

Chapter 02

Freud: Psychoanalysis

1. Describe how Freud's three levels of mental life relate to his concept of the provinces of the mind.

Answer:

A. Freud developed his concept of the unconscious, preconscious, and conscious several years before he formulated the notion of the id, ego, and superego.

B. The unconscious is a dynamic aspect of mental life responsible for many of our behaviors. It consists of both repressed experiences and experiences that have never been conscious. Childhood sexual and aggressive experiences are most likely to be repressed and thus enter into the unconscious in a disguised form.

C. The preconscious consists of experiences that are less threatening than those of the unconscious. Preconscious ideas can become conscious with varying degrees of difficulty, depending on their potential threat to the ego.

D. The conscious mind plays a relatively minor role in Freudian psychology. It refers to those ideas that are in our awareness at any given time.

E. The id is the amoral, animal side of human nature and is completely unconscious. The id serves the pleasure principle.

F. The ego is the sense of "I" or "me" that children develop at an early age. The ego, which can be unconscious, preconscious, or conscious, serves the reality principle.

G. The superego comes into existence after the resolution of the Oedipus complex, and serves both the moral and the idealistic principles. The superego, like the id, is completely unconscious, meaning that its moralistic and idealistic demands are incessant and out of contact with reality.

2. Trace the development of both the male and the female phallic stages and explain why Freud believed that they follow different paths.

Answer:

A. Freud believed that the male and the female phallic stages take different routes because male and female anatomies are different.

B. The male phallic stage begins with the little boy's sexual desire for his mother and hostility for his father—a condition called the male Oedipus complex. Fearing his father's retribution, the boy develops a castration complex, which takes the form of castration anxiety, or a fear of losing his penis. Because castration anxiety is extremely traumatic, the little boy quickly resolves this dilemma by giving up his incestuous feelings for his mother and identifying with his father. His identification with his father leads to him developing a strong male superego—one based on his perception of his father's morals and ideals.

C. The female phallic stage begins with the castration complex, which, for little girls, takes the form of penis envy. Holding her mother responsible for her lack of a penis, the girl turns to her father for sexual love and generates hostility for her mother. This condition, called the female Oedipus complex, is more difficult to resolve than the male Oedipus complex because the girl has no traumatic experience (such as castration anxiety) to shatter it. Gradually, the girl sees the futility of her position and turns to her mother for nonsexual love. The girl's identification with her mother leads to the development of the female superego—a superego based on her perception of her mother's morals and ideals.

3. How does Freud's early therapeutic technique relate to recent reports of childhood abuse?

Answer:

A. Some observers have criticized Freud for abandoning the seduction theory, which placed responsibility for childhood sexual abuse on a parent, usually the father. When Freud substituted the Oedipus complex for the seduction theory, he switched responsibility from the parent to the child.

B. Freud's early therapeutic technique was quite active, forceful, and suggestive. He placed his hands on his patients' heads and told them that they would think of something. This procedure usually led to precisely the result that Freud was looking for, namely, the confession of a childhood seduction.

C. Freud's highly suggestive technique tended to yield stories of childhood seduction that had been repressed for years. Many current therapists, using somewhat different but equally suggestive procedures, have been able to "recover" patients' long-lost experiences of being sexually or physically abused by an older person, often a parent.

4. Freud's psychoanalysis rests on which two cornerstones?

A. sex and aggression B. sex and hunger

- C. security and safety
- D. security and sex

Accessibility: Keyboard Navigation

5. Freud saw himself primarily as a
- A. psychologist.**B.** scientist.
 - C. philosopher.
 - D. writer of fiction.
 - E. general practitioner.

Accessibility: Keyboard Navigation

6. In the context of psychoanalytic theory, identify a true statement about Sigmund Freud.
- A.** He formulated hypotheses after knowing the facts of a case, utilizing the case study approach exclusively.
 - B. He quantified his data and made observations under controlled conditions.
 - C. He made observations on a large sample of patients, most of whom were from the lower class.
 - D. He relied more on rigorous research methods than on deductive reasoning.

Accessibility: Keyboard Navigation

7. Freud's lifelong optimism and self-confidence may have stemmed from
- A.** being his mother's favorite child.
 - B. his father's outstanding business success.
 - C. the death of his younger brother.
 - D. the presence of much older half-brothers.

