

Technology in Action, 14th Edition

Answer Key Chapter 2

Team Time

Data Storage Options

Students should be assessed on the following:

1. Research conducted on data storage option
2. Recommendations match the needs and goals of company and staff

	Needs improvement	Done Adequately	Done Well
Research on data storage options			
Students have identified the needs and goals of company and staff			
Students have outlined the benefits and disadvantages of various options, identified a solution or combination of solutions, and provided support for the recommendation			

Ethics Project

Green Computing

1. Students need to create and summarize a situation that involves green computing. The event/scenario should involve more than one character so that role-playing can take place.
2. Students need to create an outline to use during a role-playing event.
3. Students role-play the event using chat or other collaborative tools.

4. Students should present their case/experience to the class via PowerPoint or other method as determined by instructor.

	Needs improvement	Done Adequately	Done Well
Students need to create and summarize a situation that involves green computing.			
Students need to create an outline to use during a role-playing event.			
Students role-play the event using chat or other collaborative tools.			
Students should present their case/experience to the class via PowerPoint or other method as determined by instructor.			

Technology in Action, 14th Edition

Chapter 2

making the transition to...next semester

1. Watching Device Demos

YouTube is a great resource for product demonstrations. Open your browser, navigate to YouTube (youtube.com), and search on any type of computer peripheral discussed in this chapter to see if you can find a demonstration of a cool product. How helpful are these demonstrations? Make a video demonstration of a computing device you have and post it to your course management system or present it to your classmates (as specified by your instructor).

The videos on YouTube have made it a go-to site for students looking to learn more. If you ask students to evaluate a demonstration they watch on YouTube, they might respond by describing how helpful the video was, whether more than one brand was demonstrated, how old the video was, whether troubleshooting tips were included, and whether anything was left out that the students believed was important.

If you ask students to create a demonstration video, a word of caution is in order. If there is a desire to maintain privacy, allow students to create a video but don't penalize them for not uploading it to YouTube. For the content, think about what you would want to share with another future user about a device that you use regularly. What do you use it for and how has it benefited you? What do you wish was in the manual but wasn't there? Also, make sure that there is some uniformity and quality to creating the video, perhaps with everyone using the same type of recording device such as a digital recorder or a digital camera with video capability, and a tripod.

2. Communicating with the Computer

You're involved in many group projects at school. Between your work, your classes, and other outside responsibilities, you're finding it difficult to meet in person. Investigate the devices you would need to be able to have virtual group meetings.

To get students started, have them research the options for a new user of VoIP. In their analysis, consider these questions: What devices are needed? Do they need to purchase new equipment or do they have the capacity in their computer already? Does it require a lot of training to use or is it simple? Can free software be used? Will there be any monthly expense? How will this choice compare to other communication options?

Students can also perform an Internet search for "free video conferencing" and find several sites where their meetings can be hosted at no cost. Facebook offers networking options and Skype is another alternative. In addition, wiki sites and software such as

Google Docs give multiple users the capability to provide input on a single document. Devices needed include a camera and microphone.

3. **Ultrabook or Tablet**

You need a new computing device for school. Consider the following:

- a. Explain the differences between a tablet and an ultrabook.
- b. What advantages would an ultrabook provide you for your academic career?
- c. What advantages would a tablet (such as an iPad) provide to you in the classroom? At home?
- d. Which device do you think is better suited to your needs? Explain fully.

This is a great project for students, as they are often considering the purchase of new computing devices. Start the students off by getting them to focus on identifying their particular needs, since this is what should drive the choice of device. Perhaps in class, have students make a list of their needs and then complete the product research as homework. Typical factors students consider are: product weight, battery life, connectivity options, compatibility with existing systems/devices, screen size, storage capacity (although less so with cloud storage solutions becoming popular). Students often cite the need to record lectures with these devices.

making the transition to...the workplace

1. **Backing Up Your Work**

You've embarked on a position as a freelance editor. You'll be using your own computer. Until now, you haven't worried too much about backing up your data. Now, however, it's extremely important that you back up all your work frequently. Research the various backup options available, including online backup services, external hard drives, and portable flash storage. What are the size limitations of each? What are the initial and ongoing costs of each? How frequently do the options allow you to perform backups? Which option would you choose, and why?

Losing data creates a horrible situation. Yet many users take for granted that technology will always do what we need it to do when we need it to work. What types of precautions would students take to ensure their personal files are protected and what would they do to keep their work files protected? Students' answers may vary, but should include a discussion about the various storage options available, including portable options such as flash storage, external storage devices, and online or cloud-based services. Students should discuss the pros and cons of each method, including cost and storage space limitations. Is this something students can do without an expert or will additional tech support fees be incurred? What are the best case scenarios for retrieving lost data and how often should data be backed up?

2. What Hardware Will You Use?

When you arrive at a new position for a company, your employer will most likely provide you with a computer. Based on the career you're in now or are planning to pursue, answer the following questions:

- a. What kind of computer system would the company mostly likely provide to you—desktop, laptop, tablet PC, or something else? How does that compare with the type of system with which you prefer to work?
- b. If you were required to use a type of computer you'd never used before (such as a Mac instead of a PC), how would you go about learning to use the new computer?
- c. What other devices might your employer provide? Consider such items as smartphones or peripherals such as printers. How important is it for these devices to conform to the latest trends?
- d. Should you be able to use employer-provided equipment, such as a smartphone, for personal benefit? Does your answer differ if you have to pay for part or all of the device?

Responses will vary, depending on career choice and individual preferences. What do individuals in this career typically use? For example, a graphic designer might own a laptop but use a large monitor or multiple monitors with a desktop computer. If you are moving into sales, you might use a tablet or an ultrabook. What is your preference?

It can be difficult to begin using a program or operating system that is different from what you are accustomed to using. Yet, it is easier to learn to use a computer now than it used to be, and likewise it should be even easier in the future. Think about sources for tutorials for the various operating systems. Are there videos on YouTube or from the manufacturer that you can use to learn? How do you best learn: watching and then doing, reading and then doing, or trying first instead?

Employees should not take advantage of the employer. What guidelines would be reasonable for personal use of equipment provided by the employer?

Technology Wish List

You are in need of a significant technology upgrade, and your parents have told you they will help you finance your purchases by loaning you the money. You will need to repay them with a modest 2.5% interest rate over two years. The only catch is that they want you to create a list of all the new devices that you need, note the cost, and provide a website for each device where they can find more information. Then, they want you to calculate how much you will need to give them each month to pay them back.

You will use the following skills as you complete this activity:	
• Merge and Center	• Modify Column Widths
• Modify Workbook Themes	• Insert a Hyperlink
• Apply Number Formats	• Create a Formula
• Use the SUM, PMT, and COUNTA Functions	• Wrap Text

Instructions:

1. Open *TIA_Ch2_Start* and save as **TIA_Ch2_LastFirst**.
2. Format the title in cell A1 with the **Title Cell Style**, and format the column headers in cells A3:F3 with the **Heading 3 Cell Style**.
 - a. Hint: To format cell styles, on the Home tab, in the Styles group, click Cell Styles.
3. **Merge and Center** A1 across columns A through F, and **Center align** the column

headers in **cells A3:F3**.

- a. Hint: To Merge and Center text, on the Home tab, in the Alignment group, click Merge & Center.

4. Modify column widths so that Column A is **25** and Column D is **45**.

- a. Hint: To modify column widths, on the Home tab, in the Cells group, click Format, and then select Column Width.

5. In **cells B4:F9**, fill in the table with the Brand and Model of the six devices that you would like to purchase. The device type is filled out for you. In the *Reason* column, write a brief note as to why this device will help you. (You'll format the text so it all displays later.) Enter the cost of the device in the Cost column. Don't include tax and/or shipping.

6. Change the Workbook Theme to **Integral**.

- a. Hint: To apply the Theme, on the Page Layout tab, in the Themes group, click Themes.

7. In **cells F4:F9** create a **Hyperlink** to a webpage that features each respective product so your grandparents can have access to more information if they need it. Ensure that each hyperlink includes the URL to the exact webpage for the device in the Address, but displays the Make/Model of the device in the worksheet.

- a. Hint: To insert a hyperlink, on the Insert tab, in the Links group, click Hyperlink.
In the Insert Hyperlink dialog box, enter the URL in the Address: box and enter the Make/Model in the Text to display box.

8. **Wrap the text** in **cells C4:C9, D4:D9, and F4:F9** so all text displays.

- a. Hint: To wrap text, on the Home tab, in the Alignment group, click Wrap Text.

9. Format the values in **cells E4:E9** with the **Accounting Number format with two decimals**.
- a. Hint: To apply number and decimal formats, look on the Home tab, in the Number group.
10. In **cell A10**, type **Subtotal**, then in **cell E10** use a **SUM function** to calculate the total cost of all devices. Format the results in the **Accounting Number format with two decimals**.
11. In **cell A11**, type **Estimated Tax**, then in **cell E11** create a formula that references the subtotal in cell E10 and multiplies it by a tax of 6%. Format the results in the **Accounting Number format with two decimals**.
- a. Hint: The formula will be `=E10*0.06`
12. In **cell A12**, type **Estimated Shipping**, then in **cell E12** create a formula to calculate the shipping charge by using the **COUNTA function** to determine the number of devices being purchased and then multiplying that by a \$10 shipping charge. Format the results in **Accounting Number Format with two decimals**.
- a. Hint: The formula will be `=COUNTA(B4:B9)*10`.
13. In **cell A13**, type **Total Cost**, then in **cell E13** use the **SUM function** to create a formula that adds up the *Subtotal*, *Estimated Tax*, and *Estimated Shipping costs*. Format the results in **Accounting Number Format with two decimals**. Format the cells A13:E13 with the **Total Cell Style**.
14. **Right align** cells A10:A13.
15. In **cell D14**, type **Estimated Monthly Payment**, and then in **cell E14**, use the **PMT function** to calculate the monthly payment owed to your parents to pay back the total

purchase amount in two years at a 2.5% annual interest rate.

