, table shows	o tite riergi	its of the five tailest mountains in North America.	III second
Mountain	Height (ft)	Rank		e column heirepresen

SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question.

38) The scores for a statistics test are as follows:

```
87 76 94 77 95 96 88 85 66 89
79 98 54 90 83 88 82 55 14 69
```

Create a stem-and-leaf display for the data. The stem should consist of the tens digit and range from 1 to 9. The leaves should be drawn aside the appropriate stem based on the data values.

39) The table below shows the unemployment rate in one city from 2003 to 2012.

Year	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012
Unemployment										
Rate (Percent)	5.90	5.78	5.45	5.28	5.06	4.88	4.80	4.63	4.44	4.24

- a. Construct a time plot for these data.
- b. Is there a trend? If so, what kind?
- c. Would a histogram more clearly describe the above dataset? Explain.

MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question. A sporting goods retailer conducted a customer survey to determine its customers primary reason for shopping at their store. The results are shown in the graph below.

39) _____

- 40) What proportion of the customers responded that the merchandise was the reason they shopped at the store?
 - A) none of these
 - B) 0.43
 - C) 0.50
 - D) 30
 - E) 0.30
- 41) What response represents the mode?

41) _____

40) ___

- A) Other
- B) Merchandise
- C) Convenience
- D) Prices
- 42) Is the variable "reason for shopping at our store" categorical or quantitative?

42) _____

A) Quantitative

- B) Categorical
- 43) What percentage of the customers gave "prices" or "merchandise" as their answer?
- 43)

44) ____

- A) 0.10
- B) 0.14
- C) 0.20
- D) 0.30
- E) 0.71

The bar graph below shows the political party affiliation of 1000 registered U.S. voters.

- 44) What percentage of the 1000 registered U.S. voters belongs to one of the two traditional parties (Democratic and Republican)?
 - A) 25%
- B) 75%
- C) 40%
- D) 35%
- E) 50%

45) About how many of the registered U.S. voters stated "Independent" as their political party affiliation?

45) __

- A) cannot be determined from the information given
- B) 150
- C) 15%
- D) 15
- 46) Which response represents the mode?

46) ____

- A) 40%
- B) Democrat
- C) 10%
- D) Independent
- E) Republican

Provide an appropriate response.

47) Results from a survey of 7116 vehicle types on the campus of State College are summarized in the following pie chart.

47) _____

How many of the vehicles were sedans? Give your answer to the nearest whole number.

A) 600

- B) 4270
- C) 6
- D) 60
- E) 427

Construct a pie chart illustrating the given data set.

48) After reviewing a movie, 900 people rated the movie as excellent, good, or fair. The following 48) ____ data give the rating distribution.

Excellent	Good	Fair
180	450	270
(

A sample of fifty motorists was taken on a Federal highway where the speed limit was 60 miles per hour. A dot plot of their speeds is shown below.

A survey was conducted to determine how people rated the quality of programming available on television. Respondents were asked to rate the overall quality from 0 (no quality at all) to 100 (extremely good quality). The

stem-and-leaf display of the data is shown below.

Ste	em Leaves 3 2 6 4 0 3 4 7 8 9 9 9 5 0 1 1 2 3 4 5	-				
	6 1 2 5 6 6 7 1 7 8 9 3

A nurse measured the blood pressure of each person who visited her clinic. Following is a relative-frequency histogram for the systolic blood pressure readings for those people aged 25 to 40. Use the histogram to answer the question. The blood pressure readings were given to the nearest whole number.

63) Approximately what percentage of the people aged 25-40 had a systolic blood pressure reading of at least 110 but less than 120?

63) _____

- A) 15%
- B) 0.35%
- C) 3.5%
- D) 35%
- E) 30%
- 64) Approximately what percentage of the people aged 25-40 had a systolic blood pressure reading less than 120?