Accessibility: Keyboard Navigation

8. Since early in his adolescence, Freud had a strong desire to
- A. live in the United States.**B.** win fame by making a great discovery.
 - C. treat the poor and destitute of Vienna.
 - D. practice medicine.

Accessibility: Keyboard Navigation

9. Freud's free association technique evolved from
- A. Charcot's hypnotic technique.
 - B. his use of cocaine.
 - C.** Breuer's cathartic method.
 - D. the periodicity theory of Wilhelm Fliess.

Accessibility: Keyboard Navigation

10. Freud abandoned his _____ theory in 1897, the year after his father died.
- A.** seduction
 - B. Oedipal
 - C. dream
 - D. childhood sexuality
 - E. anal

Accessibility: Keyboard Navigation

11. Which of the following revisions did Freud make to his theory of personality after World War I?
- A.** He laid emphasis on the aggression instinct.
 - B. He identified the three levels of mental life.
 - C. He rejected repression as a defense mechanism to protect the ego.
 - D. He rejected the notion of a female Oedipus complex.

Accessibility: Keyboard Navigation

12. The event that eventually led to Freud's achievement of fame was his
- A. partnership with Jung.
 - B. use of cocaine.
 - C. insistence on the existence of male hysteria.
 - D. marriage to Martha Bernays.
 - E.** publication of *The Interpretation of Dreams*.

13. Which of the following was one of Freud's personal qualities?

- A. a lifelong acceptance and loyalty to the followers who broke away from psychoanalysis
- B. an inability to learn languages other than German
- C. an unromantic and dispassionate disposition, especially toward his close friends
- D. an intellectual curiosity and high moral courage

Accessibility: Keyboard Navigation

14. Freud's three levels of mental life are

- A. the unconscious, the preconscious, and the conscious.
- B. the id, the ego, and the superego.
- C. aim, object, and impetus.
- D. Thanatos, Eros, and the Oedipus complex.

Accessibility: Keyboard Navigation

15. According to Sigmund Freud, which of the following statements is true about unconscious ideas?

- A. They influence behavior only when one is aware of them.
- B. They have no influence on behavior.
- C. They influence behavior even when one is unaware of them.
- D. They are learned only after birth.

Accessibility: Keyboard Navigation

16. Which of these progressions is most consistent with the psychoanalytic theory?

- A. Anxiety leads to repression, which leads to suppression of sexual feelings, which in turn leads to a reaction formation.
- B. Punishment of a child's sexual behavior leads to repression, which leads to anxiety, which in turn leads to suppression of sexual activity.
- C. Punishment of a child's sexual behavior leads to suppression of sexual behavior, which leads to anxiety, which in turn leads to repression.
- D. Anxiety leads to suppression of sexual feelings, which leads to repression, which in turn leads to punishment of sexual behaviors.

Accessibility: Keyboard Navigation

17. Freud's notion of phylogenetic endowment refers to

- A. anatomical differences between the sexes that lead to psychological differences.
- B. the physical structure of the brain where the unconscious is located.
- C. our ancestor's experiences that we inherit and that form a part of our unconscious.
- D. the social rules we learn from our parents that form the superego.

Accessibility: Keyboard Navigation

18. Freud held that ideas in the preconscious originate from

- A. the conscious.
- B. the unconscious.
- C. both the conscious and the unconscious.
- D. None of the answers is correct.

Accessibility: Keyboard Navigation

19. Freud believed that the id

- A. serves the reality principle.
- B. serves the moral or idealistic principle.
- C. constantly seeks to increase pleasure and reduce tension.
- D. is the executive branch of personality.
- E. is reasonable and logical.

Accessibility: Keyboard Navigation

20. According to Sigmund Freud, the id is primarily involved in

- A. solving problems in geometry.
- B. contemplating the meaning of life.
- C. thumb-sucking behavior.
- D. convincing a friend to plant a garden.

Accessibility: Keyboard Navigation

21. Freud claimed that pleasure-seeking people with no thought of what is reasonable or proper are dominated by the A. id. B. ego.
C. superego.
D. ego-ideal.