Hint: The formula will need to adjust the annual interest rate to a monthly rate, and adjust the annual term of the loan to monthly payments.

16. Save the workbook and submit based on your instructor's directions.

Chapter 2 Quiz // Assessment

multiple choice

<OBJECTIVE 2.1>

1. Which of the following functions of a computer is mostly responsible for turning data into information?
 - a. processing
 - b. storage
 - c. input
 - d. output

<OBJECTIVE 2.2>

2. In a computer, each _____ can represent one letter, number, or symbol.
 - a. bit
 - b. byte
 - c. integrated circuit
 - d. megabyte

<OBJECTIVE 2.3>

3. A(n) _____ is a laptop computer that can convert into a tablet-like device.
 - a. ultrabook
 - b. Chromebook
 - c. 2-in-1 PC
 - d. all-in-one PC

<OBJECTIVE 2.4>

4. Touch-screen devices usually feature _____ keyboards.
 - a. physical
 - b. laser-projection
 - c. optical
 - d. virtual

<OBJECTIVE 2.6>

5. All of the following are sensors found in certain smartphones EXCEPT
 - a. hygrometer.
 - b. accelerometer.
 - c. magnetometer.
 - d. barometer.

<OBJECTIVE 2.14>

6. Ergonomics is an important consideration
 - a. only for desktop computers.
 - b. only for laptop computers.

- c. only for laptop and desktop computers, but never for mobile devices.
- d. for all computing devices.

<OBJECTIVE 2.7>

7. The most common output device for soft output is a
- a. laser printer.
 - b. display screen.
 - c. inkjet printer.
 - d. scanner.

<OBJECTIVE 2.8>

8. _____ printers work by spraying tiny drops of ink onto paper.
- a. Laser
 - b. Cloud-ready
 - c. Inkjet
 - d. Large format

<OBJECTIVE 2.12>

9. The fastest computer port is the _____ port
- a. USB
 - b. Thunderbolt
 - c. expansion
 - d. WiFi

<OBJECTIVE 2.13>

10. Which component of a computing device drains the battery the fastest?
- a. display screen
 - b. hard drive
 - c. WiFi adapter
 - d. Bluetooth adapter

true/false

- 1. Data and information are interchangeable terms. <False (OBJ 2.1)>
- 2. RAM is nonvolatile storage. <False (OBJ 2.9)>
- 3. SSD drives are superior to conventional disk drives because they have no moving parts.
<True (OBJ 2.11)>
- 4. A touch pad is a pointing device usually found in tablets. <False (OBJ 2.5)>
- 5. The “brain” of the computer is the CPU. <True (OBJ 2.10)>

Check Your Understanding // Review & Practice 2.1

multiple choice

<OBJECTIVE 2.1>

1. Which of the following is one of the four major functions of a computer?
 - a. indexing
 - b. verification
 - c. processing
 - d. handling

<OBJECTIVE 2.3>

2. Which of the following statements is TRUE?
 - a. All cell phones are now smartphones.
 - b. Smartphones are considered a type of computer.
 - c. Smartphones do not contain a CPU.
 - d. Smartphones have more computing power than desktop computers.

<OBJECTIVE 2.4>

3. Which of the following can be both an input device and an output device?
 - a. mouse
 - b. keyboard
 - c. display screen
 - d. laser printer

<OBJECTIVE 2.7>

4. The number of pixels that can be displayed on the screen at one time is known as what?
 - a. screen resolution
 - b. viewing angle
 - c. color depth
 - d. pixel density

<OBJECTIVE 2.8>

5. What type of printer heats toner to adhere it to the paper?
 - a. inkjet
 - b. impact
 - c. 3D
 - d. laser

Check Your Understanding// Review & Practice 2.2

multiple choice

<OBJECTIVE 2.9>

1. Which of the following is NOT found on a motherboard?
 - a. RAM
 - b. CPU
 - c. sound card
 - d. hard drive

<OBJECTIVE 2.10>

2. Which of these is considered the “brains” of the computer?
 - a. USB
 - b. ROM
 - c. RAM
 - d. CPU

<OBJECTIVE 2.11>

3. Which of these is an example of optical storage media?
 - a. DVD
 - b. SSD
 - c. thumb drive
 - d. a flash memory card

<OBJECTIVE 2.12>

4. Which of the following is NOT a port?
 - a. HDMI
 - b. CPU
 - c. USB
 - d. Thunderbolt

<OBJECTIVE 2.13>

5. Which power control option performs a warm boot?
 - a. Restart
 - b. Sleep
 - c. Log off
 - d. Shut down

Chapter 2 Make: A Mobile App

Getting to Know App Inventor

App Inventor is a web-based tool for creating mobile apps for Android devices. In this exercise, you'll explore the App Inventor tool and begin working with your first app.

When using App Inventor (on a PC) to build an app, it is very helpful to have an Android device connected to the same wireless network as the PC. This allows you to see changes to your app live on the Android device as shown in the videos below:

Before You Start

For this exercise, you'll need the following:

HARDWARE

1. A computer connected to a WiFi network
2. An Android device (phone or tablet) that is connected to the same WiFi network as the computer. (**Note:** If you don't have an Android device, you can instead work with the emulator in App Inventor. A "phone" will appear on the screen and show what your app will look like running on a phone screen. For information on setting up the emulator, follow these instructions: <http://appinventor.mit.edu/explore/ai2/setup>)

SOFTWARE

3. The Chrome browser (free and available at <https://www.google.com/intl/en-US/chrome/browser/>)
4. A Google account (free and available at <https://accounts.google.com/signup?service=mail>). A Google account will work for all Google services like Gmail, Maps, and Google Play.
5. The MIT AI2 Companion app (free and available at Google Play). Make sure to download the *latest* version onto your Android device.

Working with Your First App

It's a tradition in programming to make the first program you write in a new language print "Hello, World" on the screen. For App Inventor, the first program everyone sees is Hello Purr. In this exercise, you will set up your app inventor account and explore the Hello Purr app.

1. Navigate to <http://ai2.appinventor.mit.edu>. If you've never logged into App Inventor before, you'll be asked to sign in with your Google Account:

The image shows the Google sign-in page. At the top is the Google logo. Below it is the text "One account. All of Google." and "Sign in with your Google Account". The sign-in form includes a profile icon placeholder, a text input field containing "collegestudentmc3", a password input field with dots, a blue "Sign in" button, a checkbox for "Stay signed in", and a link for "Need help?". Below the form is a link for "Create an account". At the bottom is the text "One Google Account for everything Google" followed by icons for various Google services. Two green callout boxes with arrows point to the input fields: "Enter your Google account name" points to the username field, and "Enter your Google account password" points to the password field.

Google

One account. All of Google.

Sign in with your Google Account

collegestudentmc3

.....

Sign in

☒ Stay signed in [Need help?](#)

[Create an account](#)