64) ____

- A) 15%
- B) 50%
- C) 35%
- D) 5%
- E) 3.5%
- 65) Given that 200 people were aged between 25 and 40, approximately how many had a systolic blood pressure reading less than 130?

65) ____

- A) 100
- B) 75
- C) 25
- D) 150
- E) 50

SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question. Provide an appropriate response.

66) The following frequency histogram provides average SO₂ (sulfur dioxide) emission rates from utility and industrial boilers (lb/million Btu) for 47 states (data for Idaho, Alaska, and Hawaii omitted).

data Abat you ge Sulfur Dioxide Emission Rates cannot get from this plot?

d. This histogram shows frequencies. If you were to construct a histogram using

a.

I dentify the intervals of emission rates used for

the plot. b.

Describe the shape of the distributi on. c.

What informati on can you get from the dot plot or stem-and -leaf plot of these

MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question.

67) The following is a partial histogram illustrating the final course grade distribution for an introductory level statistics class with 160 students. No student scored below 50. The grading scale is as follows.

ding Scale
A
В
C
D
F

The data for a grade of "D" is missing. What is the correct frequency for the grade of "D?"

- A) 10
- B) cannot be determined from the information given
- C) 0
- D) 16
- 68) The following is a partial histogram illustrating the final course grade distribution for an introductory level statistics class with 160 students. No student scored below 50. The grading scale is as follows.

Course Gra	ding Scale
90-99	A
80-89	В
70-79	С
60-69	D
50-59	F

67) __

The

- A) 5%
- B) 16%
- C) 10%
- D) cannot be determined from the information given
- 69) The following is a time plot of wine exports (in millions of gallons) in a certain country for the past 15 years. Is there a trend evident in the data?

- A) yes, decreasing trend
- B) no trend evident
- C) yes, increasing trend

69) __

70) ____

70) The following is a time plot of infant mortality rates in a certain country from the years 1960 to 2011. Is there an obvious trend in the data?

- A) yes, increasing trend
- B) yes, decreasing trend
- C) no trend evident
- 71) The following plot illustrates a time series of unemployment rates in a certain country between the years 1953 and 2012. Is a trend evident in the data set?

- A) yes, decreasing trend
- B) yes, increasing trend
- C) no trend evident

A graphical display of a data set is given. Identify the overall shape of the distribution.

72) A relative frequency histogram for the heights of a sample of adult women is shown below.

Which of the following best describes the shape of the distribution?

A) Skewed to the right

B) Skewed to the left

C) Bimodal

D) Symmetric

73) The following histogram depicts the heights of 50 women and 50 men.

72) ___

Which of the followin g best describes the shape of the distributi on?

- A) Skewed to the right
- C) Bimodal

- B) Symmetric
- D) Skewed to the left

74) ____

74) The ages of a group of patients being treated at one hospital for osteoporosis are summarized in the frequency histogram below.

Which of the following best describes the shape of the distribution?

- A) Bimodal
- B) Symmetric
- C) Skewed to the left
- D) Multimodal
- E) Skewed to the right
- 75) A stem-and-leaf diagram is given below for the ages of the patients at a hospital.

- 117) Use the following summary information for a data set of 100 observations to determine whether the data set is likely to be bell-shaped, skewed to the right or skewed to the left.

- A) skewed to the right
- B) unable to determine from the information given
- C) bell-shaped
- D) skewed to the left
- 118) The histograms below display the body fat percentages of 42 female students and 48 male students taking a college health course.

Do the female or male students have a larger standard deviation?

A) female students

- B) male students
- 119) Histograms are presented below for three different samples. To which of the samples does the empirical rule apply?

Histogram I

<u>Hist</u>

120) Three statistics classes (each of 50 students) took the same test. Shown below are histograms of the scores for the classes. Which class had the smallest standard deviation? Which class had the largest standard deviation?

120)

121) A competency test has scores with a mean of 69 and a standard deviation of 4. A histogram of the data shows that the distribution is normal. Use the Empirical Rule to find the percentage of scores between 61 and 77.