Accessibility: Keyboard Navigation

22. Freud held that the secondary process functions through the
A. id. B. ego.
C. superego.
D. conscience.
E. ego-ideal.

Accessibility: Keyboard Navigation

23. According to Freud, the ego is
A. conscious only. B. preconscious only.
C. unconscious only.
D. partly conscious, partly preconscious, and partly unconscious.
E. partly conscious and partly preconscious only.

Accessibility: Keyboard Navigation

24. Which of the following is a characteristic of the id?
A. It is changeable. B. It is primitive.
C. It is organized.
D. It is realistic.

Accessibility: Keyboard Navigation

25. Which of the following statements is true about the ego?
A. It is the only region of the mind that houses basic drives or primary motivates. B. It grows out of the superego during infancy.
C. It is the only region of the mind in contact with reality.
D. It is illogical, unrealistic, and can simultaneously entertain incompatible ideas.

Accessibility: Keyboard Navigation

26. According to Freud, which of these region(s) of the mind is (are) in contact with the external world?
A. id. B. ego
C. superego
D. ego and superego
E. id, ego, and superego

Accessibility: Keyboard Navigation

27. According to Sigmund Freud, which of the following statements is true about the superego?
A. It is rational. B. It strives for perfection.
C. It is the executive branch of personality.
D. It strives for pleasure.
E. All of the answers are correct.

Accessibility: Keyboard Navigation

28. Freud believed that the ego begins to evolve from the id soon after birth. While the ego is developing, the id
A. begins to diminish. B. develops parallel to the ego.
C. disappears completely.
D. remains stationary.

Accessibility: Keyboard Navigation

29. Freud believed that the superego develops from the
A. id. B. ego.
C. ego-ideal.
D. conscience.

E. preconscious.

Accessibility: Keyboard Navigation

30. Freud's notion of the superego includes

- A. conscious and preconscious levels.
- B. pleasure and reality principles.
- C. the ego and the id.
- D. a conscience and an ego-ideal.

Accessibility: Keyboard Navigation

31. According to Freud, feelings of inferiority stem from the

- A. id.
- B. ego.
- C. superego.
- D. conscience.
- E. ego-ideal.

Accessibility: Keyboard Navigation

32. According to Freud, a guilt-ridden, timid person is most likely dominated by

- A. the superego.
- B. the ego.
- C. the id.
- D. the Oedipus complex.
- E. phylogenetic endowment.

Accessibility: Keyboard Navigation

33. According to Freud, a psychologically healthy person has a dominant

- A. id.
- B. ego.
- C. superego.
- D. conscience.
- E. ego-ideal.

Accessibility: Keyboard Navigation

34. Identify a true statement about the superego.

- A. It is concerned with, and completely aware of, the practicability of its requirements.
- B. It takes into consideration the difficulties faced by the ego in carrying out its orders.
- C. It is closely watched over by the ego, judging its actions and intentions.
- D. It strives blindly and unrealistically toward perfection.

Accessibility: Keyboard Navigation

35. Freud believed that instincts are characterized by all of the following *except*

- A. depth.
- B. impetus.
- C. source.
- D. aim.
- E. object.

Accessibility: Keyboard Navigation

36. According to Sigmund Freud, which of the following is the object of sexual instinct?

- A. the region of the body in a state of tension
- B. the person or thing that is capable of bringing about sexual pleasure
- C. the amount of force that sexual pleasure exerts on a person
- D. to seek pleasure by removing a state of sexual tension
- E. to seek pleasure by building up a state of sexual tension

Accessibility: Keyboard Navigation

37. According to Sigmund Freud, areas of the body especially capable of producing sexual pleasure are called

- A. aim-impetus areas.
- B. instinct zones.
- C. genital organs.
- D. pleasure-principle areas.

E. erogenous zones.

Accessibility: Keyboard Navigation

38. A young man gets sexual gratification by kissing and caressing women's shoes. According to Freud, which of the following statements best describes this situation?

- A. The sexual object has been displaced.
- B. The sexual aim has been changed.
- C. The path of the sexual instinct is inflexible.
- D. The sexual instinct is permanently inhibited.