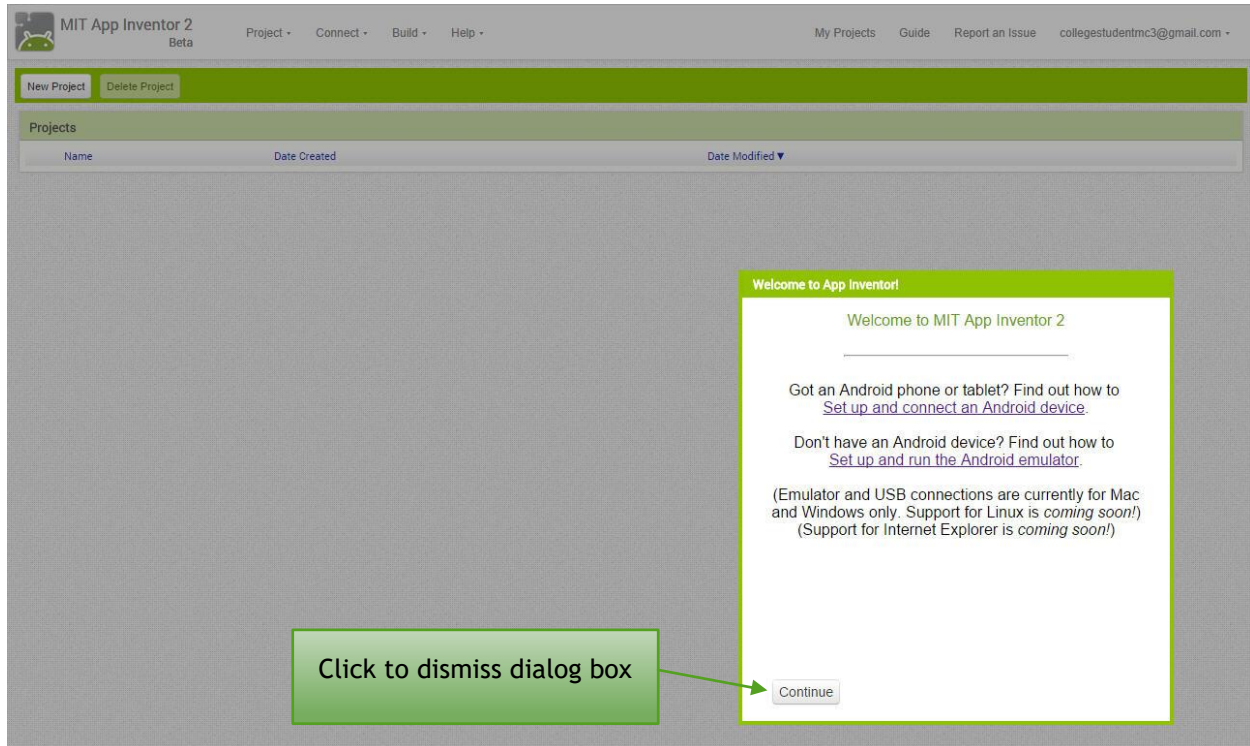

One Google Account for everything Google

Enter your Google account name

Enter your Google account password

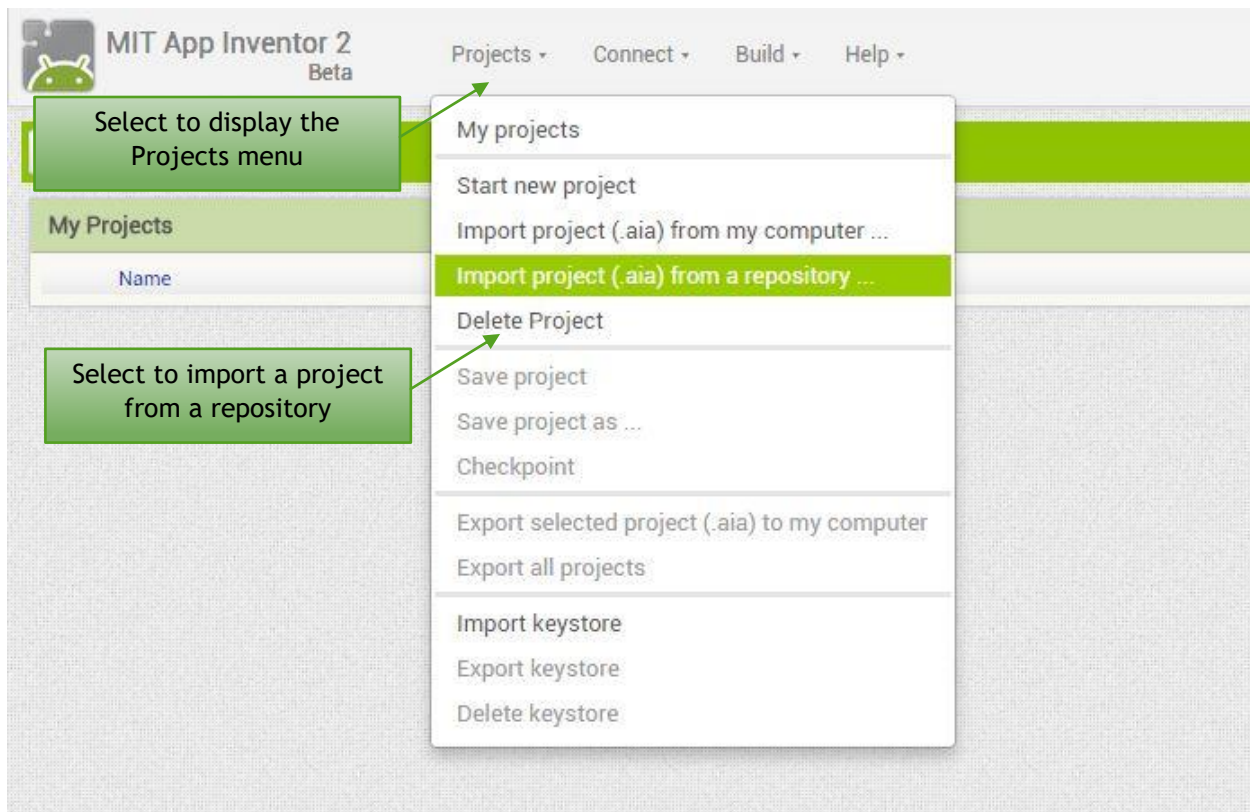

2. Enter your Google account name and password, and allow App Inventor access to your Google account. You'll only be asked to do this the first time you access your account. You will be asked to agree to the Terms of Service (you must accept the terms of service to use App Inventor) and you may be asked to take a voluntary survey.

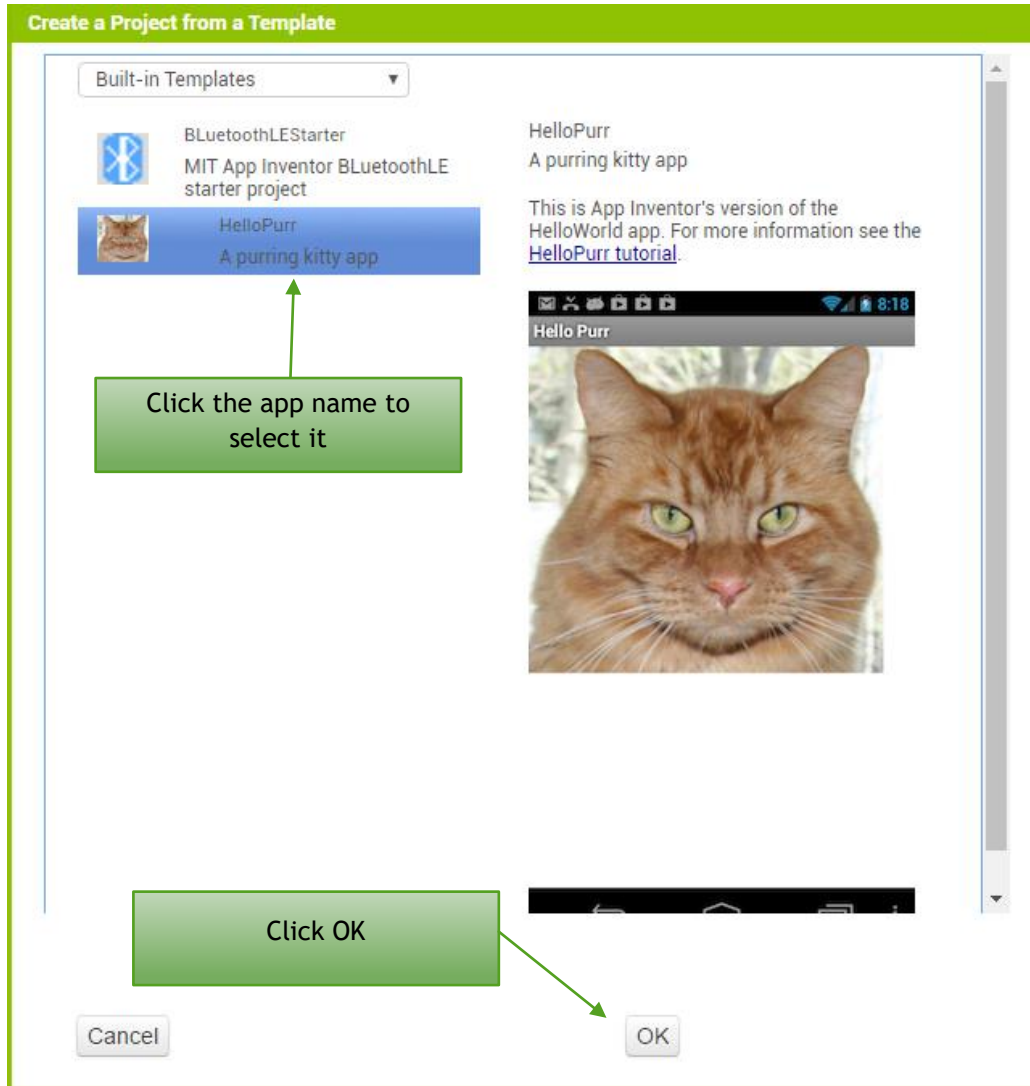

3. Click the **Continue** button to dismiss the Welcome to App Inventor dialog box. Your screen should now look like this:

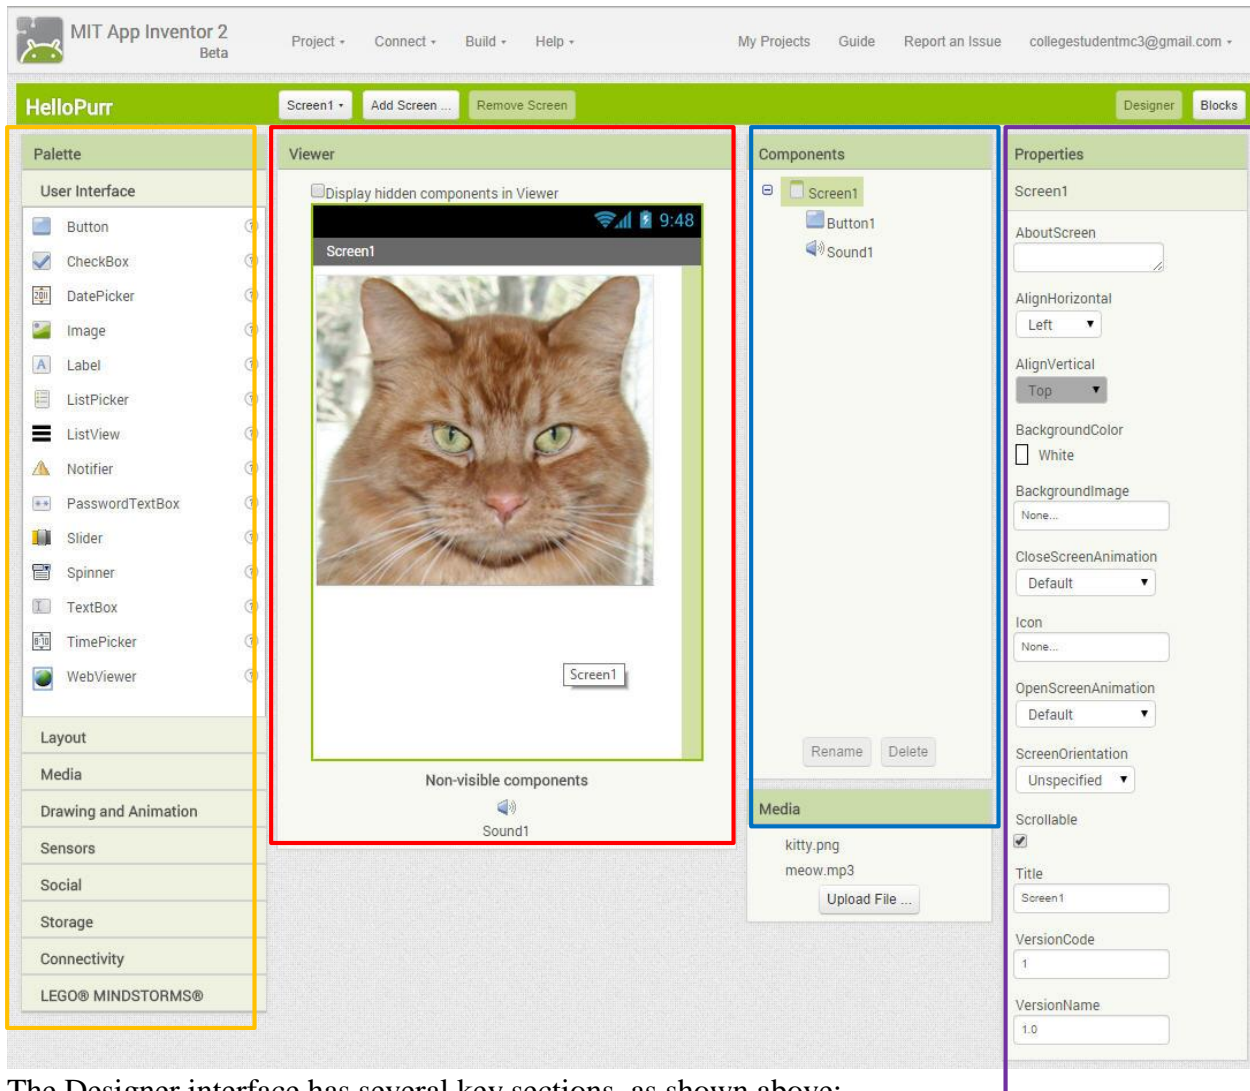

4. At the top of the screen, click **Projects** to display the Projects drop-down menu. From the Projects menu, select **Import Project (.aia) from a repository**. This will display the Built-in Templates screen.

5. Select the **HelloPurr** template from the list in the Built-in Templates group (**Note:** At the time this document was constructed, only two templates were available. You may see additional templates listed.)
6. Click **OK** to load the HelloPurr template into AI2.

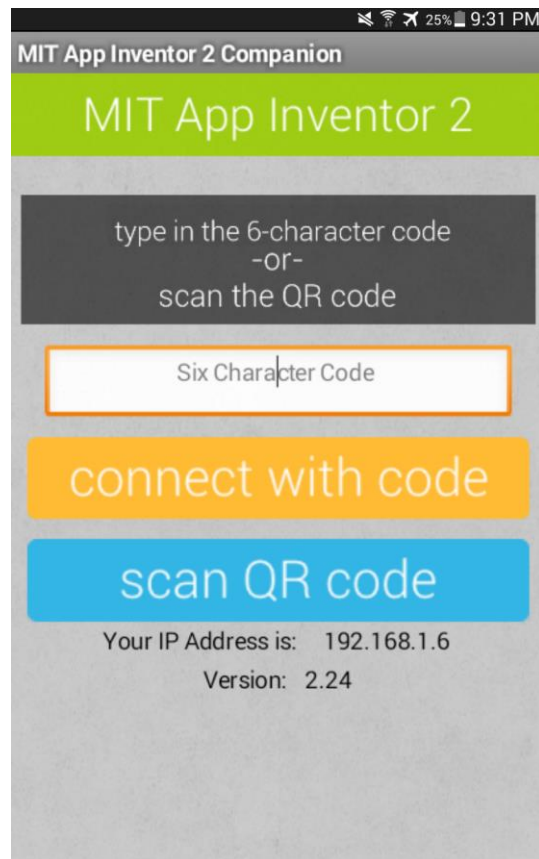

The Designer interface has several key sections, as shown above:

- **Palette:** This section contains the components you'll use to build apps.
- **Viewer:** This section shows the components that have been added to the app.
- **Components:** This section lists all screens in the app, plus the components on each screen. Selecting a screen or component displays the properties for that element in the Properties section.
- **Properties:** This section lists all properties of the element currently selected in the Components section.

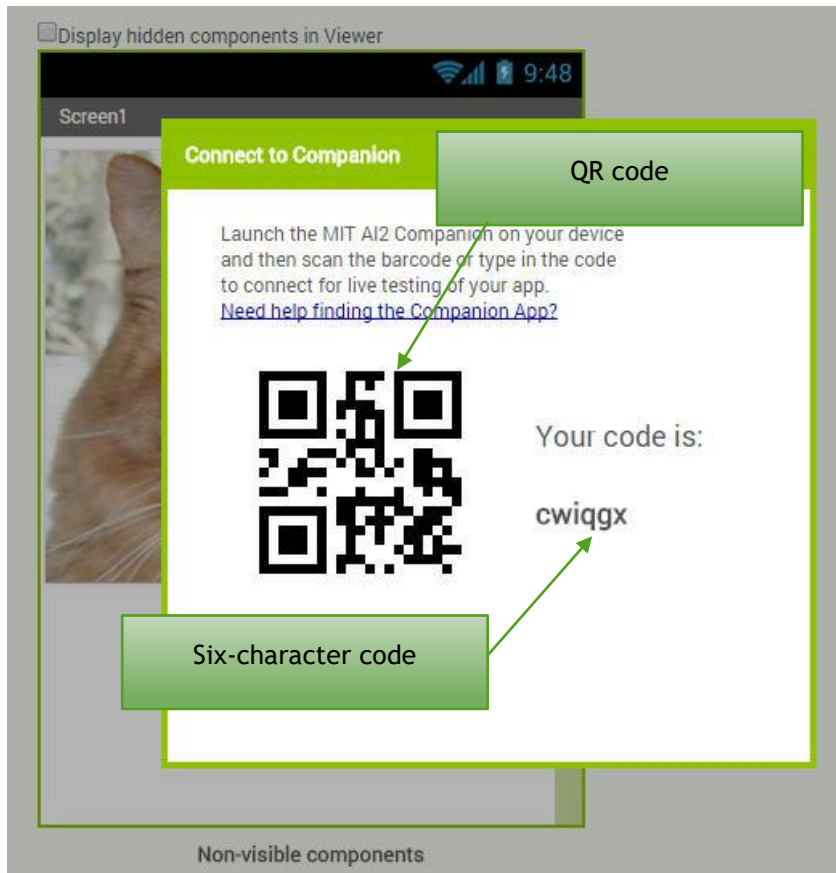

7. Next you need to connect App Inventor and your Android device. Turn on your Android device and launch the AI Companion app.  You should see a screen on your Android device that looks like this:

8. On your computer, in App Inventor, click the **Connect drop-down arrow** from the menu at the top of the screen, then click **AI Companion** from the drop-down menu. This launches the Connect to Companion dialog box. (**Note:** If you don't have an Android device, click *Emulator* from the drop-down menu.)

9. Click the button **scan QR code** on your device and hold it so the QR code on your computer screen is in focus. Wait for the two to synchronize. (**Note:** You can also just type the six-character code into the Six Character Code box in the Companion app on your Android device, and then press the orange **connect with code** button.)

If you successfully connected, the Connect to Companion dialog box should disappear, and the screen on your Android device (or the emulator screen) should now display the HelloPurr app, as shown below:

10. Now take some time to play with your device and see what the app does. Does it make noise? Does your device vibrate (**Note:** the emulator will not vibrate and neither will some tablets.)?

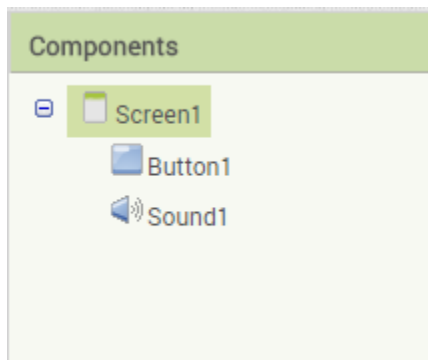

Behind the App

Now that you have loaded the HelloPurr app and played with it, let's examine how the HelloPurr app was designed. We will now explore the AI2 interface to familiarize you with its different components.