- A) 77%
- B) 95%
- C) 68%
- D) 99.7%
- E) 50%
- 122) SAT verbal scores are normally distributed with a mean of 433 and a standard deviation of 90. Use the Empirical Rule to determine what percent of the scores lie between 433 and 523.

122) _____

121) ____

- A) 34%
- B) 49.9%
- C) 51%
- D) 47.5%
- E) 68%
- 123) According to the Empirical Rule, approximately 95% of the data values from a bell-shaped standard deviations of the mean. distribution fall within

123) ____

- A) 3
- B) 2
- C) 2.5
- D) 1
- E) 0.5

SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question. Fill in the blank.

124) The is the difference between the largest and the smallest data values.

124)

MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question. Answer true or false.

125) The sum of the deviations, the differences between the observations and the sample mean

125) _____

- $\sum (x \overline{x})$, is always equal to zero.
 - A) True

B) False

Select the most appropriate answer.

126) Which of the following numerical summary measures cannot be negative?

126) ____

- A) z-score
- B) standard deviation
- C) mode
- D) Q3
- E) mean

SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question. Provide an appropriate response.

137) 1.The data below represent the number of inches of rain in Chicago, Illinois, during the month of April for 20 randomly selected years.

2.47	3.97	3.94	4.11	1.14
4.02	3.41	1.85	5.22	0.97
6.14	2.34	3.48	4.77	2.78
4.00	6.28	5.50	7.69	5.79

- a. Construct a box plot for these data.
- b. Describe the shape of this distribution.
- c. Compute and interpret the standard deviation.
- 138) The box plot below represents the volume of stock X traded for a random sample of 35 trading days. The volume of a stock is the number of shares traded on a given day.

a.

Approxi mately, what is the median for this dataset? b.

Are there any potential outliers in this dataset? If so, how many? c.

Describe the shape of the distributi on. Would the standard deviation or the interquar

tile

- 158) Possible answer: The graph is misleading because it is truncated. The scale on the vertical axis should start at zero so that the bars will be in the correct proportions. A part of the vertical axis could be omitted but the symbol // should then be used to warn the reader of the modified axis.
- 159) Possible answer: The average price increases by $^{25\%}$ from 2008 to 2009. Using the truncated graph, the price appears to double from 2008 to 2009 (i.e. it appears to increase by $^{100\%}$) Using the truncated graph, the differences between the bars seem bigger (relatively) than they really are.
- 160) Possible answer: The area of the television on the right is nine times (not three times) the area of the television on the left. The pictogram gives the visual impression that sales in 2012 were nine times the sales in 2002.
- 161) The bars are not drawn in the correct proportions.
- 162) The first graph shows the total numbers of students for each year as well as the number of female students. We can see the downward trend in overall enrollment, the slight upward trend in female enrollment and that female enrollment is small relative to total enrollment. However, with both total and female enrollment on the same graph, since female enrollment is small relative to total enrollment, the scale is not suitable for female enrollment and the upward trend in female enrollment is not very clear. This upward trend is much clearer from the second graph which shows female enrollment alone, However this graph gives no indication of how female enrollment compares to total enrollment.
- 163) The first graph shows the total numbers of students for each year as well as the number of female students. We can see the downward trend in overall enrollment, the slight upward trend in female enrollment and that female enrollment is small relative to total enrollment.
 - However, with both total enrollment and female enrollment on the same graph, since female enrollment is small relative to total enrollment, the scale is not suitable for female enrollment and the upward trend in female enrollment is not very clear.

Since both total enrollment and female enrollment are varying with time, the second graph which shows female enrollment as a percentage of total enrollment may be more useful. It is clear from this graph that as a percentage of total enrollment, female enrollment is increasing significantly. However, this graph gives no indication of the absolute number of students (overall or female) and without reference to the first graph, we cannot know whether the percentage female enrollment is increasing because female enrollment is increasing, because male enrollment is decreasing, or both.