Accessibility: Keyboard Navigation

39. According to Freud, a teenager preoccupied with the self and with personal appearance is exhibiting

- A. primary narcissism.
- B. secondary narcissism.
- C. aim-inhibited love.
- D. moral masochism.

Accessibility: Keyboard Navigation

40. According to Sigmund Freud, the nonsexual love a child has for a sibling is called

- A. primary narcissism.
- B. secondary narcissism.
- C. aim-inhibited love.
- D. masochism.

Accessibility: Keyboard Navigation

41. In Freud's aim-inhibited love, that which is inhibited is the

- A. strength of the drive.
- B. overt, open expression of love.
- C. sexual aspect of the instinct.
- D. aggressive aspect of the instinct.

Accessibility: Keyboard Navigation

42. According to Sigmund Freud, the aim of the destructive drive is

- A. self-preservation.
- B. self-assertion.
- C. self-destruction.
- D. self-hatred.

Accessibility: Keyboard Navigation

43. Sigmund Freud defined the term "primary narcissism" as

- A. a condition that accompanies the Oedipus complex but takes different forms in the two sexes.
- B. an unpleasant, nonspecific feeling resulting from the ego's relationship with the external world.
- C. an infant's investment of libido in its own ego.
- D. anxiety that results from the ego's conflict with the superego.

Accessibility: Keyboard Navigation

44. _____ is a condition characterized by the reception of sexual pleasure from suffering pain and humiliation inflicted either by the self or by others.

- A. Neuroticism
- B. Narcissism
- C. Psychoticism
- D. Masochism

Accessibility: Keyboard Navigation

45. Which of the following terms refers to an individual's need for sexual pleasure by inflicting pain or humiliation?

- A. sadism
- B. onanism
- C. masochism
- D. voyeurism

Accessibility: Keyboard Navigation

46. In the context of Freudian dynamic theory, the term "neurotic anxiety" is defined as

- A. an apprehension about an unknown danger that exists in the ego but originates from id impulses.
B. the feeling of being alone and isolated, separated from the natural world.
C. the incompatible tendency to move toward, against, and away from people.
D. a predisposition to act or react in a characteristic manner, that is, in either an introverted or an extroverted direction.

Accessibility: Keyboard Navigation

47. Freud regarded precepts such as "Love thy neighbor as thyself" as
A. reaction formations.
B. worthless relics from an ancient religion.
C. expressions of the erotic drive.
D. expressions of neurotic anxiety.

Accessibility: Keyboard Navigation

48. According to Freud, the apprehension a person feels when physically threatened is _____ anxiety.
A. realistic
B. neurotic
C. masochistic
D. moral

Accessibility: Keyboard Navigation

49. Ashley feels uneasy after violating her personal standards of honesty and cheating on a test. Freud might suggest that she is suffering from _____ anxiety.
A. aim-inhibited
B. realistic
C. neurotic
D. moral

Accessibility: Keyboard Navigation

50. According to Freud, the ego's dependency on the superego results in
A. basic anxiety.
B. realistic anxiety.
C. neurotic anxiety.
D. moral anxiety.
E. traumatic anxiety.

Accessibility: Keyboard Navigation

51. According to Sigmund Freud, which of the following terms refers to the apprehension one feels while in the presence of a teacher?
A. neurotic anxiety
B. psychotic anxiety
C. realistic anxiety
D. moral anxiety
E. none of the answers is correct.

Accessibility: Keyboard Navigation

52. Freud held that the pain of anxiety is most likely to result in
A. psychotic behavior.
B. defensive behavior.
C. neurotic behavior.
D. realistic behavior.

Accessibility: Keyboard Navigation

53. The use of Freudian defense mechanisms requires an
A. expenditure of psychic energy.
B. extremely strong superego.
C. immediate return to primary narcissism.
D. exposure of the superego to prolonged anxiety.