User Interface

1. Navigate to the Components window. There you see the HelloPurr app uses one screen. That screen has:

- Button1
- Sound1

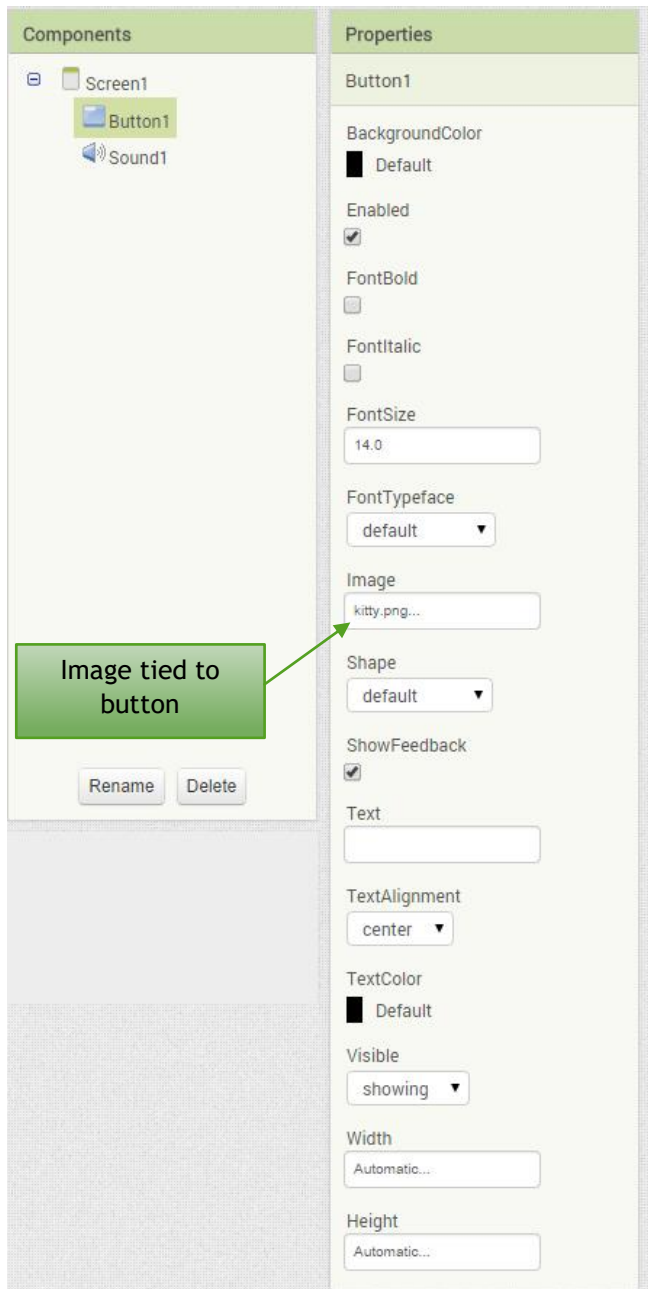

2. Navigate to the Media window, which shows that there are two files uploaded:

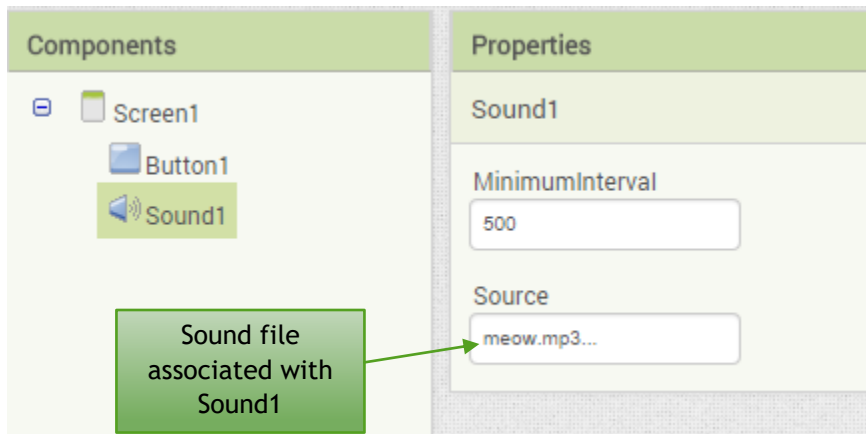

- the image **kitty.png**
- the sound **meow.mp3**

3. In the Components window, click **Button1** to select it. The Properties window shows all the details of that Button. Notice the Button has an image tied to it, kitty.png.

4. In the Components window, click **Sound1** to select it. The Properties window shows it has a Source file associated with it, meow.mp3.

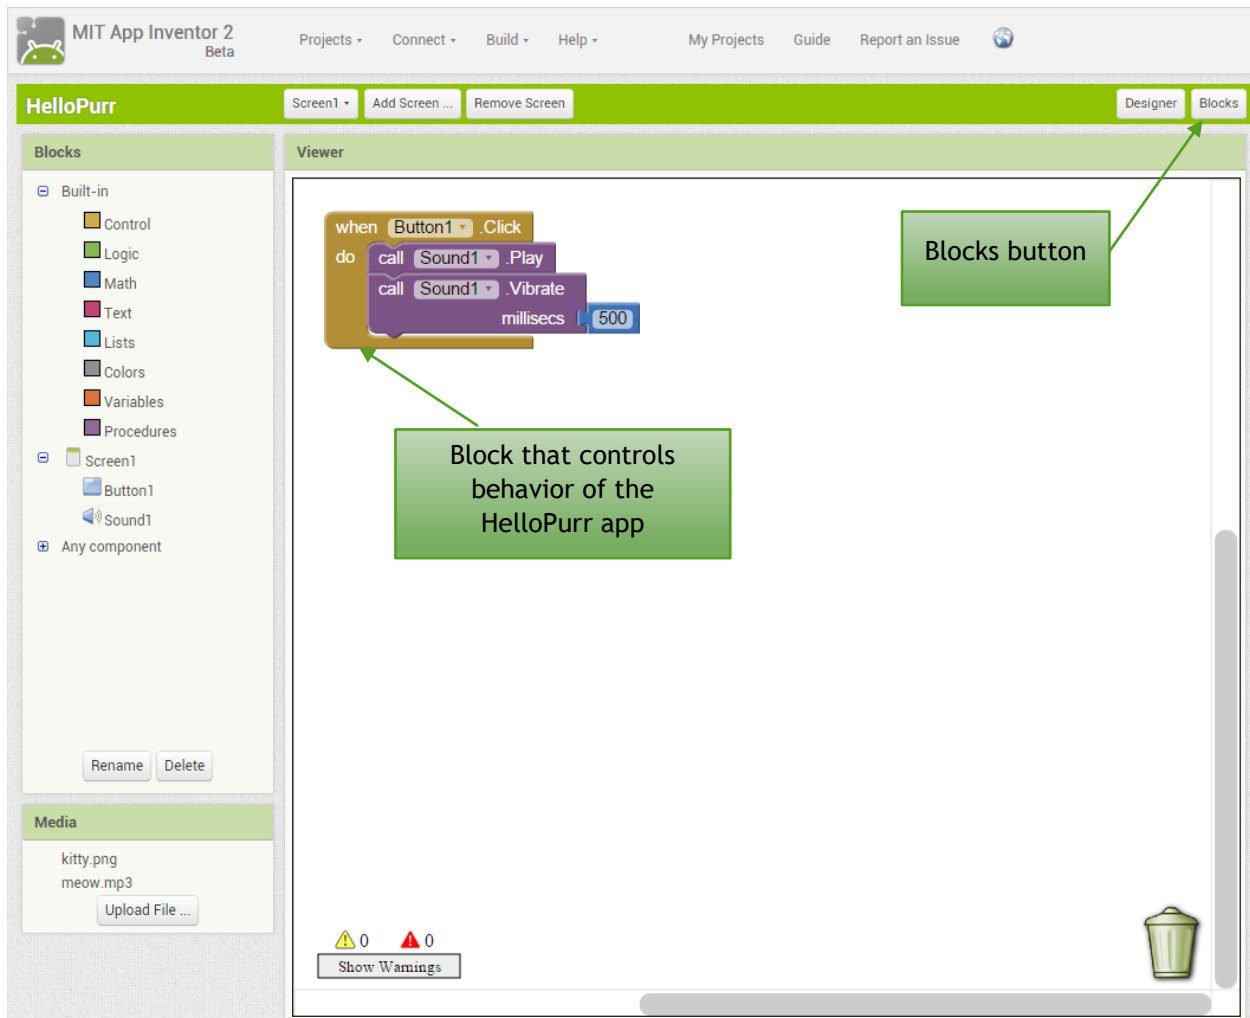

Note: As you make changes to the app in the AI2 user interface on your computer, the app will update automatically on your Android device (or in the emulator).

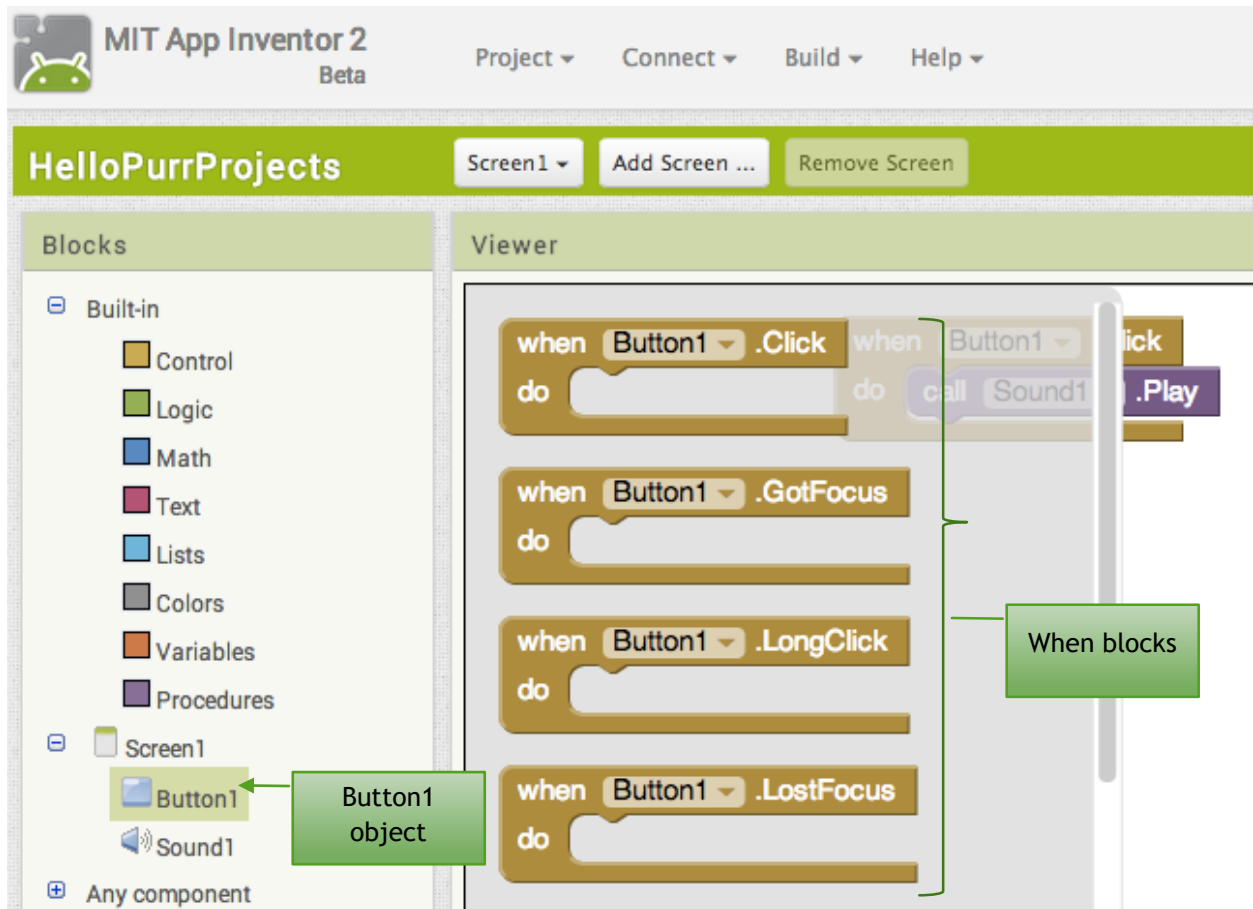

Behavior (Blocks Screen)

Now let's examine how the HelloPurr app is programmed. We will explore the Blocks view to see what is happening.

1. In the upper-right corner of the AI2 screen, click the **Blocks** button. This switches you to the Blocks view, which enables you to control the behavior of the app. **Blocks** are representations of programming code built into App Inventor. They make it possible for you to assign actions to components of your app without knowing the details of a complex programming language.

2. In the Blocks palette, click the **Button1** object. This opens the “drawer” of blocks that control the button’s behavior.

The **when blocks** are gold in color and are tied to actions the user may take. **Note:** There are other types of blocks, but we won't deal with them until future exercises.

The HelloPurr app uses the event block “when Button1.Click” (as shown below). This block controls what happens when a user presses Button1 (the picture of the cat) when the app is running. When Button1 is clicked, the Sound1 object is told to play the source file associated with it and the device will vibrate for 500 milliseconds (like a cat purring).

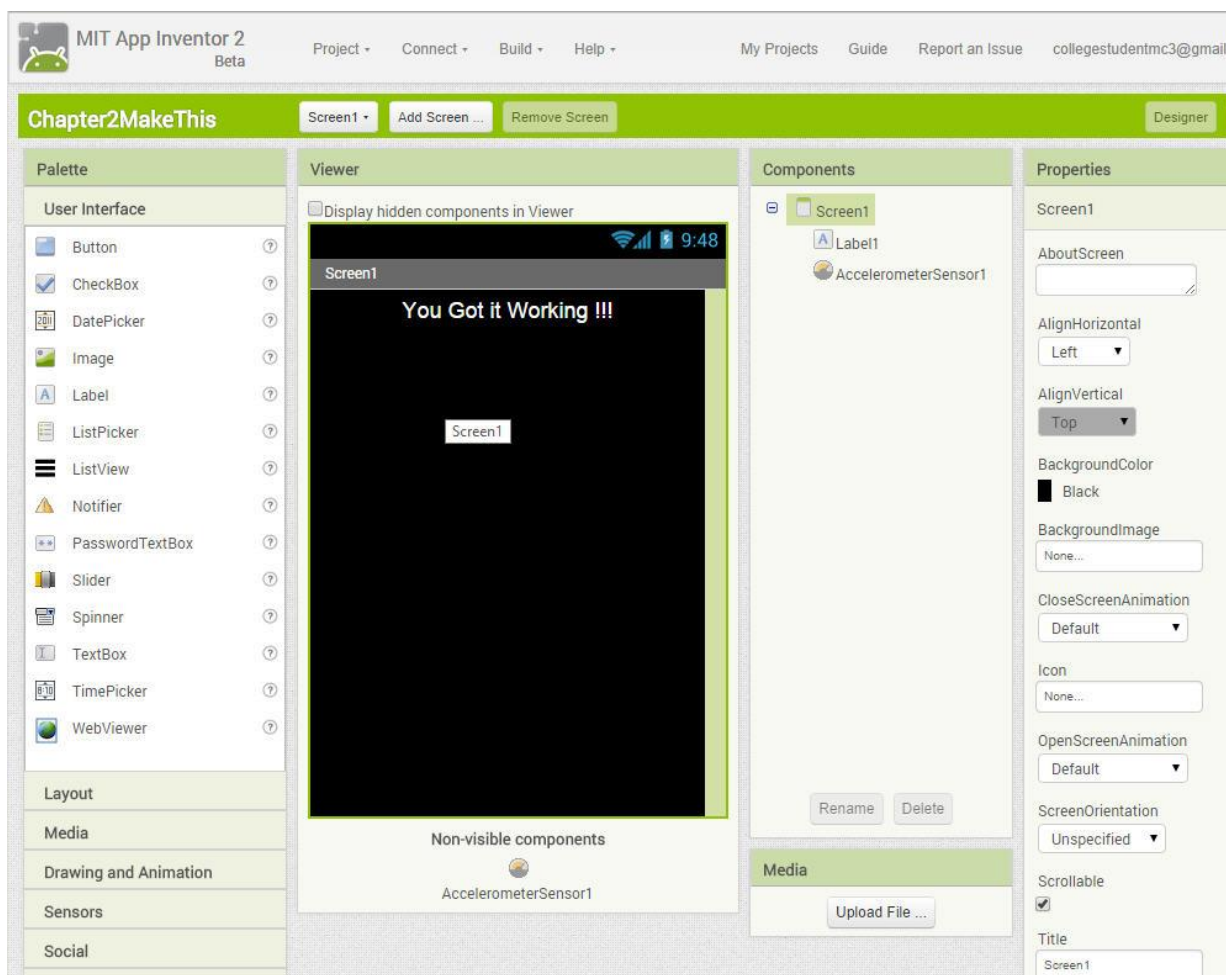

This is the basic pattern for all mobile apps you'll create with App Inventor:

- Design the user interface
- Decide which actions are important (pressing a button, select an item from a list, etc.)
- Program the behavior with blocks

A Mystery App

We have created a mystery app for you to explore. (**Note:** This app requires actions that are not supported in the emulator).

1. Download the file **Chapter2MakeThis.aia** from MyITLab and save it to your computer.
2. On the App Inventor menu, click **Connect->Reset Connection**.
3. Click **Projects->Import project (.aia) from my computer** and click the **Choose File** button. Navigate to the folder where you saved the Chapter2MakeThis.aia file and select it.
4. Click the **OK** button to load the app into App Inventor. Your screen should look like this:

5. Launch the AI companion app on your Android device.

6. On the App Inventor menu, click **Connect->AI Companion** and connect to your Android device. Enter the code either by typing or by scanning the QR code. Your device should look like this:

7. Now play with your device. Move it around. Shake it. What is changing? When are things changing? What kind of blocks might be behind this?
8. When you have an idea of what is happening, open the Blocks view and examine the code. Were you correct?
9. Try making some modifications or adding new behaviors. For example, try going to Designer view and adding a Text to Speech component (found in the Palette pane under the Media category) and a Text Box (in the User Interface category) and then using those to extend what the app can do (make the picture say the phrase typed in the text box by the user when the picture is touched).

Now that you know the basics of the App Inventor programming interface and how to connect an Android device to it, you can begin building your own apps!

Extensions to This Project

1. Take a “selfie” and modify the HelloPurr app to use your picture as the button image instead of the cat image.
2. Record your voice saying something clever. Upload this sound file to the HelloPurr app and tie that sound to the button. Your picture will now have your voice!
3. Add a text to speech component to the HelloPurr app. Enable the user to type in the phrase that will be spoken when the picture button is pressed.

Chapter 2: Looking at Computers: Understanding the Parts

Android: <https://www.android.com>. A customizable OS that powers a variety of devices from phones and tablets to watches, and more.

App Inventor: <http://www.appinventor.org/>. A site that offers a course taught by USF Professor David Wolber through which students of all ages can learn how to invent and program an app within hours.

Apple: www.apple.com. Information about Apple's macOS, iOS, iPhone, Watch, iPad, iPod, and iTunes, as well as information about Mac computers such as MacBook Air or iMac.

Apple AirPrint: www.apple.com. Click the Search icon, then search for AirPrint and select from the list of articles.

Apple Siri: www.apple.com. To locate information on Siri, click on the Search icon, type Siri in the search text box, and then press Enter. An iOS personal assistant for the iPhone, iPod, and iPad that allows users to access the Internet and other features by voice command.

ASUS ZenBook: www.asus.com/US/. A light, thin, laptop built with a stronger laptop alloy. The ZenBook does not have a CD/DVD drive, but does have USB-C 3.1, USB 3.0, HDMI, VGA, RJ45 LAN, and 3-in-1 SD card reader ports.

AT&T: www.att.com. The official site for AT&T, where users can purchase a phone, phone service, and other services.

Blackle: www.blackle.com. An energy saving search engine created by Heap Media and powered by Google Custom Search. Using a black screen saves energy since backlit LCDs do not light up the area of the screen that is black.

Bluetooth: bluetooth.com. This is the official site for Bluetooth technology.

Computer Ethics Institute: computerethicsinstitute.org. This site provides information on ethical issues associated with the advancement of information technologies in society.

Consumer Reports: www.consumerreports.org/cro/index.htm. Expert reviews on thousands of consumer products are included here.

Dragon NaturallySpeaking: <http://www.nuance.com/dragon/index.htm?ref=discoverlist>. Software by Nuance that allows users to dictate content into a computer.

Dropbox: www.dropbox.com. This free service lets users easily share and bring photos, documents, and videos anywhere.

Epson: www.epson.com. A site that provides access to learn about and purchase Epson products, including printers, ink, projectors, scanners, and more.

Google: www.google.com. A free online search utility.

Google Cloud Print: <https://www.google.com/cloudprint/learn/>. New technology that connects printers to the web allowing you to print from your phone, tablet, PC, or other web-connected devices.

Google Chromebook: <https://www.google.com/chromebook/>. A computer that uses Google Chrome OS.

Google Drive: <http://drive.google.com/>. A personal drive offered by Google with at least 15 GB of free storage space. The drive can be accessed on the web, on a mobile device, or on a computer.

Google Hangouts: <https://hangouts.google.com/>. An online video app that makes it easy to send messages, make voice and video calls, or videoconference with multiple people. This link may have to be copied and pasted into the browser address bar.

Google Maps: www.google.com. Click the Google Apps button in the top right corner, and then click Maps. Google Maps uses GPS to allow users to navigate from one location to another or find a specific location such as a gas station, restaurant, or store.