Accessibility: Keyboard Navigation

54. Which of the following is the most basic Freudian defense mechanism?
A. repression
B. reaction formation
C. fixation
D. projection

E. regression

Accessibility: Keyboard Navigation

55. According to Sigmund Freud, which of the following is an important function of repression?

- A. to protect a person against the pain of anxiety
- B. to convert superego functions into ego functions
- C. to protect a person against public disgrace
- D. to convert id functions into ego functions
- E. to convert ego functions into id functions

Accessibility: Keyboard Navigation

56. Which of the following statements is true about anxiety?

- A. It can be felt and produced by both the id and the superego.
- B. It is self-regulating because it precipitates repression.
- C. It is unaccompanied by any physical sensation.
- D. It prevents the ego from being alert for signs of threat and danger.

Accessibility: Keyboard Navigation

57. According to Sigmund Freud, whenever the ego is threatened by undesirable id impulses, it protects itself by _____ those impulses; that is, it forces threatening feelings into the unconscious.

- A. introjecting
- B. projecting
- C. repressing
- D. fixating

Accessibility: Keyboard Navigation

58. A mother who has deep-seated hostility toward her only child but shows overprotection and hyper-concern for the physical well-being of her child illustrates which Freudian defense mechanism?

- A. identification
- B. displacement
- C. projection
- D. reaction formation
- E. sublimation

Accessibility: Keyboard Navigation

59. Madison is frequently berated by his domineering employer. Madison is too timid to confront his employer, but he deflects his frustration by mistreating his dog, children, and wife. According to Freud, this is an example of

- A. reaction formation.
- B. identification.
- C. projection.
- D. displacement.
- E. regression.

Accessibility: Keyboard Navigation

60. Which of the following terms is defined as a Freudian defense mechanism in which unwanted urges are redirected onto other objects or people to disguise the original impulse?

- A. introjection
- B. regression
- C. sublimation
- D. displacement

Accessibility: Keyboard Navigation

61. Which of the following terms is defined as a defense mechanism that arises when psychic energy is blocked at one stage of development, thus making change or psychological growth difficult?

- A. fixation
- B. regression
- C. introjection
- D. repression

Accessibility: Keyboard Navigation

62. Which of the following terms is defined as a defense mechanism whereby a person returns to an earlier stage to protect the ego against anxiety?

- A. sublimation
- B. regression

- C. introjection
- D. fixation

Accessibility: Keyboard Navigation

63. Robin protects herself against the threat of change by constantly clinging to objects and behaviors from her early childhood. It thus appears that Robin is relying primarily on which Freudian defense mechanism?

- A. reaction formation
- B. fixation**
- C. projection
- D. regression
- E. sublimation

Accessibility: Keyboard Navigation

64. Amy, an 18-month-old child, resorts to taking her baby sister's bottle even though she has previously been weaned. This behavior illustrates which Freudian defense mechanism?

- A. stubbornness
- B. fixation
- C. repression
- D. regression**

Accessibility: Keyboard Navigation

65. Seeing deficiencies in others that one unconsciously feels within oneself is an example of which Freudian defense mechanism?

- A. reaction formation
- B. undoing
- C. projection**
- D. isolation

Accessibility: Keyboard Navigation

66. When carried to extremes, which of the following Freudian defense mechanisms can become paranoid behavior?

- A. reaction formation
- B. rationalization
- C. fixation
- D. projection**

Accessibility: Keyboard Navigation

67. A man goes into a gay bar and initiates a fight with a homosexual man as a result of his own unconscious homosexual impulses. This is an example of which Freudian defense mechanism?

- A. sublimation
- B. introjection
- C. fixation
- D. projection**

Accessibility: Keyboard Navigation

68. Which of the following is an example of Sigmund Freud's notion of projection?

- A. "Things will be better tomorrow."
- B. "The only reason I failed is because I had a headache."
- C. "I like him fine, but, for some reason, he hates me."**
- D. "I didn't really want that job, anyway."

Accessibility: Keyboard Navigation

69. Tyler greatly admires his geometry teacher and tries to copy his mannerisms and lifestyle. This is an example of which Freudian defense mechanism?

- A. introjection**
- B. fixation
- C. projection
- D. sublimation

Accessibility: Keyboard Navigation

70. Which of the following distinguishes sublimation from the other Freudian defense mechanisms?

- A. Sublimation is directly related to the superego.
- B. Sublimation is always destructive.
- C. Sublimation is constructive to society.**

D. Sublimation involves the Oedipus complex.

Accessibility: Keyboard Navigation

71. Sigmund Freud saw the resolution of the Oedipus complex as the prototype of

- A. sublimation. **B.** introjection.
- C. projection.
- D. regression.