Google Now: <https://www.google.com/search/about/>. Google's intelligent personal assistant responds to voice commands to perform various tasks.

HP: www.hp.com. The official site for HP products.

Intel: <http://ark.intel.com/>. A site that provides information about different computer processors.

Kodak: www.kodak.com. A site that provides hardware, software, and services to the graphic arts, commercial print, publishing, entertainment, and consumer product markets.

Lenovo: www.lenovo.com. A site that provides access to purchase Lenovo laptops, desktops, tablets, and accessories. The Lenovo Yoga is a laptop with a hinge that enables users to fold the keyboard behind the screen and use the monitor as a tablet.

LG: <http://www.lg.com/us>. A site that provides access to purchase LG products.

Microsoft Corporation: www.microsoft.com. Information about Microsoft software, hardware, and operating systems such as the Office Suite, Microsoft Surface, and Windows 10.

Microsoft Cortana: <http://windows.microsoft.com/en-us/windows-10/getstarted-what-is-cortana>. Personal assistant software that manages your calendar, tracks packages, finds files, and even chats with you.

Microsoft Excel: <https://products.office.com/en-us/>. Click Products on the red menu bar, and below Applications, click Excel. The spreadsheet application Microsoft bundles with Microsoft Office.

Microsoft OneDrive: www.onedrive.com. Cloud-based file storage and sharing, as well as free access to Microsoft Office Web Apps.

Microsoft Windows 10: <https://www.microsoft.com/en-us/windows/features>. Learn more about Windows 10 and take a video tour of the new Windows features.

MyFitnessPal: <https://www.myfitnesspal.com/>. An app that counts calories and captures data using the cell phone camera to scan UPC codes on food products.

Panono: www.panono.com/home. The Panono 360° has 36 fixed-focus cameras that take 36 single images. Images are uploaded to the Panono cloud where they are automatically stitched together for a 360° panoramic image.

PlayStation: <http://us.playstation.com>. This site provides information about PlayStation systems and games.

Pokémon Go: <http://www.pokemon.com/us/>. The official site for the Pokémon Go game.

R.A.T. Pro X Precision Gaming Mouse: <http://www.madcatz.com/>. This precision engineered mouse provides the ability to customize the mouse and reduces fatigue while playing marathon gaming sessions.

Rock Band: www.rockband4.com. Click GEAR in the menu bar to learn more about Rock Band controllers.

Samsung: www.samsung.com. This site provides access to purchase Samsung products.

Skype: www.skype.com. This site provides Voice over Internet Protocol (VoIP) service for users to make free phone calls over the Internet.

Square: <https://squareup.com/>. A magstripe reader that allows retailers to accept credit cards anywhere using Apple and Android devices.

Sunway TaihuLight: <https://www.top500.org/system/178764>. This site provides detailed information about the world's fastest supercomputer.

theSkyNet: www.theskynet.org. An organization that uses software to tie individual computing devices to a grid to process astronomical data during times when individual CPUs are idle or not working to their full capacity.

TOP500.org: www.top500.org. A project that started in 1993 to provide a ranking for the top 500 supercomputers' abilities to solve a linear set of equations.

U.S. Department of Defense: <http://www.defense.gov/>. The official government site for the U.S. Department of Defense.

Verizon: www.verizon.com. Verizon offers wireless devices, accessories, and mobile plans, as well as residential and business solutions for Internet, TV, and phone services.

Wake Forest Institute for Regenerative Medicine: <http://www.wakehealth.edu/WFIRM>. A research facility that specializes in engineering laboratory-grown organs and replacement tissues to cure rather than treat disease.

Wii U: <http://www.nintendo.com/>. A game console by Nintendo. Click Wii U in the menu bar.

Xbox: www.xbox.com. This is the official Xbox site with information about Xbox systems and games.

ADDITIONAL LINKS

4AllMemory: www.4allmemory.com. Find the memory to upgrade your computer.

AAXA Technologies: <http://www.aaxatech.com/>. This site offers digital projectors for business and education.

BBC Future: <http://www.bbc.com/future/story/20150310-are-you-over-connected>. This article discusses whether individuals are over-connected to digital media.

CalRecycle: www.calrecycle.ca.gov/electronics/whatisewaste/. Click Electronic Waste below Where Do I Recycle... This site defines e-waste and provides links to more information about electronic waste recycling.

Celluon: <http://www.celluon.com/>. A technology company that manufactures a product that projects a laser image of a keyboard onto a flat surface and detects the motion of fingers during typing.

Computer History Museum: www.computerhistory.org. This site presents a history of how computers really started and how far they have come since their invention.

Ergonomics: <http://ergonomics.org/>. This site provides information on ergonomics and the importance of having an ergonomically designed work place.

Good Clean Tech: www.goodcleantech.pcmag.com. This site provides news, tips, advice, and ideas about how to do more with less. With the help of the editors and analysts at *PC Magazine*, this site highlights companies that have committed to using better ecotechnologies.

Google Documents: docs.google.com. Google's web-based application suite and data storage service that enables users to create documents while collaborating in real-time with other users.

Leap Motion: www.leapmotion.com. Leap Motion has developed technology that allows computers to be controlled using hand gestures.

Linux.com: www.linux.com. The latest information on news that affects Linux users.

Logbar: <http://logbar.jp/>. Information about the Ring, a wearable input device that can be programmed to control iOS and Android compatible devices.

Microsoft Help and Support: support.microsoft.com. Microsoft's support site includes help topics and tutorials for all Microsoft programs. Downloads and updates are also available.

ooVoo: www.oovoo.com. Web-based video chat and video conferencing software is provided for download.

PCPARTPICKER: <https://pcpartpicker.com/>. Build guides to create your own computer.

PCWorld: www.pcworld.com. Timely product information for PC, Mac, iPod, and iPhone technologies is included on this site. Thousands of products across 33 categories are available for review, comparison, and expert purchasing guidance.

Presto: www.collobos.com. Software that allows users to send images and documents from mobile devices to a printer on a home network.

Projector Central: www.projectorcentral.com. This is a review and information site for projectors.

Shapeways: www.shapeways.com. Shapeways' 3-D printing service enables users to design and sell custom-printed 3-D objects.

ThinPrint Cloud Printer: <http://cloudprinter.thinprint.com/>. An app that allows users to print from all their devices to a cloud printer.

Thunderbolt: <https://thunderbolttechnology.net/>. A site that provides information about Thunderbolt technologies in the News and Blog sections. There is also a Developers section for licensed Thunderbolt developers.

World Community Grid: www.worldcommunitygrid.org. Software download to make any computer part of a scientific research grid that allows the computer to work on research when the CPU is idle.

Xerox Corporation: <http://www.xerox.com/>. A site that provides access to learn about and purchase Xerox products.

WEB RESEARCH PROJECTS

CHAPTER 2

LOOKING AT COMPUTERS: UNDERSTANDING THE PARTS

Discussion Questions

1. Discuss the four main functions of a computer system and how they interact with data and information.

Answers will vary.

A computer is a data processing device that performs four major functions:

1. Input: It gathers data or allows users to enter data.
2. Process: It manipulates, calculates, or organizes that data into information.
3. Output: It displays data and information in a form suitable for the user.
4. Storage: It saves data and information for later use.

Computers are excellent at processing (manipulating, calculating, or organizing) data into information.

2. Discuss the guidelines for choosing the best portable device for personal use.
 - Power: How much computational power do you need?
 - Screen size and resolution: Make sure the quality and size of screen will fit your needs for the years you'll keep the device.
 - Style of keyboard: Do you want a touch-based interface? Is a physical keyboard important, or is an on-screen keyboard sufficient? Does the feel of the keyboard work for you?
 - Battery life: Some devices can operate for 15 hours continuously, others less than 5. Investigate whether the battery can be upgraded and how much weight that would add.
 - Weight: Lighter devices usually cost more. Remember to include the weight of any charging brick you would need to carry when you travel as you consider the tradeoff in price for a lighter device.
 - Number of devices: Is this your only computing device? As technology prices fall, you may be able to have more than one device. You might find an affordable solution that includes both a very mobile device and a second more powerful one.

CHAPTER 2: LOOKING AT COMPUTERS: UNDERSTANDING THE PARTS

Web Project 1: Portable Storage vs. Cloud Storage

Chapter 2 discusses portable vs. cloud storage. If you had to choose between cloud storage and portable storage devices, you would want to research the pros and cons of each to make an informed decision. Write a short essay that compares/contrasts portable and cloud storage. Follow your instructor's directions for proper formatting of your research.

Suggested Keywords

best way to back up computer, best computer backup options, should I use cloud storage or portable, cloud storage options, cloud vs. portable storage

CHAPTER 2: LOOKING AT COMPUTERS: UNDERSTANDING THE PARTS

Web Project 2: Buying a Printer

Imagine you would like to purchase a printer for your personal use at college. Make a chart that compares the features (e.g., portability, size, color, and function) of at least six different printers. What is included in the package price and what costs extra? In addition to the chart, write a short essay that describes the similarities and differences among the different types of printers analyzing your comparison results, and finally discuss which model best meets your needs and why. Follow your instructor's directions for proper formatting of your research.

Suggested Websites (*Use the Suggested Keywords to Search in Following Links*)

Suggested Keywords

types of printers, best printer options, portable printers, highest rated printers, printer features

CHAPTER 2: LOOKING AT COMPUTERS: UNDERSTANDING THE PARTS

Web Project 3: 3-D Printing

One of the most exciting innovations in printing today is the 3-D printer. These 3-D printers are used in marketing, consumer goods, medicine, and so on. Research using the Internet for more information on exactly how 3-D printers work and the most recent uses for them. Write a short paper describing how they work and their uses. Include some ideas of what you think they might be used for in the future. Follow your instructor's directions for proper formatting of your research.

Suggested Keywords

3d printing, what are 3d printers used for, innovative uses for 3d printers, future uses 3d printers, why use 3d printers

CHAPTER 2: LOOKING AT COMPUTERS: UNDERSTANDING THE PARTS

Web Project 4: Buying a Portable Computer

You would like to purchase a portable computer for your personal use. In this chapter, you learned about three categories, cell phones, tablets, and laptops. Assuming that you already own a cell phone, write a paper that describes the differences among tablets and laptops. Use a search engine to help you make a chart that compares the features (e.g., operating system, size, and function) of three tablets and three laptop computers. What is included in the package price and what costs extra? Analyze your comparison results and inform your instructor which model and type best meets your needs and why.

Chapter 2

Looking at Computers:
Understanding the Parts

Understanding Digital Components

- Understanding Your Computer
- Input Devices
- Output Devices

Understanding Digital Components

Objectives

- 2.1 Describe the four main functions of a computer system and how they interact with data and information.
- 2.2 Define bits and bytes, and describe how they are measured, used, and processed.
- 2.3 List common types of computers, and discuss their main features.

Input Devices

Objectives

- 2.4 Identify the main types of keyboards and touch screens.
- 2.5 Describe the main types of mice and pointing devices.
- 2.6 Explain how images, sounds, and sensor data are input into computing devices.

Output Devices

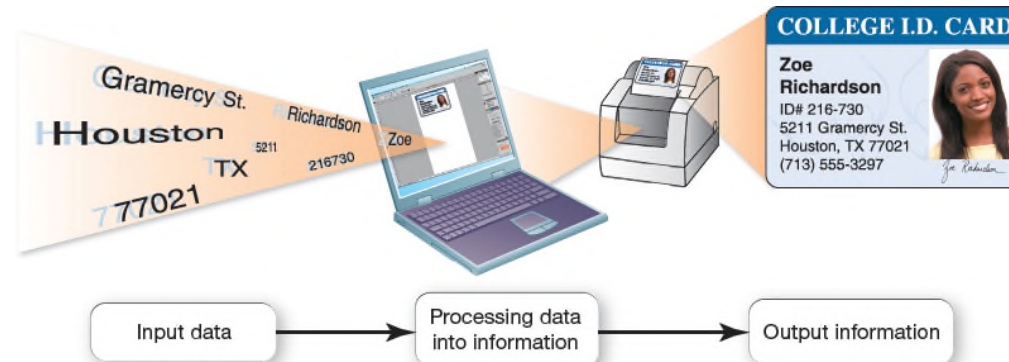

Objectives

- 2.7 Describe options for outputting images and audio from computing devices.
- 2.8 Describe various types of printers, and explain when you would use them.

Understanding Your Computer

Computers are Data Processing Devices (Objective 2.1)

- Perform four major functions
 - Input: Gathers data, allows entering data
 - Processing: Manipulates, calculates, or organizes data
 - Output: Displays data and information
 - Storage: Saves data and information

Understanding Your Computer

Bits and Bytes: The Language of Computers (Objective 2.2)

- Bit

- Binary digit
- 0 or 1

Copyright © 2018, 2017, 2016 Pearson Education, Inc., publishing as Prentice Hall.

- Byte

- Unique combinations of 8 bits of 0s and 1s

- Kilobytes, megabytes, gigabytes, terabytes, and petabytes

Understanding Your Computer

Types of Computers (Objective 2.3)

- Smartphones
- Tablets
- Laptops and their variants
- Choosing a portable device
- Stationary computers

Sean Gallup/Getty Images; Josep Lago/AFP/Getty Images; Ethan Miller/Getty Images; Chris Tzou/Bloomberg/Getty Images; Peter Dazeley/Photographer's Choice/Getty Images

Input Devices

Physical Keyboards and Touch Screens (Objective 2.4)

- Used to enter data and instructions

- Examples

- Keyboard
- Touch screen
- Stylus
- Virtual keyboard

Copyright © 2010, 2011, 2016 Pearson Education, Inc., publishing as Pearson Real

Apple Inc. Used by permission

Input Devices

Mice and Other Pointing Devices (Objective 2.5)

- Mouse
- Touch pad (trackpad)
- Game controllers

Mad Catz, Inc.

Input Devices

Image, Sound, and Sensor Input (Objective 2.6)

- Popular for images
 - Digital cameras
 - Camcorders
 - Mobil device cameras
 - Flatbed scanners
 - Webcams
- Popular for sound
 - Microphone with voice recognition software
- Sensors

Microphone Type	Attributes	Best Used For
Close Talk 	<ul style="list-style-type: none">• Attached to a headset (allows for listening)• Leaves hands free	<ul style="list-style-type: none">• Videoconferencing• Phone calls• Speech recognition software
Omnidirectional 	<ul style="list-style-type: none">• Picks up sounds equally well from all directions	<ul style="list-style-type: none">• Conference calls in meeting rooms
Unidirectional 	<ul style="list-style-type: none">• Picks up sounds from only one direction	<ul style="list-style-type: none">• Recordings with one voice (podcasts)
Clip-on (Lavalier) 	<ul style="list-style-type: none">• Clips to clothing• Available as wireless	<ul style="list-style-type: none">• Presentations requiring freedom of movement• Leaves hands free for writing on white board

Output Devices

Image and Audio Output (Objective 2.7)

- Send data out of the computer in the form of:
 - Text
 - Pictures
 - Sounds
 - Video
- Examples
 - Monitors
 - Printers
 - Speakers and earphones

Output Devices

Image Output (Objective 2.7)

- Types of display screens
 - Liquid crystal display (LCD)
 - Light-emitting diode (LED)
 - Organic light-emitting diode (OLED)
- How they work
 - Pixels
 - Aspect ratio
 - Resolution

YONHAP/EPA/Newscom

Output Devices

Sound Output (Objective 2.7)

- Speaker
 - Output device for sound
 - Surround-sound speakers
 - Wireless speaker systems
- Headphones or earbuds
 - Keep from distracting others

Output Devices

Printers (1 of 2) (Objective 2.8)

- Inkjet

- Affordable
- High-quality color
- Quick and quiet

Tankist276/Shutterstock

- Laser

- Faster printing speed
- Higher-quality printouts
- More expensive

Output Devices

Printers (2 of 2) (Objective 2.8)

- All-in-one printer
 - Printer, scanner, copier, and fax
- Large format printer
 - Prints oversize images
- 3D printer

c

Processing, Storage, and Connectivity

- Processing and Memory on the Motherboard
- Storing Data and Information
- Connecting Peripherals to the Computer
- Power Management and Ergonomics

Processing and Memory on the Motherboard

Objectives

2.9 Describe the functions of the motherboard and RAM.

2.10 Explain the main functions of the CPU.

Storing Data and Information

Objective

2.11 Describe the various means of storing data and information with computing devices.

Connecting Peripherals to the Computer

Objective

2.12 Describe common types of ports used today.

Power Management and Ergonomics

Objectives

- 2.13 Describe how to manage power consumption on computing devices.
- 2.14 Define ergonomics, and discuss the ideal physical setup for using computing devices.

Processing and Memory on the Motherboard

The Motherboard and Memory (Objective 2.9)

- Motherboard
 - CPU
 - ROM, RAM, and cache
 - Slots for expansion cards
 - Sound/Video cards
 - Network interface cards (NIC)

Processing and Memory on the Motherboard

Processing (1 of 2) (Objective 2.10)

- Central Processing Unit
 - CPU or processor
 - “Brains” of the computer
 - Controls all functions of the computer’s components
 - Processes all commands and instructions
 - Billions of tasks per second

Processing and Memory on the Motherboard

Processing (2 of 2) (Objective 2.10)

- CPU Performance Measures

- Processor speed measured in hertz (Hz)

- Megahertz (MHz) or gigahertz (GHz)

- Number of cores

- Single

- Dual

- Quad

- Ten

Copyright © 2018, 2017, 2016 Pearson Education, Inc., publishing as Prentice Hall.

Storing Data and Information

Storage Options on Computing Devices (1 of 4)

(Objective 2.11)

- Local Storage Devices

- Hard disk drive

- Primary storage device
 - Nonvolatile storage
 - Internal drive
 - External hard drive

Mbongo/Fotolia

- Solid-state Drive (SSD)

Storing Data and Information

Storage Options on Computing Devices (2 of 4)

(Objective 2.11)

- Portable Storage Options

- Flash drive
- Flash memory card

Watcharit Nimitsurasri/123RF

Storing Data and Information

Storage Options on Computing Devices (3 of 4)

(Objective 2.11)

- Cloud storage
 - Files stored on the Internet
 - Some amount is free
 - Can purchase additional storage

Storing Data and Information

Storage Options on Computing Devices (4 of 4)

(Objective 2.11)

- Compact discs (CDs)
- Digital video discs (DVDs)
 - Store more data than CDs
- Blu-ray discs (BDs)

Medium Type	Typical Capacity
Blu-ray (dual layer)	50 GB
Blu-ray	25 GB
DVD DL (dual layer)	8.5 GB
DVD	4.7 GB
CD	700 MB

Copyright © 2018, 2017, 2016 Pearson Education, Inc., publishing as Prentice Hall.

Connecting Peripherals to the Computer

Computer Ports (Objective 2.12)

- Thunderbolt
 - Transfer speeds up to 20 Gbps
- Universal serial bus (USB)
 - Transfer speeds of 10 Gbps
- Connectivity port
 - Ethernet port
 - Up to 10,000 Mbps
- HDMI port

Power Management and Ergonomics

Power Controls and Power Management

(Objective 2.13)

- Battery drain
- Power supply
- Sleep mode
- Warm / Cold boot
- Hibernate

Windows 10, Microsoft Corporation

Power Management and Ergonomics

Setting It All Up: Ergonomics (Objective 2.14)

- Ergonomics
- Guidelines
 - Monitor position
 - Adjustable chair
 - Proper position while typing
 - Take breaks
 - Adequate lighting
- Assistive (adaptive) technologies