Accessibility: Keyboard Navigation

72. The transformation of instinctual drives into socially productive forces such as art, science, and religion is what Freud called

- A. regression. B. rationalization.
- C.** sublimation.
- D. acting out.
- E. isolation.

73. The paintings and sculptures of Michelangelo best exemplify Freud's concept of

- A. Thanatos. B. regression.
- C. paranoia.
- D.** sublimation.

Accessibility: Keyboard Navigation

74. Which of the following terms is defined as a defense mechanism whereby people incorporate the positive qualities of another person into their ego?

- A. displacement B. repression
- C.** introjection
- D. sublimation

Accessibility: Keyboard Navigation

75. Which of the following terms is defined as a defense mechanism that involves the repression of the genital aim of Eros and its substitution by a cultural or social aim?

- A. fixation B. introjection
- C. regression
- D.** sublimation

Accessibility: Keyboard Navigation

76. An extreme type of projection is _____, a mental disorder characterized by powerful delusions of jealousy and persecution.

- A.** projection B. sublimation
- C. displacement
- D. fixation

Accessibility: Keyboard Navigation

77. In the context of the infantile period, which of the following occurs during the oral-receptive phase of an infant?

- A. They sometimes take a friendly interest toward their feces, an interest that stems from the erotic pleasure of defecating. **B.** They feel no ambivalence toward a pleasurable object and their needs are usually satisfied with a minimum of frustration and anxiety.
- C. They respond to others through biting, cooing, closing their mouth, smiling, and crying.
- D. They receive satisfaction by destroying or losing objects.

Accessibility: Keyboard Navigation

78. Freud's oral-sadistic stage is characterized by

- A. early attempts at toilet training. B. unambivalent feelings toward the mother.
- C.** the emergence of teeth.
- D. rivalry toward younger siblings.
- E. rivalry toward one or both parents.

Accessibility: Keyboard Navigation

79. The principle source of frustration during Freud's anal phase is
A. weaning.
C. toilet training.
D. suppression of masturbation.

Accessibility: Keyboard Navigation

80. Freud hypothesized that a permissive, accepting attitude of parents during toilet training is likely to lead to which behaviors as the child grows to adulthood?
A. generosity and benevolence
B. stubbornness, compulsiveness, and miserliness
C. masochism and/or sadism
D. sexual dysfunction and aggression

Accessibility: Keyboard Navigation

81. Which of the following is a Freudian term for a person who is characterized by compulsive neatness, stubbornness, and miserliness?
A. hoarding character
B. exploitative character
C. anal character
D. receptive character

Accessibility: Keyboard Navigation

82. The classical Freudian anal character possesses all of the following traits *except* for
A. orderliness.
B. passivity.
C. obstinacy.
D. stinginess.

Accessibility: Keyboard Navigation

83. According to Freud, male and female personality development is
A. similar until the phallic stage.
B. similar until the genital stage.
C. different during the anal stage.
D. different during the oral stage.

Accessibility: Keyboard Navigation

84. Freud's notion of the Oedipus complex is compounded, or made more complicated, by the
A. latency period.
B. bisexual nature of the child.
C. Electra complex.
D. castration complex.
E. influence of culture.

Accessibility: Keyboard Navigation

85. Freud believed that boys and girls have different psychosexual development because of
A. cultural influences.
B. parental attitudes.
C. fantasies that originate soon after birth.
D. anatomical differences between the genders.
E. hormonal differences between the genders.

Accessibility: Keyboard Navigation

86. According to Freud, a boy who feels strong hostility toward his father and sexual love for his mother is experiencing
A. moral masochism.
B. the simple male Oedipus complex.
C. the complete Oedipus complex.
D. the castration complex.
E. penis envy.

Accessibility: Keyboard Navigation

87. Freud claimed that during the Oedipal period, a boy
A. feels sexual love only toward his father. B. feels sexual love only toward his mother.
C. may feel sexual love toward each parent.
D. is incapable of feeling sexual love toward either parent.

Accessibility: Keyboard Navigation

88. According to Sigmund Freud, which of the following statements is true about castration anxiety?
A. It results in penis envy. B. It dissolves the male Oedipus complex.
C. It dissolves the female Oedipus complex.
D. It triggers penis envy, which then dissolves the female Oedipus complex.

Accessibility: Keyboard Navigation

89. According to Freud, normally, in post-Oedipal identification with his father, a boy
A. accepts homosexual feelings toward his father. B. rejects the hated and feared father.
C. wants to be his father.
D. identifies with his father's morals and ideals.

Accessibility: Keyboard Navigation

90. According to Freud, a girl's wish to be a boy or to have a baby
A. indicates feminine identification. B. results from a mature superego.
C. is an expression of penis envy.
D. is called the complete Oedipus complex.
E. is an unnatural condition.

Accessibility: Keyboard Navigation

91. According to Sigmund Freud, which of the following statements is true about castration complex in girls?
A. It shatters the Oedipus complex. B. It takes the form of penis envy.
C. It precedes the Oedipus complex.
D. It takes the form of penis envy and shatters the Oedipus complex.

Accessibility: Keyboard Navigation

92. Freud believed that a little girl's Oedipal wish for a baby is a substitute for the
A. father. B. nipple.
C. feces.
D. mother.
E. phallus.

Accessibility: Keyboard Navigation

93. After the female Oedipus complex is resolved, Freud claimed that it is replaced by
A. the sadistic-anal phase. B. rationalizations.
C. the superego.
D. the wish to be a boy.

Accessibility: Keyboard Navigation

94. Concerning the male and female Oedipus complexes, Freud felt
A. more confident of his views on the female Oedipus complex. B. more confident of his views on the male Oedipus complex.
C. strongly confident of his views on both complexes.
D. little or no confidence with his views on either complex.

Accessibility: Keyboard Navigation

95. Freud suggested that the latency period was rooted in
A. our phylogenetic endowment. B. anatomical differences between the sexes.
C. an increase in psychic energy from the id.
D. decreased activity of the superego.
E. increased activity of the superego.

Accessibility: Keyboard Navigation

96. According to Freud, which of the following statements is true about the genital period in infants?

- A. It ends with the development of the superego.
- B. It is a result of penis envy.
- C. It begins at puberty.
- D. It is marked by an autoerotic sexual aim.
- E. It begins immediately after the anal stage.

Accessibility: Keyboard Navigation

97. In the context of the infantile period, which of the following occurs during the latency period?

- A. Penis envy continues to linger in girls, and the vagina finally obtains the same status for them that the penis had during infancy.
- B. Adolescents give up autoeroticism and direct their sexual energy toward another person instead of themselves.
- C. Children form groups or cliques, an impossibility during the infantile period when the sexual drive was completely autoerotic.
- D. Boys see the female organ as a sought-after object rather than a source of trauma.

Accessibility: Keyboard Navigation

98. From a Freudian perspective, psychological maturity might be characterized by

- A. minimal repression and maximal consciousness.
- B. a maximum number of defense mechanisms.
- C. a heavily repressed id and an overwhelming superego.
- D. minimal libido directed toward others.

Accessibility: Keyboard Navigation

99. Freud gave several reasons why he abandoned his seduction theory. Which of the following was not a reason?

- A. He realized that his highly suggestive therapeutic tactics had elicited false memories of seduction.
- B. The seduction theory had not helped him treat patients.
- C. He realized that the unconscious memories of severely disturbed patients almost never revealed childhood sexual experiences.
- D. He believed that the unconscious mind could not distinguish reality from fiction.
- E. He realized that even his own father was probably guilty of sexually abusing some of his siblings.

Accessibility: Keyboard Navigation

100. Which of the following terms refers to the strong sexual or aggressive feelings, positive or negative, that patients develop toward their analyst during the course of treatment?

- A. surgency
- B. transference
- C. proprium
- D. congruence

Accessibility: Keyboard Navigation

101. Asking a patient to verbalize thoughts, no matter how absurd, irrelevant, or embarrassing, is the Freudian technique of

- A. free association.
- B. displacement.
- C. condensation.
- D. dream analysis.
- E. transference.
